

PSGR KRISHNAMMAL COLLEGE FOR WOMEN

College of Excellence

(An Autonomous Institution, Affiliated to Bharathiar University)
(Reaccredited with 'A' Grade by NAAC, An ISO 9001:2008 Certified Institution)
Peelamedu, Coimbatore-641004

DEPARTMENT OF MATHEMATICS (PG)

**CHOICE BASED CREDIT SYSTEM &
OUTCOME BASED EDUCATION SYLLABUS**

MASTER OF MATHEMATICS (M.Sc. Mathematics)

2017 - 2019

PSGR KRISHNAMMAL COLLEGE FOR WOMEN

College of Excellence

(An Autonomous Institution, Affiliated to Bharathiar University)
(Reaccredited with 'A' Grade by NAAC, An ISO 9001:2008 Certified Institution)
Peelamedu, Coimbatore-641004

PROGRAMME OUTCOME – PG

After completion of the programme, the student will be able to

PO1: Students acquire sound analytical and practical knowledge to formulate and solve challenging problems.

PO2: Students will be able to read and identify mathematical and computational methods in order to solve comprehensive problems.

PO3: Students are well prepared to take jobs in schools and colleges as Mathematic Teachers and Professors, Software Industries, Research and Development Organizations.

PO4: Students to pursue higher studies in Mathematical and Computing Sciences and to clear Competitive exams like SET/ NET/ TET etc.

PO5: Students to learn and apply Mathematics in real life situations aiming at service to the society.

MASTER OF SCIENCE (M.Sc)

PROGRAMME SPECIFIC OUTCOME

The students at the time of graduation will

PSO1: Provide Strong foundation and inculcate ample knowledge on topics in pure and applied mathematics, empowering the students to pursue higher degrees at reputed academic institutions.

PSO2: Advanced mathematical topics provide opportunities to research students for communication and discussion.

PSO3 : Demonstrate the highest standard of ethics in research.

PSO4: Provide scope for interaction with international researchers and developing collaborations.

PSO5: Provide knowledge of a wide range of mathematical techniques and application of mathematical methods/tools in other scientific and engineering domains.

PSO6: Nurture problem solving skills, thinking, creativity through assignments, project work.

Question Paper Pattern

PG

CIA

Bloom's Category	Section	Marks		Total
K ₁ , K ₂	A – 5x2 marks (No Choice)	10	1 or 2 sentences	50
K ₃ , K ₄	B – 4 x 5 marks (No Choice)	20	250 words	
K ₅ , K ₆	C – 2 out of 3 (2x 10 marks)	20	500 words	

End Semester Examination

Bloom's Category	Section	Marks		Total
K ₁ , K ₂	A – 10x3 marks (No Choice)	30	1 or 2 sentences	100
K ₃ , K ₄	B – 6 out of 7(6 x6 marks)	36	250 words	
K ₄ , K ₅	C – 3 out of 5 (3x 8 marks)	24	400 words	
K ₅ , K ₆	D- 1 x10 (No choice)	10	600 words	

Question paper pattern for ALC- CA

Bloom's Category	Section	Marks		Total
K ₃ , K ₄	A – 4 out of 6 (4 x 4 marks)	16	250 words	25
K ₄ , K ₅	B – 1 out of 2 (1 x 9 marks)	9	500 words	

Model and End Semester Examination

Bloom's Category	Section	Marks		Total
K ₃ , K ₄	A – 5 out of 8 (5x 5 marks) (Open Choice)	25	250 words	75
K ₄ , K ₅	B – 5 out of 8 (5 x 10 marks) (Open Choice)	50	500 words	

PROJECT

Internal Assessment: 20 Marks

Review	Mode of Evaluation	Marks	Total
I	Selection of the field of study, Topic & Literature Collection	5	20
II	Research Design and Data Collection	10	
III	Analysis & Conclusion, Preparation of rough draft	5	

External Assessment: 80 Marks

Mode of Evaluation	Marks	Total
Project Report		
Relevance of the topic to academic / society	10	60
Objectives	10	
Experimental Design	20	
Expression of Results and Discussion	20	
Viva Voce		
Presentation	10	20
Discussion	10	

RUBRICS

Assignment/ Seminar

Maximum - 20 Marks (converted to 4 marks)

Criteria	4 Marks	3 Marks	2 Marks	1 Mark
Focus Purpose	Clear	Shows awareness	Shows little awareness	No awareness
Main idea	Clearly presents a main idea.	Main idea supported throughout	Vague sense	No main idea
Organisation: Overall	Well planned	Good overall organization	There is a sense of organization	No sense of organization
Content	Exceptionally well presented	Well presented	Content is sound	Not good
Style: Details and Examples	Large amounts of specific examples and detailed description	Some use of examples and detailed descriptions	Little use of specific examples and details	No use of examples

CLASS PARTICIPATION

Maximum -20 Marks (converted to 5 marks)

Criteria	5 Marks	4 Marks	3 Marks	2 Marks	1 Mark
Level of Engagement in Class	Student proactively contributes to class by offering ideas and asks questions more than once per class.	Student proactively contributes to class by offering ideas and asks questions once per class	Student contributes to class and asks questions occasionally	Student rarely contributes to class by offering ideas and asking no questions	Student never contributes to class by offering ideas
Listening Skills	Student listens when others talk, both in groups and in class. Student incorporates or builds off of the ideas of others.	Student listens when others talk, both in groups and in class.	Student listens when others talk in groups and in class occasionally	Student does not listen when others talk, both in groups and in class.	Student does not listen when others talk, both in groups and in class. Student often interrupts when others speak.
Behavior	Student almost never displays disruptive	Student rarely displays disruptive behavior	Student occasionally displays disruptive	Student often displays disruptive behavior	Student almost always displays disruptive

	behavior during class	during class	behavior during class	during class	behavior during class
Preparation	Student is almost always prepared for class with required class materials	Student is usually prepared for class with required class materials	Student is occasionally prepared for class with required class materials	Student is rarely prepared for class with required class materials	Student is almost never prepared for class.

COURSE NUMBER MTH1701	COURSE NAME MODERN ALGEBRA	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To provide sound foundation in linear Algebra , as well as understanding of the principles underlying in linear Algebra
- To prepare students to understand principles, concepts necessary to formulate, solve and analyze linear Algebra
- To prepare the students for further courses in higher mathematics and related disciplines

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate competence with the basic ideas of linear Algebra including the concepts of vector spaces, inner product spaces, modules and linear transformations	K2
CO2	Become familiar with the theorems and the characteristics of linear spaces and linear transformations	K3
CO3	Apply properties and theorems about linear spaces to specific mathematical structures that satisfy the linear space axioms	K4
CO4	Compose clear and accurate proofs using the concepts of linear Algebra	K5
CO5	Appreciate the significance of vector spaces and linear transformations	K6

CORE I – SEMESTER I**MODERN ALGEBRA (MTH1701)****Unit-I (17 hrs)**

Vector Spaces and Modules: Elementary basic concepts - Linear Independence and bases
- Dual spaces- Inner product Spaces

Unit-II (18 hrs)

Modules: Definition and examples- sub modules and direct sums-R homomorphisms and quotient modules-completely reducible modules- Free modules

Unit-III (17 hrs)

Linear Transformations: The algebra of linear transformations- characteristic roots -
Matrices

Unit-IV (16 hrs)

Canonical forms: Triangular form- nilpotent Transformation - A decomposition of V
Jordan form- Rational Canonical form

Unit-V (18 hrs)

Linear Transformations: Trace and transpose- Determinants - Hermitian-Unitary and normal transformation- real and Quadratic forms.

COURSE NUMBER MTH1702	COURSE NAME REAL ANALYSIS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To present students the elements and importance of the real analysis.
- To define and recognize the basic properties of the field of real numbers.
- To enable the students to the differentiability of real functions and its related theorems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe fundamental properties of the real numbers that lead to the formal development of real analysis	K2
CO2	Comprehend rigorous arguments developing the theory underpinning real analysis	K3
CO3	Demonstrate an understanding of limits and how they are used in sequences, series, differentiation and integration	K4
CO4	Construct various mathematical proofs of basic results in real analysis	K5
CO5	Appreciate how abstract ideas and various methods in mathematical analysis can be applied to important practical problems. Exhibits rigorous mathematical proofs in real analysis like inverse function theorem and the implicit function theorem	K6

CORE II – SEMESTER I

REAL ANALYSIS (MTH1702)

Unit I (18Hrs)

Riemann Stieltjes Integral: Definition and Existence of the integral - Properties of the integral - Integration and differentiation - Integration of vector valued function - Rectifiable curves.

Unit II (18 Hrs)

Uniform convergence and Continuity - Uniform convergence and Integration - Uniform convergence and Differentiation - Equi continuous Families of Functions-The Stone-Weierstrass theorem

Unit III (18Hrs)

Power Series - The Exponential and Logarithmic Functions - The Trigonometric Functions – The Algebraic completeness of the complex field- Fourier series- The Gamma Functions.

Unit IV (16 Hrs)

Functions of Several Variables - Linear Transformation - Differentiation - The Contraction Principle. The inverse function Theorem

Unit V (16Hrs)

The implicit Function Theorem-The Rank theorem-Determinants-Derivatives of higher order-Differentiation of Integrals

COURSE NUMBER MTH1703	COURSE NAME ORDINARY DIFFERENTIAL EQUATIONS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- Differential equations arise for many problems in oscillations of mechanical and electrical systems
- It plays a very important role in all modern scientific and engineering studies.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1.	Solve a variety of first order differential equations selecting from a variety of techniques	K2
CO2.	Solve a variety of second order differential equations, selecting from several techniques	K2
CO3.	Give series solutions (and approximations) for second order linear differential equations, both at ordinary points and at regular singular points	K3
CO4.	Understand and be able to use various theoretical ideas and results that underlie the mathematics in this course covered in the syllabus (including various existence/uniqueness results, ideas of linear independence and the Wronskian, and convergence properties of Fourier series).	K5
CO5.	Construct and apply symbolic and graphical representations of functions	K6

CORE III – SEMESTER I**ORDINARY DIFFERENTIAL EQUATIONS(MTH1703)****Unit I (16 hrs)**

Second order linear equations with ordinary points - Legendre equation and Legendre polynomials - Second order equations with regular singular points - Bessel equation.

Unit II (16 hrs)

Systems of first order equation - Existence and uniqueness theorem - Fundamental matrix.

Unit III (17 hrs)

Non-homogeneous linear systems - Linear systems with constant co-efficient - Linear systems with periodic co-efficients .

Unit IV (18 hrs)

Successive approximation - Picard's theorem - non-uniqueness of solutions - continuation and dependence on initial conditions - Existence of solutions in the large - existence and uniqueness of solutions of systems.

Unit V (19 hrs)

Fundamental results - Sturm's comparison theorem - Elementary linear oscillations- Comparison theorem of Hille-Winter oscillations of $X'' + A(t) X = 0$. Elementary non-linear oscillations.

COURSE NUMBER MTH1704	COURSE NAME MATHEMATICAL STATISTICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To enable the students to learn the different aspects of statistics.
- To provide them a systematic knowledge to analyze, organize, present and interpret any information effectively.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the basic concepts of statistics, probability and random variables	K ₂
CO2	Apply the concepts in finding the moments of the distributions	K ₃
CO3	Identify the type of the distribution	K ₄
CO4	Understand the basics of sampling distribution theory	K ₅
CO5	Emphasis on estimating a good estimate using unbiased, sufficient, efficient estimates	K ₆

CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

CORE IV – SEMESTER I**MATHEMATICAL STATISTICS (MTH1704)****Unit I****(16 Hrs)**

Limit Theorems: Preliminary remarks-Stochastic convergence-Bernoulli's law of large numbers- The convergence of a sequence of distribution functions - Levy Cramer theorem - De-Moivre Laplace theorem - Lindberg Levy theorem-Lapunov theorem.

Unit II**(17 Hrs)**

Markov chains: Preliminary remarks-Homogeneous Markov chains-The transition matrix-The Ergodic theorem- Random variables forming a homogenous Markov chain.

Unit III**(19 Hrs)**

Stochastic process: The notion of a stochastic process-Markov process and processes with independent increments-The Poisson process-The Furry-Yule process-Birth and death process-The Polya process-Kolmogorov equations.

Unit IV**(17 Hrs)**

Sample moments and their functions - The notion of the sample - The notion of a statistic - The distribution of the arithmetic mean of independent normally distributed random variables - The chi square distribution - The distribution of the statistic (X, S) - Student's t distribution - Significance tests - The concept of a statistical test - Parametric tests for small samples - Parametric tests for large samples - The chi square test- Independence test by contingency tables.

Unit V**(17 Hrs)**

Theory of estimation - Preliminary notions – Consistent – unbiased - sufficient and efficient estimates - asymptotically most efficient estimates - methods of finding estimates - Confidence intervals - Theory of hypothesis testing .

COURSE NUMBER MTH17E1	COURSE NAME ADVANCED NUMERICAL TECHNIQUES	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- To present students the Basic concepts of numerical methods.
- To introduce different methods for solving numerical related problems.
- To enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.	K2
CO2	Apply numerical methods to obtain approximate solutions to mathematical problems.	K3
CO3	Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.	K4
CO4	Analyse and evaluate the accuracy of common numerical methods.	K4
CO5	Implement numerical methods in various research problems	K5

Mapping with Programme Outcomes

S- Strong; M-Medium; L-Low

ELECTIVE I- SEMESTER I**ADVANCED NUMERICAL TECHNIQUES (MTH17E1)****Unit I****(16 hrs)**

Solution of non-linear equations: Newton's method - convergence of Newton's method- Bairstow method for quadratic factors - Numerical Differentiation And Integration: Derivatives from differentiation table-higher order derivatives - divided difference - central difference formulas - composite formula of trapezoidal rule - Romberg's integration - Simpson's rules.

Unit II**(16 hrs)**

Solution of system of equations: The elimination method - Gauss and Gauss Jordan methods - LU decomposition method - matrix inversion by Gauss - Jordan method - * Methods of iteration - Jacobi and Gauss Seidal iteration * - Relaxation method - Systems of non-linear equations.

Unit III**(17 hrs)**

Solution of ordinary differential equations: Taylor series method - Euler and modified Euler's methods - Runge-kutta methods - multistep methods - Milne's method - Adam's Moulton method -stiff equations.

Unit IV**(18 hrs)**

Boundary value problems and characteristic value problems: The shooting method - solution through a set of equations - derivative boundary conditions - characteristic value problems - Eigen values of a matrix by iteration - the Power method.

Unit V**(19 hrs)**

Numerical solution of partial differential equations: solutions of elliptic, parabolic and hyperbolic partial differential equations - Representation as a difference equation - Laplace equation - the Poisson equation - Derivative boundary conditions - Solving the equation for time - dependent heat flow (1) The Explicit method (2) The Crank Nicolson method - solving the wave equation by finite differences.

COURSE NUMBER MTH17E2	COURSE NAME GRAPH THEORY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- To present students the Basic concepts of graph theory.
- To enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Understanding of some network and colouring in Graph theory .	K2
CO2	Apply the understanding and used to model the atomic variable .	K3
CO3	Apply the concepts of connectivity, Blocks and Hamilton cycles in the real life.	K4
CO4	Demonstrate the concept and familiar with the concepts of colouring develop the reader to apply in day today life .	K5
CO5	Emphasis on some of the concepts in graph theory and the readers to apply in day today life.	K5

ELECTIVE II- SEMESTER I**GRAPH THEORY (MTH17E2)****Unit I (16 hrs)**

Graphs, Subgraphs And Trees: Graphs and simple graphs – Graph isomorphism – The incidence and adjacency matrices – Subgraphs – Vertex degrees – Paths and connection cycles
Trees- Cut edges and Bonds – Cut vertices – Cayley's formula.

Unit II (16 hrs)

Connectivity, Euler Tours And Hamilton Cycles: Connectivity – Blocks- Euler tours – Hamilton cycles.

Unit III (18 hrs)

Matchings and Edge Colourings: Matchings – Matchings coverings in bipartite graphs – Perfect matching – Edge chromatic number – Vizings theorem.

Unit IV (18 hrs)

Independent Sets, Cliques And Vertex Colourings: Independent sets- Ramsey's theorem- Chromatic number – Brook's theorem – Hajos conjecture theorem – Chromatic polynomials – Girth and chromatic number.

Unit V (18 hrs)

Planar Graphs And Directed Graphs: Plane and planar graphs – Dual graphs – Euler's formula- bridges – Kuratowski's theorem (proof omitted) – The five colour theorem and the four colour conjecture – NonHamiltonian planar graphs – Directed graphs – Directed paths – Directed cycles.

COURSE NUMBER MTH1705	COURSE NAME ADVANCED ALGEBRA	CATEGORY	L	T	P	CREDIT
		CORE	71	4	-	4

Preamble

- To provide sound foundation in advanced Algebra , as well as understanding of the principles underlying in Advanced Algebra
- To prepare students to understand principles, concepts necessary to formulate, solve and analyze advanced Algebra
- To prepare the students for further courses in higher mathematics and related disciplines

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate competence with the basic ideas of algebra including the concepts of direct products, finitely generated abelian groups, Fields , extension fields , Galois theory and finite fields	K2
CO2	Demonstrate knowledge of the structures of fields ,extension fields and finite fields	K3
CO3	Apply the knowledge in solving problems in different areas in Algebra	K4
CO4	Present clear and logical mathematical arguments	K5
CO5	Appreciate the significance Sylow's theorem and Galois theory	K6

CORE V – SEMESTER II**ADVANCED ALGEBRA (MTH1705)****Unit-I (14 hrs)**

Structure theorems of groups: direct products- finitely generated abelian groups - Invariants of a finite abelian group- Sylow's theorems - Groups of orders p^2 , pq .

Unit-II (14 hrs)

Fields: Extension Fields - The Transcendence of e , Roots of polynomials.

Unit-III (14 hrs)

Fields: More about roots- The elements of Galois Theory - fundamental theorem of Galois Theory

Unit-IV (15 hrs)

Fields: Solvability by Radicals - Galois groups over the Rationals - Finite fields

Unit-V (14 hrs)

Applications of Galois theory to classical problems: Roots of unity and cyclotomic polynomials, cyclic extensions, polynomials solvable by radicals, symmetric functions, ruler and compass constructions

COURSE NUMBER MTH1706	COURSE NAME LEBESGUE MEASURE THEORY	CATEGORY	L	T	P	CREDIT
		CORE	71	4	-	4

Preamble

- To introduce the concepts of measure and integral with respect to a measure, to show their basic properties, and to provide a basis for further studies in Analysis, Probability, and Dynamical Systems.
- To construct Lebesgue's measure on the real line and in n -dimensional Euclidean space. To explain the basic advanced directions of the theory.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describes the basics axioms for the real numbers, natural and rational numbers as subset. Demonstrate the basic concepts underlying the definition of the general Lebesgue integral.	K2
CO2	Derives the concepts of Borel sets, measurable functions, differentiation of monotone functions	K3
CO3	Analyse about the little wood's theorem, integral of a non-negative function, functions of bounded variation	K4
CO4	Construct a clear idea about convergence in measure, differentiation of an integral, absolute continuity and convex functions	K5
CO5	Apply the theory of the course to solve a variety of problems at an appropriate level of difficulty	K6

CORE VI – SEMESTER II

LEBESGUE MEASURE THEORY(MTH1706)

Unit I

(14Hrs)

The Real number system: Axioms for the real numbers- The natural and rational numbers as subset of \mathbb{R} -The extended real numbers-Sequence of real numbers-open and closed sets of real numbers-continuous functions-Borel sets.

Unit II

(14Hrs)

Lebesgue Measure: Outer measure - Measurable sets and Lebesgue measure - Measurable functions - The Little wood's theorem.

Unit III

(15Hrs)

The Lebesgue Integral: The Lebesgue integral of a bounded function over a set of finite measure - Integral of a non-negative function - General Lebesgue integral - Convergence in measure.

Unit IV

(14 Hrs)

Differentiation and Integration: Differentiation of monotone functions-Functions of bounded variation-Differentiation of an integral - Absolute continuity-Convex functions

Unit V

(14 Hrs)

The classical banach spaces: the L^p spaces- The Minkowski and holder inequalities- Convergence and completeness-Approximation in L^p .

COURSE NUMBER MTH1707	COURSE NAME PARTIAL DIFFERENTIAL EQUATIONS	CATEGORY	L	T	P	CREDIT
		CORE	71	4	-	4

Preamble

- To present students the elements of the theory of partial differential equation.
- To introduce different methods for solving partial differential equation.
- To enable the students to find solution of partial differential equation of practical application like engineering, physics etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Enumerate the basic concepts of first and second order partial differential equation of and different methods of solving pde's	K2
CO2	Classify PDEs, apply analytical methods, and physically interpret the solutions.	K3
CO3	Formulate, analyse and validate mathematical models of practical problems related to other fields.	K4
CO4	Investigate boundary values problems and point out its significance	K5
CO5	Use knowledge of partial differential equations for modelling the general structure of solutions and using analytic methods for solutions.	K6

Mapping with Programme Outcomes

CORE VII – SEMESTER II**PARTIAL DIFFERENTIAL EQUATIONS (MTH1707)****Unit I (15 Hrs)**

Nonlinear Partial Differential Equations of the first order - Cauchy's method of Characteristics - Compatible System of First order equations- Charpit's method - Special types of First Order equations - Jacobi's method.

Unit II (14 Hrs)

Partial Differential Equations of second order - The origin of Second-order Equations - Linear Partial Differential Equations with constant coefficients – Equations with variable coefficients

Unit III (14 Hrs)

The solution of Linear Hyperbolic Equations - Separation of variables – The Method of integral transforms - Non linear Equation of the second order.

UNIT IV (14 Hrs)

Laplace's equation - The occurrence of Laplace's Equation in Physics - Elementary solution of Laplace's Equation - Families of Equipotential surfaces - Boundary value problems - Separation of variables - Problems with axial symmetry.

Unit V (14 Hrs)

The wave Equation -The occurrence of wave equation in physics – Elementary solution of the one-dimensional wave equation - Vibrating Membranes: Application of the calculus of variations -Three dimensional problems. The diffusion equations: Elementary solutions of the diffusion Equation - Separation of variables - the use of Integral transforms.

COURSE NUMBER MTH1708	COURSE NAME MECHANICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To develop familiarity with the physical concepts and facility with the mathematical methods of classical mechanics.
- To represent the equations of motion for complicated mechanical systems using the Lagrangian and Hamiltonian formulation of classical mechanics.
- To develop skills in formulating and solving physics problems

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the knowledge of core principles in mechanics	K2
CO2	Interpret complex and difficult problems of classical dynamics in a systematic way	K3
CO3	Apply the variation principle for real physical situations	K4
CO4	Identify the existing symmetries and the corresponding integrals of motion and analyze the qualitative nature of dynamics	K5
CO5	Explore problem solving skills (approach, estimation, computation, and analysis) of classical mechanics in various contexts such as mechanical engineering, astrophysics, and biophysics.	K6

CORE VIII – SEMESTER II

MECHANICS (MTH1708)

UNIT I (18 hrs)

Introductory concepts: Mechanical system - generalized coordinates – constraints - virtual work - energy and momentum.

UNIT II (17 hrs)

Lagrange's equations: Derivations of Lagrange's equations – examples - integrals of motion.

UNIT III (17 hrs)

Hamilton's equations: Hamilton's principles - Hamilton's equations - other variational principles.

UNIT IV (17 hrs)

Hamilton – Jacobi theory: Hamilton's principle function - Hamilton - Jacobi equation - Separability.

UNIT V (17 hrs)

Canonical transformations: Differential forms and generating functions - Lagrange and Poisson brackets.

COURSE NUMBER MTH17E3	COURSE NAME CONTROL THEORY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	4

Preamble

- The objective of this course is to introduce some fundamental concepts of control system including state space techniques, optimal control, stability analysis and controllability.
- The course is intended to provide students with confidence in own abilities to analyze and design a new control system.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe the basic concepts and properties of differential equations, fundamental concepts of control system	K2
CO2	Understand about concept of observable and controllable system.	K3
CO3	Ability to analyze and design a new control system.	K4
CO4	Analyze the system stability, equilibrium points, linear system stability	K5
CO5	Apply optimal control to statement of the optimal control problems and interpret the problems	K6

ELECTIVE – SEMESTER II
CONTROL THEORY (MTH17E3)

Unit I (12 Hrs)

Observability: Linear systems - Observability Grammian - Constant coefficient systems - Reconstruction Kernel - Nonlinear Systems.

Unit II (11 Hrs)

Controllability: Linear Systems - Controllability Grammian - Adjoint Systems - Constant coefficient systems - Steering function - Nonlinear systems.

Unit III (11 Hrs)

Stability: Stability - Uniform Stability - Asymptotic Stability of Linear Systems - Linear time varying systems - Perturbed linear systems- Nonlinear systems.

Unit IV (11 Hrs)

Stabilizability: Stabilization via linear feedback control - Bass method - Controllable subspace - Stabilization with restricted feedback.

Unit V (11 Hrs)

Optimal Control: Linear time varying systems with quadratic performance criteria - Matrix Riccati equation - Linear time invariant systems - Nonlinear Systems.

COURSE NUMBER MTH17E4	COURSE NAME FUZZY LOGIC AND ARTIFICIAL INTELLIGENCE	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	4

Preamble

- To introduce the concepts of Fuzzy logic and Artificial Intelligence
- To acquire the knowledge of Linear Algebra based methods in terms of computational speed and associated accuracy
- It provides a good outline of a model to a complex problem and draws an appropriate boundary around the concept

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the basic concepts of fuzzy sets and membership functions , Know various AI search algorithms	K ₂
CO2	Ability to find examples for crisp equivalence relation	K ₃
CO3	Applying the concept in Max-min method	K ₃
CO4	Understand the fundamentals of knowledge representation (logic-based, frame-based, semantic nets), inference	K ₄
CO5	Ability to apply knowledge representation, reasoning, and machine learning techniques to real-world problems	K ₅

ELECTIVE – SEMESTER II**FUZZY LOGIC AND ARTIFICIAL INTELLIGENCE (MTH17E4)****Unit-I****(12 Hrs)**

Introduction - Fuzzy sets and membership - Chance versus Fuzziness - Sets as points in Hypercubes - Classical sets and fuzzy sets : Classical sets - Operations as a classical sets - Properties of Classical sets - Mapping of classical sets to functions - Fuzzy sets : Fuzzy set operations - Properties of Fuzzy Sets - Alternative Fuzzy sets operations.

Unit-II**(11 Hrs)**

Classical relations and fuzzy relations: Cartesian products - Crisp relations : Cardinality of crisp relations - operations on crisp relations - Properties of crisp relations - Composition - Fuzzy relations : Cardinality of fuzzy relations - operations on fuzzy relations - Properties of fuzzy relations - Fuzzy cartesian products and composition - Tolerance and equivalence relations: Crisp equivalence relation - Crisp tolerance relation - Fuzzy tolerance and equivalence relations - Value assignments: Cosine amplitude - Max-Min method.

Unit-III**(11 Hrs)**

Properties of membership functions, Fuzzification and Defuzzification: Features of membership function - Various forms - Fuzzification - Defuzzification to crisp sets - λ - cuts for fuzzy relations - Defuzzification to scalars - Logic and Fuzzy system: Classical logic - proof - Fuzzy logic.

Unit-IV**(11 Hrs)**

Artificial intelligence - The AI problems - The underlying assumptions - AI techniques - Level of the model - Problems, problem spaces and search: Defining the problem as a state space search - Production systems - Problem Characteristics - Production system characteristics - Heuristic search techniques: Generate - and - test - Hill climbing - Best-First search - problem reduction - Constraint satisfaction - Means-Ends analysis.

Unit-V**(11 Hrs)**

Knowledge representation issues: Representation and mappings - Approaches to knowledge representation - Issues in knowledge representation - The frame problem - Using predicate logic: Representing simple facts in logic - Representing instance and Isa relationships - Computable functions and predicates - resolution - Natural deduction - Representing knowledge using rules: Procedural versus Declarative knowledge - Logic programming - Forward versus backward reasoning - Matching - Control knowledge.

COURSE NUMBER MTH16A3	COURSE NAME QUANTITATIVE TECHNIQUES FOR COMMERCE	CATEGORY	L	T	P	CREDIT
		IDC	75	-	-	5

Preamble

- To present the Basic concepts of Statistics.
- To introduce different methods for solving statistical method and operation research.
- Enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Identify the source of quantifiable problems, recognize and solve. Understand and apply basic concepts and describe mathematical relations and functions.	K2
CO2	Apply the concepts of Quantitative Techniques to solve the problems.	K3
CO3	Determine the correct statistical method and optimization techniques to analyze and evaluate the problems.	K4
CO4	Formulate and interpret the problems by available techniques.	K5
CO5	Evaluate problems by using statistical method and optimization techniques. Apply quantitative techniques to commercial problem and analyze the results.	K6

Mapping with Programme Outcomes

CO5	S	S	S	S	S

S- Strong; M-Medium; L-Low

Syllabus

M.Com – IDC - QUANTITATIVE TECHNIQUES FOR COMMERCE (MTH16A3)

Unit I (12 Hrs)

Quantitative approach to management - Sets - events - Probability - additions and multiplication theories - conditional probability - Mathematical expectation - Baye's theories.

Unit II (15 Hrs)

Binomial - Poisson and normal distribution (without derivations & proof - properties). Fitting of these distributions - Correlation - Rank correlation - Regression and regression lines on x and y.

Unit III (15 Hrs)

Test of significance - Large sample test - small sample test - application of chi - Square test - 't' & 'F' distribution.

Unit IV (15 Hrs)

Operation research : origin - meaning - definition - model - Phases - general linear programming - graphical method - simplex method (slack) variable - Transportation problem - method of initial & optimum solutions.

Unit V (18 Hrs)

Queuing theory: Problems from single server - finite and infinite population. Assignment and traveling salesman problems - Network analysis - critical path method - PERT.

COURSE NUMBER MTH17A5	COURSE NAME STATISTICAL TECHNIQUES IN PRACTICE	CATEGORY	L	T	P	CREDIT
		IDC	60	-	-	4

Preamble

- To present students the Basic concepts of numerical methods.
- To introduce different methods for solving operation research..
- To enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.	K2
CO2	Have a deeper knowledge of the use of statistical methods in empirical applications, be able to interpret, analyse, and critically evaluate results on the basis of scientific and ethical considerations	K3
CO3	An ability critically, independently, and creatively to identify and formulate problems of significance for statistical science	K4
CO4	Have a mental habit of logical thinking, and familiarity with the tactics of problem solving. Students will be able to estimate the solution to a problem, apply appropriate techniques to arrive at a solution, test the correctness of the solution, and interpret their results	K4
CO5	Identify, formulate, abstract, and solve mathematical problems that using a tools from a variety of mathematical areas, including optimization, probability, and understanding how the relate to problems from other areas of science, engineering and management.	K5

Syllabus

M.Sc (CS/IT) – IDC - STATISTICAL TECHNIQUES IN PRACTICE (MTH17A5)

Unit I

(12 Hrs)

Solution of ordinary differential equations : Taylor series method-Euler and modified Euler's methods-Runge-kutta methods for 1st order - multistep methods-Milne's method- Adam's Moulton method .

Unit II

(12 Hrs)

Theoretical Distributions: Binomial Distribution - Poisson distribution - Normal Distribution. Testing of hypothesis: Test of significance for large samples and small samples.

Unit III

(12 Hrs)

Chi-Square Distributions and Goodness of fit- F-test - Analysis of Variance (ANOVA): One-way Classification - Two-way Classification.

Unit IV

(12 Hrs)

Linear Programming:Introduction to Linear Programming - LPP Formulation - Graphical Method - Simplex Method - Big M Method - Two Phase Simplex Method - Dual Simplex Method.

Unit V

(12 Hrs)

Simulation Modelling: Monte Carlo Simulation - Types of Simulation - Elements of Discrete Event Simulation - Generation of Random Numbers.

Syllabus

Semester II- M.Sc (Physics)- IDC

TENSOR & NUMERICAL METHODS (MTH16A4)

Unit I **(9Hrs)**

Tensor Analysis Definition of Tensors - Contravariant - covariant and mixed tensors - addition and subtraction of Tensors - Summation convention - Symmetry and Anisymmetry Tensor - Contraction and direct product - Quotient law.

Unit II **(9Hrs)**

Numerical solutions of Algebraic and Transcendental Equation: Method of False position(Regula Falsi method) -Newton -Raphson Method -Solution of Simultaneous Linear Algebraic Equations: Gauss Elimination Method -Interpolation with equal intervals: Gregory - Newton's forward interpolation formula for Equal Intervals - Gregory -Newton's Backward interpolation formula for Equal Intervals - Interpolation with unequal Intervals: Lagrange's Interpolation Formula for unequal Intervals - Method of Least Squares: Fitting a straight line - Fitting a Second Degree Parabola.

Unit III **(9 Hrs)**

Numerical Differentiation: Values of the derivatives of y - based on Newton's Forward Interpolation formula - Values of the derivatives of y - based on Newton's Backward Interpolation formula.

Unit IV **(9 Hrs)**

Numerical integration: Newton -Cote's Quadrature Formula - Trapezoidal rule - composite trapezoidal rule - Simpson's one - third rule - composites Simpson's one - third rule - Simpson's three - eighths rule - composite Simpson's three eights rule.

Unit V **(9 Hrs)**

Numerical solutions of ordinary differential equations: Euler's method - Runge -Kutta formulas of first and second order - Runge - Kutta formulas of the third and fourth order - Runge Kutta formula for the solution of second order differential equation.

COURSE NUMBER MTH1609	COURSE NAME COMPLEX ANALYSIS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To present students the elements and importance of the Complex analysis.
- To define and recognize the basic properties of the complex numbers.
- To enable the students to the differentiability of complex functions and its related theorems.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe fundamental properties of the complex numbers that lead to the development of complex analysis	K2
CO2	Evaluate line integrals, curve integrals, singularities and determine the values of integrals using residues.	K3
CO3	Apply and understand about limits and to know how they are used in series and problems	K4
CO4	Analyze functions of complex variable in terms of continuity, differentiability and analyticity. Apply Cauchy-Riemann equations and harmonic functions to solve problems	K5
CO5	Comprehend rigorous arguments developing the theory underpinning complex analysis	K5

CORE IX - SEMESTER III**COMPLEX ANALYSIS (MTH1609)****Unit I****(16Hrs)**

Introduction to the concept of analytic function: Limits and continuity - Analytic functions- Polynomials - Rational functions - Conformality: Arcs and closed Curves - Analytic functions in regions - Conformal Mapping - Length and Area - Linear Transformations: The Linear group - The Cross-ratio - Elementary Riemann Surfaces.

Unit II**(17 Hrs)**

Complex integration: Line integrals Rectifiable Arcs - Line Integrals as Functions of Arcs- Cauchy's theorem for a rectangle - Cauchy's theorem in a disk - Cauchy's integral formula: The index of a point with respect to a closed curve - The integer formula - Higher derivatives - Removable singularities - Taylor's Theorem - Zeros and Poles - The local mapping - The Maximum Principle - chains and cycles.

Unit III**(17 Hrs)**

The Calculus of Residues: The Residue theorem - The Argument principle - Evaluation of definite integrals - Harmonic functions: The Definitions and basic Properties - Mean value property - Poisson's Formula.

Unit IV**(17 Hrs)**

Series and Product Developments: Weierstrass theorem - The Taylor Series - The Laurent Series - Partial fractions and Factorization: Partial Fractions - Infinite Products - Canonical Products.

Unit V**(19 Hrs)**

The Riemann Mapping Theorem - Statement and Proof- Boundary Behavior - Use of the reflection principle - Analytic arcs - Conformal mapping of Polygons: The Behavior at an angle - the Schwartz - Christoffel Formula - Mapping on a rectangle.

COURSE NUMBER MTH1610	COURSE NAME TOPOLOGY	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- Students will learn the fundamental concepts of point-set topology.
- Introduce students to the concepts of open and closed sets abstractly, not necessarily only on the real line approach.
- Provide the awareness of tools to students to carrying out advanced research work in pure mathematics

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Define and illustrate the concept of topological spaces and continuous functions, concept of product topology and quotient topology	K2
CO2	Identify the concepts of distance between two sets, connectedness, denseness, compactness and separation axioms.	K3
CO3	Analyze the concepts to read and write theorem proofs in topology	K4
CO4	Ability to determine that a given point in a topological space is either a limit point of not for a given subset of a topological space.	K5
CO5	Apply theorem proofs to do variety of examples and counter examples in topology	K5

CORE X – SEMESTER III

TOPOLOGY (MTH1610)

Unit I (18 Hrs)

Topological Spaces - Basis for a Topology - The Order Topology - Closed Sets and Limit Points - Continuous Functions - Product Topology - Metric Topology.

Unit II (17 Hrs)

Connectedness and Compactness: Connected Spaces - Connected sets in \mathbb{R} - Components and Path Components - Local Connectedness - Compact Spaces - Limit Point Compactness - Local Compactness.

Unit III (15 Hrs)

Countability and Separation Axioms: Countability Axioms - Separation Axioms - Urysohn's Lemma – Urysohn Metrization Theorem.

Unit IV (17 Hrs)

The Tychonoff Theorem - Completely Regular spaces - The Stone-Cech Compactification.

Unit V (19 Hrs)

Complete Metric Spaces - Compactness in Metric Spaces - Point-wise and Compact Convergences - Ascoli's Theorem - Baire spaces.

COURSE NUMBER MTH1611	COURSE NAME BASICS OF CRYPTOGRAPHY	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- Gain cyber security skills required for senior level careers by focusing on principles and best management techniques.
- Provides a deeper understanding into cryptography, its application to network security, threats/vulnerabilities to networks and countermeasures.
- To work for financial institutions and consultancies, and as security specialists within a wide range of companies and R&D organizations.

Course Outcomes

Upon the successful completion of course, the students will be able to

CO No.	CO Statement	Knowledge level
CO1	Understand the basic concept of Cryptography and Network Security, their mathematical models.	K ₂
CO2	Understand mathematical foundation required for various cryptographic Algorithms. Identify and classify computer and security threats	K ₃
CO3	Describe and analyze existing authentication protocols for two party communications.	K ₄
CO4	Examine the issues and structure of Authentication Service and Electronic Mail Security, web security and IP security.	K ₅
CO5	Develop a security model to prevent, detect and recover from attacks.	K ₆

CORE XI – SEMESTER III

BASICS OF CRYPTOGRAPHY (MTH1611)

Unit I

(19 hrs)

Introduction to Information Security: Introduction, security, critical characteristics of information, NSTISSC security model, components of an information system, security components, Approaches to information security implementation. The system development life cycle, The Security System Development life cycle. **The need for security:** Business needs first, threats, attacks, secured software development.

Cryptography : Basic concepts of cryptography, Cryptograph tools. Authentication, Passwords, keys versus passwords, Attacking Systems via passwords, Password verification.

Unit II

(19 hrs)

Classical Encryption Techniques; Symmetric cipher model, substitution techniques, Transposition Techniques. Block Ciphers and the Data Encryption Standard: Block cipher principles, the data encryption standard, the strength of DES.

Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorem, Testing for primality, Miller-Rabin Algorithm. Chinese Remainder Theorem, Discrete Logarithms, Algorithms. (Except Problems)

Unit III

(18 hrs)

Public Key Cryptosystems : Principles of public, key cryptography, public, key cryptosystems, Applications for public ,key cryptosystems, Requirements for public , key cryptography, public, key cryptanalysis, RSA Algorithm, Description of the Algorithm, Computational Aspects, Security of RSA.

Key Management: Diffie – Hellman Key Exchange – Algorithm, Key exchange protocols, Elliptic Curve Arithmetic, Elliptic Curve cryptography. (Except Problems)

Unit IV

(15 hrs)

Digital Signatures and Authentication Protocols : Requirements, Direct Digital Signature, Arbitrated Digital Signature, Authentication Protocols, Mutual Authentication, One Way Authentication, Digital Signature Standard, DSS Approach and Digital Signature Algorithm (Except Problem)

Unit V

(15 hrs)

Virus: Viruses and Related threats, Virus Countermeasure

Fire Walls: Firewalls, Types of Firewall, Design Principles of Firewall, Trusted Systems.

COURSE NUMBER MTH1612	COURSE NAME FLUID DYNAMICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To familiarize the students with basic concepts of Fluid Dynamics as the subject has got application in medical, astrophysical, geophysical, agricultural, aero dynamical and other related disciplines.
- To develop the problem-solving skills essential to fluid dynamics in practical applications.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Understand the fundamental knowledge of fluids and its properties	K2
CO2	Describe the concepts and equations of fluid dynamics	K3
CO3	Apply thermodynamic control volume concepts in fluid dynamics for applications that include momentum, mass and energy balances	K4
CO4	Analyze the approximate solutions of the Navier-Stokes equation	K5
CO5	Appreciate the role of fluid dynamics in day-to-day life	K6

CORE XII – SEMESTER III
FLUID DYNAMICS (MTH1612)

Unit-I**(16 hrs)**

Introductory Notions - Velocity - Streamlines and path lines - Stream tubes and filaments - Fluid body - Density - Pressure - Differentiation following the fluid - Equation of continuity - Boundary condition - Kinematical and physical - Rate of change of linear momentum - Equation of motion of an inviscid fluid.

Unit-II**(18 hrs)**

Euler's momentum theorem - conservative forces - Bernoulli's theorem in steady motion - Energy equation for inviscid fluid - Circulation - Kelvin's theorem - Vortex motion - Helmholtz equation.

Unit-III**(18 hrs)**

Two dimensional motion - Two dimensional functions - Complex potential - basic singularities - Source and sink vortex - Doublet - circle theorem - flow past a circular cylinder with circulation - Conformal transformation - Blasius theorem - Lift force .

Unit-IV**(17 hrs)**

Viscous flows - Navier-stokes equations - Vorticity and circulation in a viscous fluid - Steady flow through an arbitrary cylinder under pressure - Steady Couette flow between cylinders in relative motion - Steady flow between parallel planes.

Unit-V**(17 hrs)**

Laminar boundary layer in incompressible flow - Boundary layer concept - boundary layer equations - displacement thickness - momentum thickness - kinetic energy thickness - integral equation of boundary layer - flow parallel to semi infinite flat plate - Blasius equation and its solution in series.

SEMESTER III – SPECIAL PAPER

RESEARCH METHODOLOGY (MTH08S1)

Credits : 2

Total duration : 28 Hrs

Objective

To motivate the students in Research Oriented Topics.

Unit I (5 Hrs)

What is research in Mathematics - Fixing an area for research - Proof Techniques - Pure and applied Mathematics research - Articles (Popular, Technical, Review, Survey), Magazines, Journals -Mathematical and Statistical Software's (free and commercial) – Mathematical - Statistical Societies (National and International) - Prizes and Medals in Mathematics.

Unit II (6 Hrs)

Dissertation - Thesis - Expository - Research Paper - Abstract - Review - Referee Components of Dissertation and Thesis - the Internet - Web sites related To mathematical articles and softwares.

Unit III (6 Hrs)

Text, Symbols, and Commands: Command names and arguments -Environments -Declarations - Lengths -Special characters -Fine-tuning text - Word division
Document Layout and Organization: Document class - Page style - Parts of the document - Table of contents

Unit IV (6 Hrs)

Displayed Text: Changing font - Centering and indenting - Lists - Generalized lists - - Theorem-like declarations - Tabulator stops - Boxes - Tables - Printing literal text - Footnotes and marginal notes - Comments within text.

Mathematical Formulas: Mathematical environments - Main elements of math mode - Mathematical symbols Additional elements - Fine-tuning mathematics

Unit V (5 Hrs)

PostScript and PDF : LATEX and PostScript - Portable Document Format

Math Extensions with AMS-LATEX : Invoking AMS-LATEX - Standard features of AMS-LATEX - Further AMS-LATEX packages - The AMS fonts

COURSE NUMBER MTH16E5	COURSE NAME MATHEMATICAL MODELLING	CATEGORY	L	T	P	CREDIT
		CORE	56	4	-	4

Preamble

- To enable the students to learn mathematical concepts
- To build mathematical models of real-world systems, analyze them and make predictions about behavior of these systems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO No	CO Statement	Knowledge Level
CO1	Understand the importance of Mathematical modeling in the real world	K2
CO2	Assess and articulate what type of modeling techniques are appropriate for a given physical system	K3
CO3	Construct a mathematical model of a given physical system and analyze it, make predictions	K4
CO4	Compose the findings from the methods applied for the problem	K5
CO5	Formulate, analyze and simulate mathematical models	K6

Mapping with Programme Outcomes

ELECTIVE V – SEMESTER III**MATHEMATICAL MODELLING (MTH16E5)****Unit-I****(11 hrs)**

Mathematical Modeling through Systems of Ordinary differential Equations of the First Order : Mathematical modeling in population dynamics, *Mathematical modeling in Arms Race, Battles and international Trade in terms of systems of ordinary differential equations*-
Mathematical modeling in dynamics through systems of ordinary differential equations of first order.

Unit-II**(11 hrs)**

Mathematical Modeling through difference equations: The need for Mathematical modeling through difference equations - Some simple models - Basic theory of linear difference equations with constant coefficients - Mathematical modeling through difference equations in economics and finance.

Unit-III**(11 hrs)**

Mathematical Modeling through difference equations (contd.): Mathematical modeling through difference equation in population dynamics and genetics - Mathematical modeling through difference equations in probability theory - Miscellaneous examples of mathematical modeling through difference equations.

Unit-IV**(12 hrs)**

Mathematical modeling through Graphs: Situations that can be modeled through graphs –
Mathematical models in terms of directed graphs - mathematical models in terms of signed graphs
- Mathematical models in terms of weighted graphs.

Unit-V**(11 hrs)**

Mathematical Modeling through calculus of Variations and Dynamic Programming :
Optimization principles and techniques - Mathematical modeling through calculus of variations –
Mathematical Modeling through dynamic programming.

COURSE NUMBER MTH16E6	COURSE NAME DIFFERENCE EQUATIONS	CATEGORY	L	T	P	CREDITS
		ELECTIVE	56	4	-	4

Preamble

- To introduce the process of discretization, Discrete version of Difference Equations, Discrete oscillation and the asymptotic behaviour of solutions of certain class of difference equations for linear cases only. Solution of difference equations using z-transforms is stressed.
- To enable the students to understand classical and modern treatments of difference equations for engineering and physical sciences.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Acquire knowledge of various concepts of difference equations	K2
CO2	Understand and be able to communicate the underlying mathematics using difference equations	K3
CO3	Develop strategies using mathematical methods to solve real world problems	K4
CO4	Apply deductive reasoning and critical thinking to solve problems	K5

ELECTIVE VI - SEMESTER III

DIFFERENCE EQUATIONS (MTH16E6)

Unit I

(12 Hrs)

Linear difference equations of higher order: Difference Calculus General Theory of Linear Difference Equations -Linear Homogeneous Equations with Constant coefficients -Linear non-homogeneous equations-Method of Undetermined coefficients, the method of variation of constants -Limiting behavior of solutions

Unit II

(11 Hrs)

System of difference equations: Autonomous System -The Basic Theory -The Jordan form -Linear periodic system

Unit III

(11 Hrs)

The Z-transform method: Definition, Example and properties of Z-transform -The Inverse Z-transform and solution of Difference Equations: Power series method, partial fraction method, the inverse integral method -Volterra Difference Equation of convolution types –Volterra systems

Unit IV

(11 Hrs)

Asymptotic behaviour of difference equation: Tools and Approximations -Poincare's Theorem - Second order difference equations -Asymptotic diagonal systems -Higher order Difference Equations.

Unit V

(11 Hrs)

Oscillation theory: Three-term difference Equation -Non-linear Difference Equations -Self-Adjoint second order equations.

COURSE NUMBER MTH1613	COURSE NAME FUNCTIONAL ANALYSIS	CATEGORY	L	T	P	CREDITS
		CORE	86	4	-	4

Preamble

- Students will learn the basic concepts and theorems of functional analysis and its applications.
- The student is able to apply knowledge of functional analysis to solve mathematical problems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe properties of normed linear spaces and construct examples of such spaces	K2
CO2	Apply basic theoretical techniques to analyze linear functionals and operators on Banach and Hilbert spaces.	K3
CO3	Apply orthonormality to Fourier series expansions of functions	K4
CO4	Apply theorems to do problems	K5

CORE PAPER XIII - SEMESTER IV

FUNCTIONAL ANALYSIS (MTH1613)

Unit I (18 Hrs)

Banach spaces - The definition and some example - Continuous linear transformations - The Hahn -Banach theorem - The natural imbedding of N in N^{**} - The open mapping theorem - The Closed graph theorem.

Unit II (17 Hrs)

The conjugate of an operator - Hilbert spaces - Definition and some simple properties - Orthogonal complements - Orthonormal sets.

Unit III (17 Hrs)

The Conjugate space H^* - The adjoint of an operator - Self adjoint operators - Normal and unitary operators - Projections.

Unit IV (16 Hrs)

Matrices - Determinants and the spectrum of an operator - The spectral theorem.

Unit V (18 Hrs)

The definition and some examples of Banach algebras - Regular and singular elements - Topological divisors of zero - The spectrum - The formula for the spectral radius.

COURSE NUMBER MTH1614	COURSE NAME MATHEMATICAL	CATEGORY	L	T	P	CREDITS
	METHODS	CORE	86	4	-	4

Preamble

- To give an introduction to mathematical methods for solving hard mathematics problems that arises in the sciences.
- To give an experience in the implementation of Mathematical concepts like integral transforms, integral equations and calculus of variations in various field of Engineering.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Acquire knowledge of various mathematical concepts and techniques required for successful application of mathematics in physics and related sciences	K2
CO2	Apply various transforms and integral equations to solve multidisciplinary application problems	K3
CO3	Recognize and solve particular cases of Fredholm and Volterra integral equations and variational problem by constructing an appropriate functional, and solving the Euler-Lagrange equations.	K4
CO4	Demonstrate the ability to present their results	K5
CO5	Develop strategies using mathematical methods to solve real world problems	K6

CORE PAPER XIV - SEMESTER IV**MATHEMATICAL METHODS (MTH1614)****Unit-I (17 hrs)**

Fourier transforms: Fourier sine and cosine transforms - Fourier transform of derivatives - Fourier transform of simple functions - Convolution integral - Parseval's Theorem - Solution of PDE by Fourier transforms - Laplace equation in half plane – Laplace equation in an infinite strip- Laplace equation in semi infinite stripe - The Linear diffusion equation on a semi infinite line - The two dimensional diffusion equation.

Unit-II (17 hrs)

Hankel Transforms: Properties of Hankel transforms - Hankel inversion theorem of derivatives of functions (proof is omitted) - The Parseval's relation - Relation between Fourier and Hankel transforms - Axisymmetric Dirichlet problem for a half space - Axisymmetric Dirichlet problem for a thick plate.

Unit-III (15 hrs)

Integral equations: Type of integral equations - Integral Fredholm alternative - approximate Method - Equation with separable Kernel - Volterra integral equations - Fredholm's theory - Fredholm's First - second and third theorems.

Unit-IV (18 hrs)

Application of integral equation to ordinary differential equation - Initial value problems - Boundary value problems - Singular integral equations - Abel integral equation.

Unit-V (19 hrs)

Calculus of Variations: Variation and its properties - Euler's equation - Functionals of the integral form - Functional dependent on higher order derivatives - Functionals dependent on the Functions of several independent variable - Variational problems in parametric form - Applications.

CORE XV – SEMESTER III

NUMBER THEORY (MTH1615)

Unit-I (14 Hrs)

Residue classes, Linear Congruences with applications, Fermat's theorem, Euler's theorem, Chinese Remainder theorem, Wilson's theorem, the order of an integer modulo n and existence of primitive roots.

Unit-II (14 Hrs)

Quadratic congruences, quadratic residues and nonresidues, Euler's criterion, The Legendre symbol and its properties, quadratic reciprocity, Gauss's Lemma, Jacobian symbol and its properties with applications.

Unit-III (14 Hrs)

Perfect numbers, the group of arithmetic functions, Mobius inversion formula with applications, Fermat numbers and Mersenne numbers.

Unit-IV (14 Hrs)

Finite and infinite simple continued fractions, rational approximations of real numbers, periodic continued fractions and continued fraction factorization.

Unit-V (15 Hrs)

Diophantine linear equations, Pythagorean triples, Gaussian integers, primes as sum of squares the case $n = 4$ in Fermat's Last theorem, Pell's equation continued fraction solution of Pell's equation.

COURSE NUMBER MTH16E7	COURSE NAME OPERATIONS RESEARCH	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- Ability to understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively;
- Knowledge of formulating mathematical models for quantitative analysis of managerial problems in industry
- Provides a quantitative technique or a scientific approach for making better decisions for operations under the control.

Course Outcomes

Upon the successful completion of course, the students will be able to

CO No.	CO Statement	Knowledge level
CO1	Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry	K ₂
CO2	Know how to use variables for formulating complex mathematical models in management science, industrial engineering and Transportation science and in real life.	K ₃
CO3	Analyze a managerial decision problem and formulate into a mathematical model	K ₄
CO4	To design, improve and operate complex systems in the best possible way	K ₅ , K ₆

ELECTIVE VII- SEMESTER IV

OPERATIONS RESEARCH (MTH16E7)

Unit I : (16 hrs)

Advanced Linear Programming –From Extreme points to Basic solutions - Generalized Simplex Tableau in matrix form – Development of the Optimality and Feasibility Conditions - Revised Simplex Algorithm – * Matrix definition of dual problem* – Optimal dual solution.

Unit II : (17 hrs)

Integer Programming – Integer Programming Algorithm –Cutting Plane Algorithm – Deterministic Dynamic Programming – Recursive nature of computations in D.P. – Forward and Backward recursion.

Unit III : (18 hrs)

Simulation Modeling : Monte Carlo Simulation – Types of simulation – Sampling from probability distribution – Generation of random numbers.

Unit IV : (17 hrs)

Classical Optimization Theory – Unconstraint problems – Necessary and Sufficient Conditions – The Newton – Raphson Method – Constrained problems – Equality constraints (Jacobi Method and Lagrangian method).

Unit V : (18 hrs)

Non-Linear Programming – Unconstrained algorithms – Direct Search Method – Gradient Method – Constraint algorithms – Quadratic Programming.

COURSE NUMBER MTH16E8	COURSE NAME DIFFERENTIAL GEOMETRY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- To introduce the notion of surfaces and their properties.
- To study geodesics and differential geometry of surfaces.

Course Outcomes

Upon the successful completion of the course students

CO Number	CO Statement	Knowledge Level
CO1	Make clear and concise arguments involving basic notions and constructions of 2-dimensional Riemannian geometry, curves and torsion.	K2
CO2	Identification of important types of curves in surfaces, including principal curves, asymptotic curves and geodesics.	K3
CO3	Enumerate some standard examples in geometry, such as surfaces of constant Gaussian curvature, compact and non -compact surfaces, and surfaces of revolution.	K4
CO4	Analyze Gaussian and mean curvatures using variety of methods including patch computations, direct calculation of the shape operator	K5
CO5	Articulate connections between geometry and other disciplines, possibly including topology, algebra, analysis, or applied mathematics.	K5

ELECTIVE VIII- SEMESTER IV

DIFFERENTIAL GEOMETRY (MTH16E8)

UNIT I (17 Hrs)

Space Curves: Definition of a space curve - Arc length - tangent - normal and binormal - curvature and torsion - contact between curves and surfaces- tangent surface- involutes and evolutes- Intrinsic equations - Fundamental Existence Theorem for space curves-Helics.

UNIT II (17 Hrs)

Intrinsic Properties of a Surface: Definition of a surface - curves on a surface - Surface of revolution - Helicoids - Metric- Direction coefficients - families of curves- Isometric correspondence- Intrinsic properties

UNIT III (18 Hrs)

Geodesics: Geodesics - Canonical geodesic equations - Normal property of geodesics- Existence Theorems - Geodesic parallels - Geodesics curvature - Gauss- Bonnet Theorem - Gaussian curvature- surface of constant curvature.

UNIT IV (17 Hrs)

Non Intrinsic Properties of a Surface: The second fundamental form- Principal curvature - Lines of curvature - Developable – Developable associated with space curves and with curves on surface - Minimal surfaces - Ruled surfaces.

UNIT V (17 Hrs)

Differential Geometry of Surfaces: Compact surfaces whose points are umbilics- Hilbert's lemma - Compact surface of constant curvature - Complete surface and their characterization - Hilbert's Theorem - Conjugate points on geodesics.

ALC - SEMESTER IV

ADVANCED COMPUTING TECHNIQUES (MTH1622)

Unit I

Crisp sets - union and intersection of crisp sets - Fundamental properties of Crisp operations
- Fuzzy sets - union and intersection of fuzzy sets - Fundamental properties of fuzzy operations.

Unit II

Cryptographic Protocols - Cryptographic Techniques.

Unit III

Cryptographic Algorithms - Mathematical Background - Data encryption Standard - other block ciphers.

Unit IV

Automata and Regular expressions - Finite Automata - Kleene's theorem - derived languages.

Unit V

Finite automata with output - Register machines.

ALC – SEMESTER IV

Introduction to Algorithms (MTH1623)

UNIT I

Mathematical Foundations: Introduction- Growth of Functions- Asymptotic notation- Standard notations and common functions- Summations- Summation formulas and properties- Bounding Summations- Recurrences- The substitution method- The iteration method- The master method- Proof of the master theorem.

UNIT II

Sorting and Order Statistics: Introduction- Heapsort- Heaps- Maintaining the heap property- Building a heap- The heapsort algorithm- Priority queues- Quicksort- Description of quicksort- Performance of quicksort- Randomized versions of quicksort-Analysis of quicksort.

UNIT III

Data Structures: Introduction- Elementary data structures- Stacks and queues- Linked lists- Implementing pointers and objects- Representing rooted trees- Hash Tables- Direct-address tables- hash tables- Hash functions- Open addressing.

UNIT IV

Binary Search Trees: What is a binary search tree?- Querying a binary search tree- Insertion and deletion- Randomly built binary search tree- Red-Black Trees- Properties of red-black trees- Rotations- Insertion- Deletion- Augmenting Data Structures- Dynamic order statistics- How to augment a data structure- Interval trees.

UNIT V

Advanced Data Structures: B- Trees- Definition- Basic operations of B-Trees- Deleting a key from a B-tree- Binomial Heaps- Binomial trees and binomial heaps- Operations on binomial heaps- Fibonacci heaps- Structure of Fibonacci heaps- Mergeable-heap operations- Decreasing a key and deleting a node- Bounding the maximum degree.

Text Book

S. No	Author	Title of the book	Publishers	Year of Publication
1.	Thomas H.Cormen, Charles E.Leiserson Ronald L.Rivest	Introduction to Algorithms	Prentice Hall of India, New Delhi	2001
Unit I : Sections 2.1-2.2, Sections 3.1-3.2, Sections 4.1-4.4 Unit II : Sections 7.1-7.5, Sections 8.1-8.4 Unit III: Sections 11.1-11.4, Sections 12.1-12.4 Unit IV: Sections 13.1-13.4, Sections 14.1-14.4, Sections 15.1-15.3 Unit V : Sections 19.1-19.3, Sections 20.1-20.2, Sections 21.1-21.4				

Reference Book

S. No	Author	Title of the book	Publishers	Year of Publication
1.	Cormen Thoms.H, Leiserson Charles.E, And Rivest Ronald.L	Introduction to Algorithms	Prentice, Hall of India, New Delhi	1990

Pedagogy

Lecture-Chalk & Talk, LCD, Group discussion, Seminar, Quiz

Course Designers

1. Ms.R.Panneerselvi, Assistant Professor
2. Ms.C.R.Parvathy, Assistant Professor
