

PSGR Krishnammal College for Women

UGC Certified College of Excellence • Autonomous • Affiliated to Bharathiar University • ISO 9001:2015 Certified • Reaccredited with 'A' Grade by NAAC • Ranked 22nd in NIRF 2019 by MHRD

DEPARTMENT OF BOTANY

CHOICE BASED CREDIT SYSTEM & OUTCOME BASED EDUCATION SYLLABUS

MASTER OF BOTANY (M.Sc Botany)

2019- 2021

PROGRAMME OUTCOMES (POs)

PO 1: To produce graduates with more advanced knowledge and research skills in various disciplines of Botany which are relevant to scientific development and conservation of plant diversity for socio-economic development of the country.

PO 2: To remember, comprehend, apply, analyze, and synthesize the core concepts in botany, like Biodiversity, Structure and function, Evolution, Information flow, exchange, and storage, Pathways and transformations of energy and matter, medicinal plants and their uses, food science and nutrition, forestry, energy and environment management.

PO 3: To Pursue advanced education, research and development, and other creative and innovative efforts in Life science.

PO 4: To define the characteristics of the process of science; practice the skills of the scientific method, engage in research projects and apply quantitative skills to biological problems to understand the ambiguity in science.

PO 5: To understand the relationship between science and society and will apply their skill to evaluate to solve the social problems like conservation and management of environment.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

At the end of the programme, the student will

PSO1: Gain advanced knowledge in various disciplines to analyze, and synthesize the core concepts in Botany.

PSO2: Be well equipped to pursue research and development in Life science.

PSO3: Secure jobs in the field of Education and in Institutes and Industries that require scientific thinking and critical problem solving skills.

PSO4: Apply the skills gained in Botany and apply the same for socio-economic development of the Country

Preamble

To make the students understand the importance of experimental analysis, scientific approach in solving problems related to the environment and society and to educate and train the students to write scientific papers.

Execution procedure for the allotment of students for the Project

Project students are assigned through lot system. Students are listed out based on their marks scored in the end semester examinations and segregated as student with distinction (Group 1) and below distinction (Group 2). Staff members are allowed to choose the project students from both the groups by lot system. Projects allotted based on the interest of the students.

Execution of research

*The research work can be carried at the department or any other organization approved by the staff coordinator and the Head of the Department.

*One review meeting will be conducted in-between to monitor the progress of the research.

*Viva voce examination will be conducted by external examiner and the staff co-ordinator guiding the project.

Area of work

Taxonomy, Anatomy, Embryology, Physiology, Cytogenetics, Genetic engineering, Seed technology, Biotechnology, Microbiology, Enzyme technology, Bioremediation, Solid waste management, Organic Farming, Tissue culture & Medicinal Botany.

Methodology

Each project should contain the following details

- Brief introduction about the topic
- Review of literature
- Materials and Methods
- Experimental Results and Discussion – evidences in the form of figures, tables, graphs and photographs can be enclosed.
- Summary
- References

The above content should not exceed 100 pages.

Evaluation of the Project

Relevance of the topic to the academic / society	- 10 marks
Objectives	- 10 marks
Experimental design	- 30 marks

Expression of results and discussion

- 30 marks

Total

- 80 marks

**Viva voce: -
Discussion**

Presentation - 10 marks
- 10 marks

Total

= 20 marks

Total

= 100 marks

Question paper pattern for PG

For CA1 &CA2

Bloom's category	Section	Marks	Writings	Total
K1,K2	A -5x2marks	10	1or2 sentence	50 marks
K3,K4	B- 4*5 marks (no choice)	20	250 words	
K5,K6	C – 2 out of 3 *10 marks	20	500 words	

For model and End Semester Exam

Bloom's category	Section	Marks	Writings	Total
K1,K2	A -10x3marks	30	1or2 sentence	100
K3,K4	B- 6 out of 7 6 marks	36	250 words	
K4,K5	C-3 out of 5 8 marks	24	400 words	
K5,K6	D - 1x10 (no choice)	10	600 words	

Question paper pattern for IDC/Research methodology

Section A: Short answer type (5x5 = 25 marks)

One questions from each unit; either or type

Section B: Essay type answer (5x15 = 75 marks)

One questions from each unit; either or type

Question paper pattern for ALC (For CA)

Bloom's category	Section	Marks	Writings	Total
K3, K4	A – 4 out of 6 *4marks	16 marks	250 words	25 marks
K4,K5	B – 1 out of 2 *9 marks	9 marks	500 words	

Question paper pattern for ALC (For model & ESE)

Bloom's category	Section	Marks	Writings	Total
K3, K4	A – 5 out of 8(open choice)*5marks	25 marks	250 words	75 marks
K4,K5	B – 5 out of 8(open choice)*10 marks	50 marks	500 words	

Component of continuous assessment

CA test : 10 marks
Model : 15 marks
Total : 25 marks

Question paper pattern for Cybersecurity

This course will be offered in Semester III for the PG Programmes - M.Sc(Maths), M.Sc(Chemistry- Aided & SF), M.Sc(Botany),M.Sc(Physics),M.Com,M.A(History), M.A(English)from 2015 - 16 batch onwards. The course will be conducted for 2 Hrs/Week and does not carry any credits. There will be only internal evaluation for this paper. Two internal tests will be conducted for 2 Hrs duration and for a Maximum of 40 marks.

Test portions:

Test I - Unit I and II

Test II - Unit III, IV and V

Question paper Pattern:

Section A: Answer in Two Sentences

2 marks x 5 (5 out of 8 Questions) - 10 marks

Section B: Answer in one page

5 marks x 6 (6 out of 8 Questions) - 30 marks

Total - -----
40 marks

Internal Marks Evaluation:

Tests (2 x 40 marks) - 80 marks

Quiz - 10 marks

Assignment - 10 marks

Total - 100 marks

The marks will be converted to grades. The conversion of Marks to Grade points and Letter Grade is to be followed as per curriculum design 2016-17.

RUBRICS

Assignment/ Seminar

Maximum - 20 Marks (converted to 4 marks)

Criteria	4 Marks	3 Marks	2 Marks	1 Mark
Focus Purpose	Clarity	Shows awareness	Shows little awareness	No awareness
Main idea	Clearly presents a main idea.	Main idea supported throughout	Vague sense	No main idea
Organization: Overall	Well planned	Good overall organization	There is a sense of organization	No sense of organization
Content	Exceptionally well presented	Well presented	Content is sound	Not good
Style: Details and Examples	Large amounts of specific examples and detailed description	Some use of examples and detailed descriptions	Little use of specific examples and details	No use of examples

CLASS PARTICIPATION

Maximum - 20 Marks (converted to 5 marks)

Criteria	5 Marks	4 Marks	3 Marks	2 Marks	1 Mark	Points scored
Level of Engagement in Class	Student proactively contributes to class by offering ideas and asks questions more than once per class.	Student proactively contributes to class by offering ideas and asks questions once per class	Student contributes to class and asks questions occasionally	Student rarely contributes to class by offering ideas and asking no questions	Student never contributes to class by offering ideas	
Listening Skills	Student listens when others talk, both in groups and in class. Student incorporates or builds off of the ideas of others.	Student listens when others talk, both in groups and in class.	Student listens when others talk in groups and in class occasionally	Student does not listen when others talk, both in groups and in class.	Student does not listen when others talk, both in groups and in class. Student often interrupts when others speak.	
Behavior	Student almost never displays disruptive behavior during class	Student rarely displays disruptive behavior during class	Student occasionally displays disruptive behavior during class	Student often displays disruptive behavior during class	Student almost always displays disruptive behavior during class	
Preparation	Student is almost always prepared for class with required class materials	Student is usually prepared for class with required class materials	Student is occasionally prepared for class with required class materials	Student is rarely prepared for class with required class materials	Student is almost never prepared for class.	
					Total

MPL1701	Paper I - Plant Diversity	CORE	71	4	--	5

Preamble

To understand the diversity and their distribution

To study the evolution of plants.

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO Number	CO Statement	Knowledge Level
CO1.	Classification of different plant forms	K2
CO2.	To understand the relationship among Algae, Fungi, Bryophytes, Pteridophytes and Gymnosperms	K2
CO3.	Understand the life pattern of plants	K3
CO4.	Able to identify the plants	K4
CO5.	Distinguish different fossilized life forms with that of the present plants	K5

Syllabus

Unit: I Phycology

14hrs

Classification of algae by Fritsch 1945. Structural organization, Reproduction and Phylogeny of Chlorophyceae, Xanthophyceae, Chrysophyceae, Phaeophyceae, Rhodophyceae and Myxophyceae. Algae in Biotechnology- Industrial, Nutraceutical and bioactive/Pharmaceutical.

Unit: II Mycology and Plant pathology

14 hrs

Classification of Fungi by Alexopoulos and Mims, (1979). Salient features, Reproduction and Life cycle of Myxomycetes, Oomycetes, Ascomycetes and Basidiomycetes. Application of fungi – Industry, Agriculture and Forestry. Classification of plant diseases based on symptoms. Host - pathogen interaction, Defense mechanism.

Unit: III Bryology

14 hrs

Classification - Reimers (1954). Structural organization of the gametophyte, sporophyte, methods of spore dispersal in Hepaticopsida, Anthocerotopsida and Bryopsida Bryophytes as pollution indicators.

Unit: IV Pteridology

14 hrs

Classification - Sporne (1966). Comparative Morphology, Reproduction and Life cycle of Lycopsidea, Sphenopsida, Pteropsida. Heterospory and seed habit.

Unit: V Gymnosperms

15 hrs

Classification of Gymnosperms by Sporne (1965). General account of Coniferales Taxales, Ginkgoales and Gnetales including fossils –*Williamsonia*, *Heterangium*, *Lagenostoma*, *Pentoxylon* and *Cordaites*.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1702	Paper II - Anatomy, Embryology and Tissue Culture	Core	71	4	-	5

Preamble

- knowledge on Anatomy
- Predict anomalous growth into normal plant anatomy
- Compare dicot and monocot embryology
- Knowledge on tissue culture

Course Outcomes

On the successful completion of the course, students will be able to

COs	CO Statement	Knowledge Level
CO1	Illustrate the internal structure of plant tissue	K2
CO2	Interpret anomalous secondary growth in plants	K3
CO3	Critically analyze the embryological process in plants	K3
CO4	Appraise the knowledge of tissue culture	K4
CO5	Apply tissue culture techniques to conserve plants	K5

Syllabus

Unit: I

14 hrs

Introduction to meristems and its derivatives. Cytological characteristics and growth pattern of meristem. Epidermal tissue system – trichomes, glands, Stomata. Secretory tissues- nectaries and laticifers. Detailed structure of Vascular cambium, Secondary Xylem-Xylem rays, ray tracheids, wood parenchyma, tyloses, sap and heart wood, false annual rings, ring porous and diffuse porous wood, Compression wood and Secondary phloem, Phylogenetic specialisation.

Unit: II

14 hrs

Nodal anatomy., Periderm-Structure, morphology, Function and Lenticels, Anomalous secondary thickening in dicots- Achyranthus, Aristolochia, Bignonia, Leptadaenia, Mirabilis, Piper and arborescent monocots-Dracena

Unit: III**14 hrs**

Microsporogenesis. Male gametophyte - structure, pollen wall morphogenesis and chemistry. Pollen-stigma interaction and incompatibility. megasporogenesis, Embryo sac structure and types - monosporic, biosporic and tetrasporic. Fertilization and its control, parthenocarpy endosperm - types and haustoria. Structure and development of dicot embryo – *Ceratocephalus falcatum*, monocot embryo – *Najas lacerata*, anomalous embryo development – *Triticum*.

Unit: IV**14 hrs**

Tissue and cell culture techniques: Types of media, preparation of Murashige and Skoog medium, macro and micro nutrients, Growth hormones. Explant culture: Selection of explants, preparation of explants for inoculation. Callus production, micropropagation. Organ culture- meristem culture, anther and pollen culture and embryo culture. Cell culture techniques and its applications.

Unit: V**15 hrs**

Protoplast culture -somatic hybridisation, somatic embryogenesis and artificial seed production. Somaclonal variation and its applications. Cryopreservation techniques. Application of tissue culture in the field of Agriculture, forestry and horticulture.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1703	PAPER-III- Applied Microbiology	Core	71	4	--	5

Preamble

- To understand the use of microbes at industrial level.
- Application of microbes for environmental aspects.

Course Outcomes

On the successful completion of the course, students will be able to

COs	CO Statement	Knowledge Level
CO1	Identify the microbes and to preserve microbes	K2
CO2	Understand the fermentation technology and its application	K3
CO3	Know the application of microbial products at pharmaceutical level	K4
CO4	Use microbes for biofertilizers	K5
CO5	Apply microbes to clean the polluted environment	K5

S- Strong; M-Medium

Syllabus

Unit I: Introduction to microbiology

14 hrs

History and scope of Microbiology- study of microbial structure: Microscopy and specimen preparation, Preservation of microbes- freeze drying(lyophilisation); outline of microbial diversity – Archaea, Gram Bacteria (Non Proteobacteria and Proteobacteria) Gram positive bacteria (Low G+C gram positives, High G+C Gram positives) Fungi, Slime molds and water molds, algae and protozoa.

Unit II : Industrial microbiology

14 hrs

Upstream process –Fermentation, Media for industrial fermentation, principles of microbial growth and culture systems, solid substrate fermentation. Fermentors- Principle, Mode of operation, Types of fermentors – Conventional fermentor, Continuous stirred tank fermentor, Airlift fermentor,

Packed bed fermentor and Photobioreactor. Downstream process –Solid-liquid separation, Release of intracellular products, Concentration, Purification and Formulation.

Unit III

14 hrs

Microbial products and its uses: Production, harvest, recovery, uses and mode of action of enzymes- lipase and amylase; Pharmaceutical products: Antibiotics-Streptomycin; Vitamins B2; Ethanol and Probiotics. Therapeutic proteins– Insulin. Mass culture and utilization of bacteria as SCP.

Unit IV : Agriculture microbiology

14 hrs

Microbes as Bio-fertilizers. Nitrogenous Biofertilizers, PGPR, Solid Waste - Biomanure technology, Effective microorganisms (EM), Vermicomposting, Bio-pesticides, Edible Mushroom production.

Unit V : Environmental Microbiology

15 hrs

Pollution microbiology- Biodeterioration of paper, textiles and wood microbes in Bioremediation - Oil Spills, Super Bugs, microbes in mining, ore- leaching, oil recovery. Biodegradation of xenobiotics.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1704	Paper- IV – Cell Biology and Genetics	Core	71	4	-	5

Preamble

- To differentiate the structure and functions of both prokaryotic and eukaryotic cell organelles and cell membrane
- To distinguish the basic processes of cell signaling and signaling pathways
- To differentiate the Mendelian inheritance with non-Mendelian inheritance patterns.
- To detect the mutation types and causes, and identify the structural and numerical changes of chromosomes.
- To examine the different types of gene transfer mechanism and genome variation role in health and disease.

Course Outcomes

On the successful completion of the course, students will be able to

COs	CO Statement	Knowledge Level
CO1	Differentiate Structure and functions of cell organelles and cell membrane	K2
CO2	Relate the cell signalling pathways and cell communication	K3
CO3	Compare and contrast the mendelian inheritance with non-Mendelian inheritance	K4
CO4	Classify the mutation types, structural and numerical alterations of chromosomal implication	K5
CO5	Compare the horizontal and vertical gene transfer mechanism and genetic disorders	K5

Mapping with Programme Outcomes

Syllabus

Unit – I

14 hrs

Structural organization and function of cell organelles - cell wall, nucleus, mitochondria, ER, golgibodies, chloroplast, lysosomes, peroxisomes, vacuoles, structure and function of cytoskeleton and its role in motility. Membrane structure and function – lipid bilayer, ion channels, membrane pumps, intracellular transport, electrical properties of membrane. Cell division and cell cycle. Organization of genes and chromosomes – unique and repetitive DNA, interrupted genes, structure of chromatin and chromosomes, transposons.

Unit – II

14 hrs

Cell signalling: Hormones and their receptors, cell surface receptor, signalling through G-protein coupled receptors, signal transduction pathways, second messengers, regulation of signalling pathways, bacterial and plant two-component signalling systems.

Unit – III

14 hrs

Cellular communication: general principles of cell communication, cell adhesion and roles of different adhesion molecules, gap junctions, extra cellular matrix, neurotransmission and its regulation.

Cancer: oncogenes, tumor suppressor genes, cancer and the cell cycle, virus induced cancer, metastasis.

Unit – IV

14 hrs

Mendelian Genetics- Mendelian Principles and gene interaction; Multiple alleles – ABO blood group, MN blood group, Rh factor; sex limited and sex influenced characters; Linkage and crossing over, linkage maps. Inheritance of mitochondrial and chloroplast genes, maternal inheritance. Mutation – types, causes and detection, structural and numerical alterations of chromosomes and their genetic implications.

Unit – V

15 hrs

Microbial genetics: Methods of genetic transfers – transformation, conjugation, transduction and sex-duction. Gene mapping, mapping genes by interrupted mating, fine structure analysis of genes. Recombination- homologous and nonhomologous recombination. Human genetic disorders. Population genetics – gene pool, gene frequency, Hardy -Weinberg equilibrium- factors affecting the equilibrium, genetic drift.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1705	Paper V - Plant Physiology	CORE	71	4	-	5

Preamble

- To know the structure and function of plant organelles
- To obtain knowledge on various metabolic processes in plants
- To study the role of growth hormones to maintain the life of plants
- To understand the physiology of plants under stress condition.

Course Outcomes

On the successful completion of the course, students will be able to

COs	CO Statement	Knowledge Level
CO1	Understand the structure and function of plant organelles	K2
CO2	Understand the symbiotic relationship between plants and microbes	K2
CO3	Interpret lipid metabolism with the physiological function	K3
CO4	Application of growth hormones to regulate the life cycle of plants	K4
CO5	Apply various stress factors to produce stress resistant plants	K5

Mapping with Programme Outcomes

CO2	S	S	S	M	S
CO3	M	S	M	S	S
CO4	S	M	S	M	S
CO5	S	M	M	S	S

S- Strong; M-Medium

Syllabus

Unit I

14 hrs

Carbon metabolism- Photosynthetic apparatus, Photosynthetic pigments and absorption of light energy, Fluorescence and Phosphorescence, Quantum requirement and Quantum yield. Red drop and Emerson's enhancement effects. Two pigment system, Action spectrum, Light and dark reactions, Hatch slack pathway. Differences between C₃ and C₄ plants. Photorespiration and Glycolate metabolism (C₂- cycle), Chemosynthesis. Breakdown and Synthesis in Sucrose, Starch and Cellulose.

Unit II**14 hrs**

Nitrogen metabolism-Nitrogen in plants, Sources of nitrogen to plants. Conversion of nitrate into Ammonia, biological Nitrogen fixation, Mechanism of Biological Nitrogen fixation, Biosynthesis of Amino acids. Synthesis of Proteins in plants.

Unit III**14 hrs**

Lipid metabolism- Fats, distribution in plants, Breakdown of fats, Oxidation of glycerol, Breakdown of fatty acids- α -oxidation, β - oxidation. Glyoxylate cycle, significance. Fat synthesis- synthesis of Glycerol, synthesis of Fatty acids, Condensation of Fatty acids and Glycerol. Phospholipids.

Unit IV**14 hrs**

Growth and Movements: Natural growth hormones in plants- physiological effects and Biosynthesis of Auxins, Gibberellins, Cytokinin and Ethylene. Morphactins. Photoperiodism – Photoperiodism, photoperiodic induction and Phytochrome. Vernalisation- perception of the cold stimulus, presence of a floral hormone. Conditions necessary for vernalization. Mechanism, Devernalization. Senescence in plants–Programmed Cell Death (PCD), Abscission of Leaves, Circadian rhythm and biological clock

Unit V**15 hrs**

Stress Physiology: Introduction, water deficit and drought resistance in xerophytes and mesophytes. Salt stress and salt resistance. Cold injury and cold resistance, High temperature (Heat) stress in higher plants. Heavy metal stress in plants, Biotic resistance in plants. Dormancy – Factors causing dormancy, Secondary dormancy, Artificial methods of breaking the dormancy of seeds and advantages of dormancy of seeds.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1706	Paper VI – Biochemistry	CORE	71	4	--	5

Preamble

- To gain a comprehensive idea of bioenergetics and the role of enzymes in regulation of cellular activity
- To understand the biological and economic importance of carbohydrates
- To grasp the biological significance of proteins
- To discern and appreciate the functions of lipids
- To realize the magnitude of immunological implications

Course Outcomes

On the successful completion of the course, students will be able to understand the following

COs	CO Statement	Knowledge Level
CO1	Apply the knowledge of thermodynamics in biochemical reactions	K2
CO2	Interpret the structure and functions of carbohydrates in living systems	K3
CO3	Analyze and appraise the role of proteins in biological systems	K4
CO4	Categorize and deduce the effects of lipids in biological systems	K5
CO5	Reconstruct immunological events	K5

Mapping with Programme Outcomes

CO1	S	S	S	S	S
CO2	S	S	M	M	S
CO3	S	S	M	S	S
CO4	S	S	M	M	S
CO5	S	M	M	S	S

S- Strong; M-Medium

Syllabus

Unit I

14 hrs

Carbohydrates- Importance, structure and classification of monosaccharides, oligosaccharides and polysaccharides. Monosaccharides - Structure of glucose, reaction of monosaccharides - Esterification, oxidation, reduction reactions, derivatives of monosaccharides. Oligosaccharides- Maltose, sucrose, lactose. Polysaccharides- Cellulose, starch, glycogen, chitin and glycoproteins.

Unit II

14 hrs Proteins-

General structure- Amino acid structure, classification and properties. Structure of proteins - Primary, secondary, tertiary and quaternary structure, properties of proteins, denaturation. Classification of proteins- based on functions, based on chemical nature and solubility, and based on nutrition. Important structural proteins- keratins, collagens. Important functional proteins- antibodies, ribonuclease.

Unit III**14 hrs**

Lipids – Classification and functions, Fatty acids – Saturated, unsaturated, Nomenclature, essential fatty acids; Triacylglycerols- properties. Test to check purity of fat and oils, Phospholipids- types and functions, Glycolipids- cholesterol- structure and occurrence, properties, functions, hypercholesterolemia, Lipoproteins- structure and classification, conversion of VLDL to LDL, HDL, metabolism of HDL, disorders of plasma lipoproteins, fatty liver, lipotropic factors, obesity, Steroids and Amphipathic lipids.

Unit IV**14 hrs**

Enzymes- Nomenclature, classification and properties, Enzymes as catalyst, enzyme specificity, Michaelis-Menton constant, mechanism of enzyme catalysis, factors affecting enzyme activities, enzyme regulators and inhibitors. Allosteric enzymes. Ribozymes.

Unit V**15hrs Bioenergetics-**

Concept of energy, Thermodynamic principles in biology, Concepts of entropy, enthalpy, free energy and standard free energy, ATP as energy currency of the cell. Interconversion of adenine nucleotides.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1707	Paper-VII- Molecular Biology	CORE	71	4	--	5

Preamble

- To obtain in depth understanding of the organization of the genetic material in prokaryotic and eukaryotic cells.
- To gain a comprehensive idea of transcription in prokaryotes and eukaryotes
- To grasp the significance of genetic code and translation
- To discern and appreciate post translational modification of proteins
- To realize the magnitude of developments in nanotechnology

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO Number	CO Statement	Knowledge Level
CO1	Understand the process of DNA replication	K2
CO2	Apply the knowledge of transcription and translation processes	K3
CO3	Investigate and question the experimental conclusions	K4
CO4	Experiment in nanobiotechnology	K5

Mapping with Programme Outcomes

CO2	S	S	M	M	S
CO3	S	S	M	S	S
CO4	S	S	M	M	S

S- Strong; M-Medium

Syllabus

Unit-I

14 hrs

DNA- structure – types; DNA replication, repair and recombination : Unit of replication, enzymes involved, replication origin and replication fork, fidelity of replication, extrachromosomal replicons, DNA damage and repair mechanisms, homologous and site-specific recombination.

Unit-II

14 hrs

RNA synthesis and processing: structure and function of different types of RNA. Transcription in prokaryotes & eukaryotes - factors and machinery, formation of initiation complex, transcription activator and repressor, RNA polymerases, capping, elongation, and termination, RNA processing, RNA editing, splicing and polyadenylation, RNA transport.

Unit-III**14 hrs**

Translation in Prokaryotes - Regulation of gene activity in prokaryotes: Operon concept- trp operon & Lac operon. Translation in eukaryotes: Ribosome, formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, genetic code, aminoacylation of tRNA, tRNA-identity, aminoacyl tRNA synthetase, and translational proof-reading, translational inhibitors.

Unit IV**14 hrs**

Protein transport and processing: Post- translational modification of proteins. Protein sorting – Transport of proteins into chloroplast, mitochondria, endoplasmic reticulum and nucleus. Protein targeting and protein degradation.

Unit- V**15 hrs**

Nanobiotechnology: Introduction to nanoscale materials: Bucky ball, carbon nanotubes and nanowires. Synthesis and characterization of nanoparticles from biological sources: Active nanoparticles from microbes and plants. *Applications of nano in biology and current status of nanobiotechnology.

Text Books

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1708	Elective I–Paper VIII-Basics of Horticulture	CORE	56	4	--	4

Preamble

- To learn the fundamental aspects of horticulture
- To learn the soil physical, chemical and biological properties and their impact on growth of plants
- To know the Nursery techniques
- To learn the techniques of fruit and vegetable cultivation and post harvest management

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO Number	CO Statement	Knowledge Level
CO1	The fundamental aspects of horticulture	K2
CO2	The soil physical, chemical and biological properties and their impact on growth of plants	K2
CO3	Nursery techniques	K3
CO4	Techniques of vegetable cultivation and post harvest management	K3
CO5	Techniques of fruit cultivation and post harvest management	K3

Mapping with Programme Outcomes

CO3	M	S	M	S	S
CO4	S	M	S	M	M
CO5	S	M	S	M	M

S- Strong; M-Medium

Syllabus

Unit I Basic concepts of horticulture

11 hrs

Scope and importance – Global scenario of horticultural crops- Divisions of horticulture - area and production – export and import - classification of horticultural crops – Nutritive value of horticultural crops – horticultural therapy – Horticulture Zones of India and Tamil Nadu .

Unit II Soil and climatic factors on crop production

11 hrs

Influence of soil – physical and chemical properties and climatic factors – light, temperature, photoperiod, relative humidity, rainfall, micro climate, pollution – influence of biotic and abiotic stresses on crop production.

Unit III Nursery techniques**11 hrs**

Nursery techniques Establishment of nursery, selection of site, methods of production, seeds, cutting, layering, budding, tissue culture. Principles and methods of pruning and training of horticultural crops– Management of nursery, Hydroponics.

Unit IV: Vegetable Cultivation**11 hrs**

Vegetable production in nutrition garden, kitchen garden, truck garden, market garden, roof garden, floating garden – types of vegetable farming and contract farming- rice fallow cultivation, river bed cultivation, rain fed cultivation, organic farming, vermicomposting, export standards of vegetables.

Unit V Orchards**12 hrs**

Planting systems – planning, layout and management of an orchard- after-cultural practices – clonal orchards- use of growth regulators – water management – drip and fertigation - weed management - nutrient management - soil fertility management - cropping systems - intercropping - multi-tier cropping, post harvest processing and value addition, storage and marketing of horticultural produce.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1709	Elective-I – Paper IX- Bioinformatics	Elective	56	4	-	4

Preamble

- To develop the knowledge about the information and applications of databases.
- To operate the algorithm and alignment type software tools
- To perform sequence alignment between two nucleotide or amino acid sequences and find out structural or functional similarity.
- To construct the phylogeny tree
- To categorise the genome diversity by gene identification and gene prediction.
- To identify the protein expression and function in a genome.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Differentiate nucleic acid and protein databases and their formats	K2
CO2	Identify the regions of similarity	K2
CO3	Inferred the homology and the evolutionary relationships between the sequences studied.	K2
CO4	Generate the evolutionary tree	K5
CO5	Identify the gene annotation	K4
CO6	Compare the protein structure and function	K6

Mapping with Programme Outcomes

CO4	S	M	S	S	M
CO5	M	M	M	S	L
CO6	S	S	M	M	S

S- Strong; M-Medium

Syllabus

UNIT I

11 hrs

Different types of nucleic acid and protein databases and data retrieval - Introduction to bioinformatics. Classification of biological databases. Biological data formats. Application of bioinformatics in various fields. Introduction to single letter code of amino acids, symbols used in nucleotides, data retrieval systems – *Entrez* and SRS.

UNIT II

11 hrs

Sequence alignment algorithms: Pairwise alignment - Local and Global alignment. Methods of alignment: dot plot; dynamic programming algorithm -Needleman and Wunsch algorithm, Smith-Waterman algorithm.

Database searches for homologous sequences - FASTA and BLAST. Sequence filters. **Statistics of alignment score and scoring matrices** – PAM and BLOSSUM.

UNIT III

11 hrs

Multiple sequence alignment – Methods of multiple sequence alignment -. Profiles, PRINTS, BLOCKS, PRINTS, PRODOM, PFAM. Progressive alignment – Clustal W, T-Coffee. Iterative Alignment method. Evaluating multiple alignments. Application of multiple sequence alignment.

Phylogeny: Phylogenetic analysis, Definition and description of phylogenetic trees and various types of trees, Method of construction of Phylogenetic trees [distance based method (UPGMA), Maximum Parsimony.

UNIT IV

11 hrs

Genomics– Functional genomics- Introduction of transcriptomics, proteomics, metabolomics. **Comparitive genomics-** Bacterial, Yeast, *Arabidopsis thaliana*. Gene identification and prediction: Basis of gene prediction, codon bias; pattern identification **Annotation of Genome:** structural annotation – gene prediction approaches – Open Reading Frame (ORF) prediction – Hidden Markov Model – Pattern identification – Prediction of promoter sequences. Functional annotation – prediction of gene function.

UNIT V

12 hrs

Introduction to Proteome - Proteome and technology. Primary attributes for protein identification - protein species of origin, Protein isoelectric point, Protein mass, aminoacid composition, Protein N- and C-terminal sequence tags and cross species protein identification. Modifications that influence protein change on 2-D PAGE - Detection and analysis of co- and post-translational modification.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MCP14A1	IDC –Clinical Microbiology & Biochemistry	IDC	60	-	-	4

Preamble

- To enable the students to understand the principles of clinical chemistry
- To gain the importance of hypertension and hypotension
- To enable the students to understand the principles and the concepts underlying clinical laboratory tests in clinical chemistry
- To differentiate the blotting technique and vaccination types
- To acquire knowledge on basic mechanisms involved in the causation and treatment of common disease and their influence on clinical presentation and therapy

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Differentiate the clinical specimens	K ₃
CO2	Classify the composition of blood, Perform analysis of chemical analytes in blood and other body fluids	K ₂
CO3	Calculate the test results and convert them to form meaningful in patient assessment	K ₃
CO4	Compare and contrast the different types of blotting techniques and vaccination.	K ₄
CO5	Correlate laboratory results with infectious diseases processes	K ₆

Syllabus

Unit I

(12 Hrs)

Cinical microbiology: Clinical specimens –Collection- needle aspiration, Incubation, Catheter; handling, transport. Isolation of microbes from specimens-selective media, differential media, enrichment media, characteristic media. Identification of microbes (virus, bacteria, fungi and parasites) through morphological and biochemical characteristics.

Unit II

(12 Hrs)

Principles of clinical biochemical analysis: Basis of analysis of body fluids for diagnostic prognostic and monitoring purposes. Blood Analysis: Composition of blood, blood grouping & matching, physiological function of Plasma protein, role of blood as oxygen carrier, blood pressure - Hypertension & hypotension, coagulation of blood, Anaemia – causes & control .Urea determination- the urease method, estimation of bile pigment in serum, estimation of total protein in serum, estimation of total proteins and albumin based on biuret method and BCG method.

Unit III

(12Hrs)

Clinical Chemistry: Determination of Glucose in Serum by Folin & Wu's method, Determination of Serum Cholesterol - Sackett's method for total cholesterol. Diagnostic test for Sugar in Urine. Test for salt in Serum, Test for Chlorides. Detection of Cholesterol in Urine, Detection of Diabetes . Typical reference ranges for biochemical analyst Viz, sodium, potassium, urea, creatinum, AST, ALT, AP and cholesterol and their significance. Biological role of sodium, potassium, calcium, iodine, copper and zinc.

Unit IV

(12Hrs)

Electrophoresis, Blotting and Vaccination : Principles, Techniques: southern, western and northern blotting. Vaccines and immunizations: Active immunization, passive immunization, Type of vaccines-whole organism vaccines, purified macromolecules as vaccines, Recombinant –vector vaccines, DNA vaccines.

Unit V

(12 Hrs)

Common Diseases & their treatments: Insect borne diseases: Malaria, Filarisis & Plague.

Air Borne diseases: Diphtheria, Whooping cough, Influenza, Measles mumps, Tuberculosis, Water borne diseases: Cholera, Typhoid, & Dysentery. Common disease of the digestive system- jaundice, respiratory system- asthma, nervous system- epilepsy. Some other common diseases-piles, leprosy. First aid for accidents. Common poisons & their antidotes - acid poisoning, alkali poisoning, Poisoning by disinfectants hallucinogens. Toxic effects of metals: Toxicity of Iron , Copper , Arsenic , Mercury, Lead, Cadmium, Aluminium & Radionuclide & Wilson's disease.

Text Books

3. Keith Wilson, John Walker. 2008. Principles and Techniques of Biochemistry and Molecular Biology, 6th Edn. Cambridge University Press.

Pedagogy: Lecture by chalk & talk, power point presentation, e-content, simulation, numerical exercises, group discussion, assignment, quiz, seminar.

Course Designers:

1. Mrs. N. ShyamalaDevi, Dr. N. Aruna Devi - Department of Chemistry

2. Dr. K. Gajalakshmi, Dr. K .S. Tamilselvi - Department of Botany

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL16P1	Practical I Theory paper I, II and III Plant Diversity, Anatomy, Embryology & tissue culture & applied microbiology	CORE	-	-	105	4

Preamble

- To observe, characterize and identify the different forms of Algae, Fungi, Bryophytes, Pteridophytes and Gymnosperms.
- To identify the plants by their anatomical characters.
- To identify the embryological characters of the plants.
- To standardize the media for tissue culture.
- To isolate microorganisms from the various sources and to establish pure cultures.

Course Outcomes

On the successful completion of the course, students will be able to

COs	CO Statement	Knowledge Level
CO1	Learn & compare different life forms of the plants	K2
CO2	Identify the anatomical characters	K3
CO3	Identify the embryological characters	K3
CO4	Examine the explants and callus culture	K4
CO5	Isolation of microbes from various samples in different media	K5

Mapping with Programme Outcomes

S- Strong; M-Medium

Syllabus

Algae

45 hrs

Scenedesmus, Pithophora, Bulbochaete, Nitella, Diatoms- Cyclotella and Navicula, Padina, Batrochospermum, Gracilaria and Lyngbya

Mycology

Isolation of coprophilous fungi. *Saprolegnia, Lycoperdon, Phyllochora, Cercospora*

Plant pathology

Herbarium of Paddy Blast, Angular Leaf spot of Cotton and Cucumber Mosaic Virus.

Bryophytes

Vegetative and reproductive structures of *Reboulia, Lunularia, Anthoceros, Pogonatum* and *Sphagnum*

Pteridophytes

Selaginella, Isoetes, Osmunda, Adiantum, Angiopteris, Pteris, Azolla

Gymnosperms

Cycas, Pinus, Araucaria, Cupressus..

Anatomy

30 hrs

Anomalous secondary thickening - *Aristolochia, Bignonia,, Piper, Leptadaenia, Mirabilis, Achyranthes, Dracaena.*

Nodal anatomy – unilacunar, trilacunar and multilacunar nodes.

Submission of 5 permanent slides of Stem/ root/ leaf / petiole (**only hand sections**)

Embryology

T. S. of anther - archesporial, pollen mother cell stage and mature anther.

Pollen germination.

Embryo sac – 4 nucleate and 8-nucleate.

Endosperm haustoria,

dicot and monocot embryo.

Embryo dissection-*Tridax*

Tissue culture

Preparation of MS medium,

Inoculation of Explants

Callus culture and Micropropagation

Applied Microbiology

30 hrs

Preparation of PDA medium.

Preparation of Mueller Hinton Agar (MHA) medium.

Preparation of Sabouraud Dextrose Agar (SDA) medium,

Preparation of selective medium-Pikovskaya's medium,

Isolation of micro organisms from soil, spoiled vegetables and fruits.

Isolation of phosphorus solubilizing micro organism.

Milk spoilage test.

Edible mushroom production.

Preparation of vermicompost.

Course designers

Mrs. E. Uma

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL16P2	PRACTICAL - II Theory Papers (IV, V, VI and VII) Cell Biology and Genetics	Practical	-	-	120	4

Preamble

- To gain knowledge about the fundamental processes of cell division
- To be skilled in solving problems in genetics
- To discern and appreciate the physiological and biochemical process in plants
- To acquire the capability of identifying and quantifying prokaryotic and eukaryotic genome.
- To refine the skills in nano-particle identification

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO Number	CO Statement	Knowledge Level
CO1	Assess the biological processes of cells	K3
CO2	Calculate and categorize problems in genetics	K4
CO3	Explain physiological processes and formulate biochemical experiments	K5
CO4	Resolve, criticize and defend problems at molecular level	K6

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	M	S	S
CO2	S	S	S	S	S
CO3	S	S	M	S	S
CO4	S	S	M	S	S

S- Strong; M-Medium

Syllabus

Cell Biology and Genetics

30 hrs

Mitosis and Meiosis.

Spotters – plasma membrane, cell organelles, chromosomes, lamp brush chromosomes. Simple problems in genetics – Monohybrid, dihybrid and factor interaction. Linkage maps.

Physiology and Biochemistry

45 hrs

Physiology

Individual experiments

Separation of leaf pigments (Paper chromatography)

Separation of flower pigments (Thin Layer Chromatography)
Effects of CO₂ Concentration and light intensity on photosynthesis- Wilmot's bubbler
Absorption spectrum of chlorophyll a and b
Test for Fat/oils.
Test for proteins.

Demonstration

Hill's reaction by isolated chloroplast.
Column chromatography - leaf pigment separation
Effect of cytokinin on leaf senescence.
Effect of auxin on etiolated seeds.
Effect of GA₃ on amylase.

Biochemistry

Individual experiments:

Estimation of total carbohydrates and total proteins.
Effect of temperature on membrane permeability - beetroot discs.

Demonstration Experiments

TLC of Sugars, amino acids and Estimation of total lipids.

Molecular Biology

45 hrs

Single bacterial colony isolation
Isolation of Bacterial genomic DNA
Estimation of Bacterial genomic DNA – Spectrophotometer analysis
Estimation of Bacterial genomic DNA – Agarose Gel Electrophoresis & Gel documentation
Isolation of Plasmid DNA
Estimation of Plasmid DNA – Spectrophotometer analysis
Estimation of Plasmid DNA – Agarose Gel Electrophoresis & Gel documentation
Isolation of Plant genomic DNA
Estimation of Plant genomic DNA – Spectrophotometer analysis
Estimation of Plant genomic DNA – Agarose Gel Electrophoresis & Gel documentation

Spotters: Fullerene C₆₀, Gold nanoparticles, Carbon nano tube

Course designers

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1910	Paper X – Taxonomy of Angiosperms	Core	56	4	-	4

Preamble

- To understand the principles of plant systematics, taxonomic and phylogenetic relationships.
- To grasp the importance of taxonomy softwares and GIS.
- To gain a comprehensive idea of herbarium techniques.
- To develop skill in identification of plants.
- To acquire knowledge on the diagnostic characters and economic importance of plant families.

Course outcomes

On the successful completion of the course, students will be able to understand the following:

CO Number	CO statement	Knowledge level
CO1	Illustrate the different systems of classification of flowering plants	K2
CO2	Apply the knowledge of Herbarium technique and GIS in identification of plants	K3
CO3	Analyze and appraise the role of International Code of Nomenclature (ICN) in naming of plants	K4
CO4	Compare and explain the diagnostic characters among different families	K5

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5

CO2.	S	S	M	S	M
CO3.	S	S	M	S	M
CO4.	S	S	M	S	M

S- Strong; M – Medium

Syllabus

Unit I

11 hrs

History of classification - Contributions of Linnaeus. Systems of classification Bentham and Hooker, Engler and Prantl and Hutchinson: Principles, merits and demerits of the systems. APG system of classification III (2009). Phylogeny of Angiosperms.

Unit II

11 hrs

Modern trends in taxonomy: anatomy, embryology, cytology, chemical characters and their use in taxonomy. Molecular taxonomy and its applications. Herbarium technique, floras, monograph. Computer aided taxonomy– DELTA, GRIN, IPNI. Biodiversity portal. GIS in taxonomy.

Unit III

11 hrs

Botanical Nomenclature: Principles and recommendations of ICN –typification, priority, valid and effective publication, citation, retention, and conservation. Key-types. Botanical gardens, major herbaria in India and World. Plant distribution-continuous and discontinuous distribution. Endemism – types with examples.

Unit IV

11 hrs

Study of diagnostic characters, economic importance and phylogenetic relationship of: Magnoliaceae, Menispermaceae, Polygalaceae. Caryophyllaceae, Oxalidaceae, Meliaceae, Vitaceae, Sapindaceae and Fabaceae.

Unit V

12 hrs

Combretaceae, Lythraceae, Aizoaceae, Oleaceae, Apocynaceae, Boraginaceae, Bignoniaceae, Nyctaginaceae, Aristolochiaceae, Santalaceae, Araceae, and Cyperaceae.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1911	Paper XI – Medicinal Botany	Core	41	4	-	3

Preamble

- To study the importance of medicinal plants in human life
- To understand the drug designing and drug development

Course Outcomes

CO Numbers	CO Statement	Knowledge Level
CO1	Understand the importance of traditional knowledge in human welfare	K2
CO2	Apply the pharmacognostical techniques to evaluate plant drug	K3
CO3	Identify the phytochemical constituents present in the plants	K4
CO4	Apply the knowledge to bring out the herbal products at industrial level	K5

Mapping with Programme Outcomes

CO2	S	S	M	S	S
CO3	S	M	S	S	S
CO4	S	M	M	S	M

S- Strong; M-Medium

Syllabus

Unit I

8 hours

Ethnobotany: concepts and definition. History of Ethnobotany, Distribution of tribes in India, Basic knowledge of tribes- Irulas, Kanis, Paliyars. Pharmacognosy- Introduction, Classification of crude drugs- organized drugs - morphological, chemical and pharmacological method; unorganized crude drugs – gums, mucilages, and resins.

Unit II**8 hours**

Scheme for pharmacognostic studies of crude drugs: Collection of drugs. Processing of crude drugs- Drying – Natural and Artificial methods; Marketing of drugs. Factors affecting the yield of drugs. Evaluation of crude drugs – Microscopic evaluation, physical evaluation –Moisture, Extractive value and ash value.

Unit III**8 hours**

Drug adulteration: Types of adulterants. Chemical evaluation of drugs- Soxhlet extraction - qualitative estimation of alkaloids, glycosides, phytosterols, tannins and terpenoids. Steam distillation- Essential oil –*Eucalyptus* and *Citronella* oil

Unit IV**8 hours**

Biological sources: Geographical distribution and uses of drugs –*Tinospora cordifolia*, *Tylophora asthmatica*, *Acorus calamus*, *Terminalia chebula*, *Plantago ovata* and *Holarhena antisysenterica* and *Papaver somniferum* .

Unit V**9 hours**

Applications: Phytochemicals in industry and health care. Plant drugs in the treatment of diseases- Arthritis, Constipation, diabetes, psoriasis, hypertension and memory loss. Biocides, biofungicides, and Biopesticides.

Text Books

1. Kokate, K., A.P. Purohit and S.B. Gokhale, 2007. Pharmacognosy, 39thEdn. NiraliPrakahana, India.

Dr. M. Kamalam

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1912	Paper XII – Genetic Engineering	Core	56	4	-	4

Preamble

- To acquire detailed idea about genome organization in plants, methodologies and markers in gene cloning
- To discern and appreciate the basic techniques and safety concerns in genetic engineering
- To realize the applications of genetic engineering in combating biotic and abiotic stress in economically important plants

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1.	Apply the knowledge of vectors and gene manipulation techniques	K3
CO2.	Analyze and appraise the methodologies of gene transformation	K3
CO3.	Interpret the role of markers in genetic engineering	K4
CO4.	Categorize and deduce the effects of gene manipulation	K5
CO5.	Formulate techniques for stress tolerance in plants	K5

Mapping with Programme Outcomes

CO1	S	S	S	S	S
CO2	S	S	M	M	S
CO3	S	S	M	S	S
CO4	S	S	M	M	S
CO5	S	M	M	S	S

S- Strong; M-Medium

Syllabus

Unit I

11 hrs

Vectors in gene cloning: Plasmids, Phagemids, Cosmids. Artificial chromosomes:, BAC, YAC and PAC. Features of Ti and Ri plasmids and its use as vectors, binary vectors, viral vectors, Transposons as vectors. Promoters and terminators: inducible promoters and tissue specific promoters.

Unit II

11hrs

Plant Genetic Transformation: Gene transfer methods in plant cells: Transfection, Electroporation, Ultra sonication, Particle Bombardment – Gun method, Agroinfection and Liposome fusion. Transgene stability and gene silencing.

Unit III**11hrs**

Molecular markers – Introduction, Classification of molecular markers – RFLP, RAPD, AFLP, Microsatellites (SSRs) and Minisatellites. Application of DNA markers in molecular breeding. QTL mapping and marker assisted selection breeding – MABB, MARS, Marker assisted QTL introgression and Gene pyramiding.

Unit IV**11hrs**

Concerns about GM crops - Golden rice and terminator seeds. Safety concerns Basic techniques in Genetic Engineering: Isolation and purification of nucleic acids, Agarose gel electrophoresis, PCR, Southern, Northern and Western blotting techniques.

Unit V**12hrs**

Application of Plant Transformation: Biotic stress: Herbicide resistance-phosphinothricin. Insect resistance- *Bt* genes. Disease resistance - PR proteins. Virus resistance: Coat protein mediated and nucleocapsid gene. Abiotic stress: Drought, cold and salt resistance. Post-harvest losses: long shelf life of fruits and flowers.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1913	Paper- XIII – Plant Ecology and Phytogeography	Core	56	4	-	4

Preamble

- To provide in depth knowledge about ecology and the human impact on ecosystems.
- The course will give a picture on how an ecological approach and methods may be used to investigate different environmental issues.

Course Outcomes

On the successful completion of the course, students will be able to

Cos	CO Statement	Knowledge Level
CO1	Use ecological knowledge in order to understand the distribution of species in ecosystems.	K2
CO2	Discuss different theories that may explain biological diversity and threats towards biological diversity.	K3
CO3	Understand the concepts of ecological succession, concept of climax and ecosystem equilibrium and stability.	K3
CO4	Explain the ecological background to the most important environmental problems in the world.	K5
CO5	Interpretate geological history and the role of historical biogeography in plant distributions.	K4

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5

CO2	S	S	M	S	S
CO3	S	M	S	-	M
CO4	S	S	S	S	S
CO5	S	M	M	M	-

S- Strong; Medium

Syllabus

UNIT-I: Ecosystem Structure and function

11hrs

Structure- Abiotic, Biotic, Ecological pyramids. Function of ecosystem: Productivity- primary, secondary, Food chains- Grazing, Detritus. Food webs and tropic levels and energy flow.

UNIT II: Community Ecology

11hrs

Characteristics of communities Analytical Quantitative – Frequency, density, Abundance, Cover and Basal area. Qualitative – Physiognomy, Phenology, Stratification, sociability, vitality and Life form. Synthetic characters- Prence and constance, Fidelity, Dominance. Method of study of communities-

Raunkiaer's Life form , **Physiological methods- Sampling units, Quadrat method, Transect method, Point method.**

UNIT III: Ecological Succession

11hrs

Causes, trends of succession, Types of succession- Primary, secondary and allogenic, Process of succession- Nudation, Invasion, competition and coactions-reaction, stabilization. Concept of climax- Monoclimax and Polyclimax theories.

Population Ecology: Characteristics of a population (Population size and Density, Dispersion, Age structure Natality (Birth Rate), Mortality (Death rate), Biotic potential, Life Tables, Population growth curves.

UNIT IV: Applied Ecology

11hrs

Global environmental change -Atmosphere composition and structure, Global warming- Green house gases and Ozone depletion. Remote sensing and Geographic Information System (GIS).

Conservation strategies: IUCN categorization- *In-situ* conservation (National parks, Biosphere reserves, Wildlife sanctuaries) *Ex-situ* conservation –(Seed bank, Botanical gardens). Sacred groves.

UNIT V: Phytogeography

12hrs

Principles and importance of plant geography- Phytogeographic regions of India. Agro- climatic regions of India, Patterns of distribution – Disjunction and Variance. Theories of present day distribution of plants- Continental drift hypothesis- Gondwana land factors involved in distribution. Factors involved in distribution – Endemism, Age and Area hypothesis; Dispersal and Migration and their aims and methods.

The topics shall be studied by the students through quiz, field trips and online links mentioned in the reference.

CO1	S	S	M	M	S
CO2	S	S	M	M	S
CO3	S	S	M	S	S

S- Strong; M-Medium

Syllabus

Unit I

8 hrs

Microtechnique – Killing, Fixing, Preparation of Paraffin blocks –dehydration and infiltration with paraffin, Sectioning, Staining, and Mounting. Ocular and Stage micrometer.

Unit II

8 hrs

Principles and uses of pH meter. Centrifugation-Principle, Types of Centrifuges - clinical centrifuge, refrigerated centrifuge, High speed centrifuge - ultra centrifuge, Applications of Centrifugation.

Unit III

8 hrs

Spectrophotometer- Beer-Lambert's Law, Principle, types-UV Visible spectrophotometer, Atomic Absorption Spectrophotometry and Applications. FTIR.

Unit IV**8 hrs**

Principles and applications of chromatography: Paper Chromatography, Thin layer Chromatography, Column Chromatography, Gas Liquid Chromatography (GLC), High Pressure Liquid Chromatography (HPLC).

Unit V**9 hrs**

Enzymology- protein purification - analytical and preparative methods. Extraction, Repeated freezing and thawing, sonication, homogenization, Filtration, precipitation, Dialysis, purification, Gel Electrophoresis, SDS PAGE, Gel Documentation. Concentration of the purified protein- Lyophilisation. Crystallization.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1915	Paper XV – Immunology	Core	41	4	-	3

Preamble

- To understand the concept of immune systems.
- To gain knowledge about mechanism of immunity.
- To know the relationship between immunity and cancer.

Course Outcomes

On the successful completion of the course, students will be able to understand the following:

CO Number	CO statement	Knowledge level
CO1	To understand the types of immune cells	K2
CO2	To understand antigen-antibody interaction	K3
CO3	Importance of immunodeficiency and transplantation	K3
CO4	Create awareness about vaccination and hypersensitivity reaction	K4
CO5	To evaluate the role of immunity in health and disease	K5

S- Strong; M – Medium

Syllabus

Unit I

8 hrs

Immune system:- Phagocytes, mast cells, basophils, lymphocytes, lymphoid organs and tissues; T cells, B cells. Immunity in the newborn.

Unit II

8 hrs

Antibody:- Basic structure, classes and functions. A brief account of cytokines. Antigens; tumor antigens; B cell recognition of antigen; T cell recognition of antigen. Major histocompatibility complex.

Unit III

9 hrs

Immunodeficiency:- Deficiency in the immune system, Primary / congenital (inherited), secondary (acquired) immunodeficiency. Diagnosis and treatment of immunodeficiency. Transplantation:- Transplantation problems, transplantation antigens, rejection mechanism, prevention of graft rejection.

Unit IV

8hrs

Vaccination:- Principles of vaccination, immunization, antigen preparations, vaccines to pathogens, tumor vaccines. Hypersensitivity- Definition, classification, a brief account of various types. Brief account on edible vaccines.

Unit V

8 hrs

Immunity in health and disease: autoimmune diseases-insulin dependent diabetes, rheumatoid arthritis and autoimmune hemolytic anemia. Organ transplantation, cancer and AIDS.

Text Books

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL19S1	Special Paper- Research Methodology	Core	30	-	-	2

Preamble

- To give background on history and methodologies of scientific research and scientific reading
- To provide basic knowledge on research designs, IPR and especially patents and patent regulations
- To understand the importance of sampling, data collection and statistical analysis of data and interpret data
- To learn report writing and presentations, Gain knowledge of biosafety and risk assessment
- To become familiar with ethical issues in biological research

Course outcomes

On the successful completion of the course, students will be able to:

CO Number	CO statement	Knowledge level
CO1	Understand history and methodologies of scientific research and scientific reading	K2
CO2	Understand and practice research designs, IPR and especially patents and patent regulations;	K3
CO3	Acquire knowledge on data collection, Analyze and interpret the data	K5
CO4	Apply knowledge in report writing and presentations, Gain knowledge of biosafety and risk assessment	K5
CO5	Understand ethical aspects related to biological research. Appreciate scientific ethics through case studies	K4

CO3.	M	S	S	S	S
CO4.	M	M	M	S	M
CO5.	M	M	S	S	S

S- Strong; M – Medium

Syllabus

Unit I

6 hrs

Meaning of research: objectives of research; Essential steps in research; types of research. Research methods Vs methodology. Research process– formulating the research problem. Selecting the problem, defining the problem, extensive literature survey, use of internet for literature collections, development of working hypotheses

Unit II

6 hrs

Research Design:- Definition and importance of research design, features of a good design;– Classification of different search designs – a) exploratory research studies b) Descriptive, diagnostic research, c) Hypothesis testing research – experimental studies. Basic principles of experimental designs – Principle of replication, Principle of randomization, Principle of local control. IPR and patents

Unit III

6 hrs

Sampling: Deliberate sampling, simple random sampling, systematic samples, stratified sampling, quota sampling, cluster sampling, multistage sampling, sequential sampling. Sampling errors and sample size. Data collection – by observation, through personal interviews, telephone interviews, mailing questionnaires, through schedule. Processing and analysis of data – editing, classification, tabulation, statistical analysis – DMRT, and ANOVA. Correlation and regression. Introduction to SPSS.

Unit IV

6 hrs

Report writing – logical analysis of the subject matter, preparation of final outline, preparation of rough draft, rewriting and polishing Bibliography – books and pamphlets; magazine and newspapers; thesis and dissertations. Final draft – layout – A) Preliminary pages, title, name of author, year; acknowledgement, declaration, preface/foreword; table of contents, list of tables and figures. B) Main text – introduction, review of literature; methods adopted, results, discussions, summary, bibliography. C) Appendices includes plates, publications of author. Research publications: Format of a research paper – preparation, submission of manuscripts to journals– local, national and international. Plagiarism, Impact factor, citation index. Safety measures in a research laboratory

Unit V

6 hrs

Research Ethics and Responsible Conduct in Research

Brief history and analytical basis of research ethics, responsible conduct in research (Honesty in Science: Integrity, Authorship, Conflicts of Interest, Privacy and Confidentiality, Informed Consent, Risk/Benefit Assessment), The legal regulation of research ethics in India (From UGC, MHRD and other governing agencies), Regulatory requirements relevant to international research. Ethical conflicts in biological sciences - interference with nature, for experiments involving animals and humans.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL16P3	Practical III Theory paper X and XI	CORE	-	-	60	2

Preamble

- Collection, identification and classification of plants.
- Preparation and maintenance of Herbarium
- Extraction of medicinal plants
- Qualitative analysis of chemical components
- Testing of plant extracts for antimicrobial properties

Course Outcomes

On the successful completion of the course, students will be able to

Cos	CO Statement	Knowledge Level
CO1	Identify and classify the plants taxonomically	K3
CO2	Evaluate the medicinal plants for their phytochemical constituents	K4
CO3	Testing the ability of plant extracts for their antimicrobial properties	K5

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5
CO1	S	M	S	S	S
CO2	S	S	M	S	S
CO3	S	M	S	S	S

Syllabus

Taxonomy

30 hrs

Study of the morphological, floral characters, economic importance of the families- *Magnoliaceae*, *Menispermaceae*, *Polygalaceae*, *Caryophyllaceae*, *Oxalidaceae*, *Meliaceae*, *Vitaceae*, *Sapindaceae*, *Fabaceae*, *Combretaceae*, *Lythraceae*, *Aizoaceae*, *Oleaceae*, *Apocynaceae*, *Boraginaceae*, *Bignoniaceae*, *Nyctaginaceae*, *Aristolochiaceae*, *Santalaceae*, *Araceae* and *Cyperaceae*.

Preparation of artificial key with 4 species of a genus.

Preparation and submission of 25 herbarium specimens of common weeds/wild plants.

Two or Three days field visit for herbarium preparation

Phytopharmaceutical science

30hrs

1. Collection of any five medicinal plants mounted on herbarium sheets and recording their medicinal properties.
2. Analysis of morphological features and medicinal importance of the following
 - a. Bark – *Cinnamomum zeylanicum*
 - b. Rhizome – *Alpinia galanga*
 - c. Root - *Vetiveria zizanoides*
 - d. Bulb – *Gloriosa superba*
 - e. Gum – *Cyamopsis tetragonolobus*
 - f. Mucilage – *Trigonella foenum-graecum*
 - g. Leaves – *Solanum trilobatum*
3. Qualitative phytochemical studies-
 - i. Group experiments
 - a. Soxhlet extraction and estimation of extractive values of polar and non polar solvents
 - ii. Individual experiment
Qualitative analysis of powder of any 2 medicinal plants
 - a. Alkaloids, b. Tannins, c. Flavonoids d. Glycosides.
4. Antimicrobial properties of any two plant extracts.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL16P4	Practical IV (Theory XII and XIII)	Core	-	-	60	2

Preamble

- To gain knowledge about the fundamental processes of genetic engineering
- To be skilled in handling various equipments
- To acquire the capability of performing immunological studies.

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO's	CO Statement	Knowledge Level
CO1	Assess the various aspects of genetic engineering	K3
CO2	Categorize and handle the scientific equipments	K4
CO3	Explain immunological processes	K5
CO4	Resolve, criticize and defend problems at molecular level	K6
CO5	Examples of vegetation patterns and processes, including a class walk to visit and discuss the vegetation ecology.	K5
CO6	Recognize the complexity of ecological interactions at different spatial and temporal scales in plant communities.	K6
CO7	Gain appreciation for the importance of proper sampling design in ecological field studies.	K6

CO7	S	S	S	S	M

S- Strong; M-Medium

Syllabus

Genetic Engineering

30hrs

1. Restriction and Digestion of DNA
2. Polymerase Chain Reaction
3. Southern Blotting
4. Protein isolation
5. SDS PAGE

Spotters: RNA isolation, Western Blotting, gene Gun, *Agrobacterium* mediated gene transformation, Bt Cotton, Golden rice.

Plant Ecology and Phytogeography

30 hrs

To determine the quantitative characters in the community by using quadrat method.

- a) Frequency b) abundance c) density d) basal cover e) IVI.
1. Synthetic characters: Similarity index, FICC, dominance index, diversity index.
 2. Raunkiaer's life form classes and percentage distribution of species in vegetation.
 3. Stratification, Zonation – Demonstration.
 4. Field visit – Report preparation on vegetation types, conservation measures under taken in biosphere reserves/ national parks/ sanctuaries etc.

Immunology

Demonstration: Antibiotic sensitivity test – Penicillin, Ampicillin, Cefotoxin, Kanamycin. Immunoprecipitation, Double Immunodiffusion, Single Radial Immunodiffusion, Electroimmunoassay (Rocket Immunoelectrophoresis), Hemagglutination Assay.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MNM15CS	Cyber Security	-	26	4	-	Grade

Objective

This course presents the principles of Cyber Security and its attack. It covers all aspects of cyberspace, botnet, cyber crime and its case studies.

Unit I

5hrs

Cyberspace: Introduction- Web Threats for Organizations - Security and Privacy Implications from Cloud Computing - Social Media Marketing - Social Computing and the Associated Challenges for Organizations - Protecting People's Privacy in the Organization- Organizational Guidelines for Internet Usage- Safe Computing Guidelines and Computer Usage Policy.

Unit II

5hrs

Security Threats: Malicious Software, Types of Attacks, Threats to E-commerce, e-cash, Credit/Debit Cards.

Unit III

5hrs

Cyber Security: Introduction - An Essential Component of Cyber security - Forensics Best Practices for Organizations - Media and Asset Protection - Importance of Endpoint Security in Organizations

Unit IV

5hrs

Cyber Attacks: Introduction - How Criminals Plan the Attacks - Social Engineering - Cyberstalking -Cybercafe and Cybercrimes - Botnets: The Fuel for Cybercrime - Attack Vector - Cloud Computing

Unit V

6hrs

Case Study on Cyber Crime & Security: Introduction on Cyber Crime - Trends in Mobility - Credit Card Frauds in Mobile and Wireless Computing Era. Illustrations, Examples and Mini-Cases - Introduction - Real-Life Examples - Mini-Cases Illustrations of Financial Frauds in Cyber Domain - Digital Signature-Related Crime Scenarios - Digital Forensics Case Illustrations - Online Scams.

Text Books

1. Faculty of Computer Science – PG. 2016. Essentials of Cyber Security, KalaiKathir Achachagam, PSGR. Krishnammal College, Coimbatore.

Reference Books

1. Nina Godbole and Sunit Belpure, 2011. Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives, Publication Wiley.
2. William Stallings, 2011. Network Security Essentials – Applications and Standards, Pearson Education.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1916	Paper XVI– Energy Science	Core	71	4	-	5

Preamble

- To know the different forms of energy resources
- To study the need for alternative energy sources

Course Outcomes

On the successful completion of the course, students will be able to

Cos	CO Statement	Knowledge Level
CO1	Understand the current status of the energy sources in the world	K2
CO2	Identify the alternative energy sources	K3
CO3	Maintain the natural resources	K4

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5
CO1	M	S	S	M	M
CO2	S	S	S	S	M
CO3	S	M	M	S	M

Syllabus

Unit I

14hrs

Nonrenewable energy resources: Definition, types of fossil fuels – coal, oil shale, Natural gas and petroleum; Atomic energy – Thorium and Uranium as sources of atomic energy.

Unit II

14hrs

Renewable energy resources: Definition, types – solar energy, wind energy, tidal energy, geothermal energy and hydroelectric energy. Hydrogen as energy resources.

Unit III

14hrs

Biomass energy resources: Types – terrestrial and aquatic biomass. Energy plantation. Bio fuel Production by chemical and enzyme catalysis. Methods for energy production- biogas and electricity. Advantages and disadvantages of using biomass as energy source.

Unit IV

14hrs

Natural resources and their management: Classification of natural resources. Land resource management – soil erosion, water erosion, wind erosion and their management; Water resource

management – surface water resources and ground water resources. Problems of water management. Forest resource management.

Unit V

15 hrs

Phytoremediation: Definition, phytostabilization, phytodegradation, phytofiltration, rhizodegradation, phytoextraction. Strategies to enhance phytoremediation. Advantages and disadvantages of phytoremediation. Application of genetic engineering in phytoremediation. Case studies of the above types of phytoremediation.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1917	Paper XVII- Forestry	Core	71	4	-	5

Preamble

- To learn the fundamental aspects of forestry
- To know the silviculture of trees and propagation techniques, Nursery techniques
- To learn the utilization of forest
- To learn about forest tree improvement practices
- To study about the role of forests in environment and forest protection measures

Course Outcomes

On the successful completion of the course, students will be able to understand the following

CO Number	CO Statement	Knowledge Level
CO1.	To learn the fundamental aspects of forestry	K2
CO2.	To know the silviculture of trees and propagation techniques, Nursery techniques	K3
CO3.	To apply the knowledge of sustainable utilization of forest	K4
CO4.	To apply the knowledge in forest tree improvement practices	K5

Mapping with Programme Outcomes

CO3.	M	S	M	S	M
CO4.	S	M	S	M	S

S- Strong; M-Medium

Syllabus

Unit I

14 hrs

Introduction to Forestry– Forest - Definition, types of forest - natural and manmade: tropical, temperate, evergreen, semi evergreen, deciduous; monoculture, agroforestry, social and plantation forestry. Classification of world forests and Indian forests. Classification based on site quality density, tolerance, crown; water cycles of forest.

Silviculture: Concept, Ecological and physiognomic factors influencing vegetation, natural and artificial regeneration of forests Seed dynamics in forest: seed production, dissemination, germination, establishment and mortality.

Unit II

14 hrs

Methods of propagation, grafting techniques; nursery and planting techniques - seed dormancy and seed treatment, nursery beds, polybags and maintenance, water budgeting, grading and hardening of seedlings; special approaches; establishment and tending. Silviculture of some of the economically important species in India such as *Bamboo* spp, *Casuarina equisetifolia*, *Santalum album*, *Shorea robusta*, *Tectona grandis*.

Unit III

14 hrs

Forest utilization: Environmentally sound forest harvesting practices; logging and extraction techniques and principles, transportation system, storage and sale; Timber and Non-Timber Forest Products (NTFPs) definition and scope; gums, resins, oleo-resins, fibres, oil seeds, nuts, rubber, canes, bamboos, medicinal plants, charcoal, lac and shellac collection; processing and disposal. Pulp-paper and rayon.

Unit IV

14 hrs

Tree Improvement and Seed Technology: General concept of tree improvement, methods and techniques, variation and its use, provenance, seed source, exotics; quantitative aspects of forest tree improvement, seed production and seed orchards, progeny tests, use of tree improvement in natural forest and stand improvement, genetic testing programming, selection and breeding for resistance to diseases, insects, and adverse environment; the genetic base, forest genetic resources and gene conservation in situ and ex-situ. Forest economics and Cost benefit ratio.

Unit V

15 hrs

Forest and Environment: Role of forests in conserving soils. Maintenance and build up of soil organic matter, forest leaf litter and composting; Role of microorganisms in ameliorating soils; N and C cycles, Role of forest in environmental amelioration. Climate change and Forests.

Forest protection: Forest protection – injuries to forest – biotic and abiotic agencies, control measures. Major pest and disease problems in forestry. General forest protection against fire. Forest policies and laws for protection of forests.

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
MPL1418	Paper – Advanced Learners Course-Food Science and Nutrition	Core	Self study	-	-	5

Preamble

- To understand the nutritional importance of food substances and dietary allowances.
- To acquire knowledge about toxic effects and adulteration of food substances.

Course outcomes

On the successful completion of the course, students will be able to understand the following:

CO Number	CO statement	Knowledge level
CO1	To understand recommended dietary allowances	K2
CO2	To know the composition and nutritive value of food groups	K2
CO3	Create awareness about macronutrients and their malnutrition	K3
CO4	To understand the nutritional importance of vitamins and minerals	K4
CO5	To evaluate food toxicants and food spoilage	K5

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5

CO2.	S	S	S	S	S
CO3.	M	M	M	M	S
CO4.	M	M	M	M	M
CO5.	M	M	M	M	S

S- Strong; M – Medium

Syllabus

Unit I

Introduction to food science and nutrition. Recommended Dietary Allowances (RDA): Factors affecting RDA, methods used for deriving RDA, requirement and RDA. Reference man and Woman. Indian standards for height and weight. Comparison of Indian recommended allowances with that of FAO\WHO standards.

Unit II

Composition and nutritive value of different food groups: cereals, pulses, nuts, fruits, vegetables, meat and egg. Milk – composition, physical properties, nutritive value. Effect of heat, acid and

enzyme on milk. Processing of milk- Pasteurisation. Milk products: non fermented and fermented milk products. Methods of cooking – Objectives, moist heat method, pressure cooking, dry heat method and microwave cooking.

Unit III

Nutritional importance, digestion and absorption of macronutrients: Carbohydrates, proteins and lipids. Detailed study of diabetes- 2 types, glucose tolerance, diagnosis and control, diabetes and hypoglycemia; Amino acid requirement, and essential amino acids; indices of protein quality evaluation, protein and iron malnutrition-kwashiorkore, essential fatty acids, deficiency and excess of fats, role of fats in heart disease – atherosclerosis.

Unit IV

Nutritional importance, cheaper sources, deficiency diseases and their control of micronutrients- vitamins and minerals : vitamins- Vitamin A-night blindness, B-Beriberi, C - Scurvy, D- Rickets, E and K. Heat sensitivity of vitamins. Minerals: Macro minerals: Calcium and Phosphorous - Osteoporosis. Microminerals: Iron and Iodine – anemia and goiter.

Unit V

Naturally occurring food toxicants: protease inhibitors, haemeagglutinins, cyanogens, saponins, lathrogens. Allergy and allergens. Food spoilage and preservation: Role of microorganisms in food spoilage, health disorder – botulism. Food preservation – Methods of food preservation using low temperature, high temperature, osmotic pressure and dehydration.
