

PSGR Krishnammal College for Women

UGC Certified College of Excellence + Autonomous + Affiliated to Bharathiar University + ISO 9001:2015 Certified + Reaccredited with 'A' Grade by NAAC + Ranked 22nd in NIRF 2019 by MHRD

DEPARTMENT OF MATHEMATICS (PG)

CHOICE BASED CREDIT SYSTEM & OUTCOME BASED EDUCATION SYLLABUS

MASTER OF MATHEMATICS (M.Sc)

2019 - 2021

PROGRAMME OUTCOME – PG

After completion of the programme, the student will be able to

- PO1** : Students acquire sound analytical and practical knowledge to formulate and solve challenging problems.
- PO2** : Students will be able to read and identify mathematical and computational methods in order to solve comprehensive problems.
- PO3** : Students are well prepared to take jobs in schools and colleges as Mathematic Teachers and Professors, Software Industries, Research and Development Organizations.
- PO4** : Students to pursue higher studies in Mathematical and Computing Sciences and to clear Competitive exams like SET/ NET/ TET etc.
- PO5** : Students to learn and apply Mathematics in real life situations aiming at service to the society.

PROGRAMME SPECIFIC OUTCOME

The students at the time of graduation will

- PSO1** : Provide Strong foundation and inculcate ample knowledge on topics in pure and applied mathematics, empowering the students to pursue higher degrees at reputed academic institutions.
- PSO2** : Advanced mathematical topics provide opportunities to research students for communication and discussion.
- PSO3** : Demonstrate the highest standard of ethics in research.
- PSO4** : Provide scope for interaction with international researchers and developing collaborations.
- PSO5** : Provide knowledge of a wide range of mathematical techniques and application of mathematical methods/tools in other scientific and engineering domains.
- PSO6** : Nurture problem solving skills, thinking, creativity through assignments, project work.

Question Paper Pattern

PG

CIA

Bloom's Category	Section	Marks		Total
K ₁ , K ₂	A – 5x2 marks (No Choice)	10	1 or 2 sentences	50
K ₃ , K ₄	B – 4 x 5 marks (No Choice)	20	250 words	
K ₅ , K ₆	C – 2 out of 3 (2x 10 marks)	20	500 words	

End Semester Examination

Bloom's Category	Section	Marks		Total
K ₁ , K ₂	A – 10x3 marks (No Choice)	30	1 or 2 sentences	100
K ₃ , K ₄	B – 6 out of 7(6 x6 marks)	36	250 words	
K ₄ , K ₅	C – 3 out of 5 (3x 8 marks)	24	400 words	
K ₅ , K ₆	D- 1 x10 (No choice)	10	600 words	

Question paper pattern for ALC- CA

Bloom's Category	Section	Marks		Total
K ₃ , K ₄	A – 4 out of 6(4 x 4 marks)	16	250 words	25
K ₄ , K ₅	B – 1 out of 2(1 x 9 marks)	9	500 words	

Model and End Semester Examination

Bloom's Category	Section	Marks		Total
K ₃ , K ₄	A – 5 out of 8 (1x 5 marks) (Open Choice)	25	250 words	75
K ₄ , K ₅	B – 5 out of 8(5 x 10 marks) (Open Choice)	50	500 words	

Components of Continuous Assessment –

CA test – 10 marks

Model Exam – 15 marks

Total = 25 marks

PROJECT

Internal Assessment: 20 Marks

Review	Mode of Evaluation	Marks	Total
I	Selection of the field of study, Topic & Literature Collection	5	20
II	Research Design and Data Collection	10	
III	Analysis & Conclusion, Preparation of rough draft	5	

External Assessment : 80 Marks

Mode of Evaluation	Marks	Total
Project Report		
Relevance of the topic to academic / society	10	60
Objectives	10	
Experimental Design	20	
Expression of Results and Discussion	20	
Viva Voce		
Presentation	10	20
Discussion	10	

RUBRICS

Assignment/ Seminar

Maximum - 20 Marks (converted to 4 marks)

Criteria	4 Marks	3 Marks	2 Marks	1 Mark
Focus Purpose	Clear	Shows awareness	Shows little awareness	No awareness
Main idea	Clearly presents a main idea.	Main idea supported throughout	Vague sense	No main idea
Organisation: Overall	Well planned	Good overall organization	There is a sense of organization	No sense of organization
Content	Exceptionally well presented	Well presented	Content is sound	Not good
Style: Details and Examples	Large amounts of specific examples and detailed description	Some use of examples and detailed descriptions	Little use of specific examples and details	No use of examples

CLASS PARTICIPATION

Maximum - 20 Marks (converted to 5 marks)

Criteria	5 Marks	4 Marks	3 Marks	2 Marks	1 Mark
Level of Engagement in Class	Student proactively contributes to class by offering ideas and asks questions more than once per class.	Student proactively contributes to class by offering ideas and asks questions once per class	Student contributes to class and asks questions occasionally	Student rarely contributes to class by offering ideas and asking no questions	Student never contributes to class by offering ideas
Listening Skills	Student listens when others talk, both in groups and in class. Student incorporates or builds off of the ideas of others.	Student listens when others talk, both in groups and in class.	Student listens when others talk in groups and in class occasionally	Student does not listen when others talk, both in groups and in class.	Student does not listen when others talk, both in groups and in class. Student often interrupts when others speak.
Behavior	Student almost never displays disruptive behavior during class	Student rarely displays disruptive behavior during class	Student occasionally displays disruptive behavior during class	Student often displays disruptive behavior during class	Student almost always displays disruptive behavior during class
Preparation	Student is almost always prepared for class with required class materials	Student is usually prepared for class with required class materials	Student is occasionally prepared for class with required class materials	Student is rarely prepared for class with required class materials	Student is almost never prepared for class.

COURSE NUMBER MTH1801	COURSE NAME ALGEBRA	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To develop the capability among students for handling abstract concepts and to provide the students with experience in axiomatic mathematics while keeping in close touch with the computational aspects of the subject.
- To prepare students to understand principles, concepts necessary to formulate, solve and analyze Algebra
- To prepare the students for further courses in higher mathematics and related disciplines

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate competence with the basic ideas of algebra including the concepts of direct products, finitely generated abelian groups	K2
CO2	Demonstrate knowledge of the structures of fields, extension fields and finite fields	K3
CO3	Appreciate the significance Sylow's theorem and Galois theory	K4
CO4	Compose clear and accurate proofs using the concepts of Algebra	K5
CO5	Demonstrate competence with the basic ideas of linear Algebra including the concepts of modules and linear transformations	K6

CO5	S	S	S	S	M

S- Strong; M-Medium; L-Low

Syllabus**CORE I - SEMESTER I – ALGEBRA (MTH1801)****Unit I (17 hrs)**

Group Theory: Another Counting principle - Sylow's theorem - Application of Sylow's theorem - Direct products – Finite abelian Group.

Unit II (18 hrs)

Vector spaces and modules: elementary basic concepts – linear independence and bases – dual spaces – inner product spaces – modules

Unit III (17 hrs)

Fields: Extension Fields - Roots of Polynomials - More about root-Elements of Galois Theory - Solvability by radicals -Finite fields

Unit IV (17 hrs)

Linear Transformation: The algebra of linear transformations - Characteristic roots – Matrices - Canonical Forms -Triangular Form - Nilpotent Transformation

Unit V (17 hrs)

Canonical Forms: A Decomposition of V: Jordan form - Rational Canonical Form- Trace and Transpose - Determinants – Hermitian - Unitary and Normal transformations –Real quadratic forms.

COURSE NUMBER MTH1702	COURSE NAME REAL ANALYSIS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To present students the elements and importance of the real analysis.
- To define and recognize the basic properties of the field of real numbers.
- To enable the students to the differentiability of real functions and its related theorems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe fundamental properties of the real numbers that lead to the formal development of real analysis	K2
CO2	Comprehend rigorous arguments developing the theory underpinning real analysis	K3
CO3	Demonstrate an understanding of limits and how they are used in sequences, series, differentiation and integration	K4
CO4	Construct various mathematical proofs of basic results in real analysis	K5
CO5	Appreciate how abstract ideas and various methods in mathematical analysis can be applied to important practical problems. Exhibits rigorous mathematical proofs in real analysis like inverse function theorem and the implicit function theorem	K6

S- Strong; M-Medium; L-Low

Syllabus**CORE II – SEMESTER I - REAL ANALYSIS (MTH1702)**

Unit I (18Hrs)
 Riemann Stieltjes Integral: Definition and Existence of the integral - Properties of the integral - Integration and differentiation - Integration of vector valued function - Rectifiable curves.

Unit II (18 Hrs)
 Uniform convergence and Continuity - Uniform convergence and Integration - Uniform convergence and Differentiation - Equi continuous Families of Functions-The Stone-Weierstrass theorem
Unit III (18Hrs)

Power Series - The Exponential and Logarithmic Functions - The Trigonometric Functions – The Algebraic completeness of the complex field- Fourier series- The Gamma Functions.
Unit IV (16 Hrs)

Functions of Several Variables - Linear Transformation - Differentiation - The Contraction Principle. The inverse function Theorem

Unit V (16Hrs)
 The implicit Function Theorem-The Rank theorem-Determinants-Derivatives of higher order-Differentiation of Integrals

COURSE NUMBER MTH1703	COURSE NAME ORDINARY DIFFERENTIAL EQUATIONS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- Differential equations arise for many problems in oscillations of mechanical and electrical systems
- It plays a very important role in all modern scientific and engineering studies.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1.	Solve a variety of first order differential equations selecting from a variety of techniques	K2
CO2.	Solve a variety of second order differential equations, selecting from several techniques	K2
CO3.	Give series solutions (and approximations) for second order linear differential equations, both at ordinary points and at regular singular points	K3
CO4.	Understand and be able to use various theoretical ideas and results that underlie the mathematics in this course covered in the syllabus (including various existence/uniqueness results, ideas of linear independence and the Wronskian, and convergence properties of Fourier series).	K5
CO5.	Construct and apply symbolic and graphical representations of functions	K6

S- Strong; M-Medium; L-Low

Syllabus**CORE III – SEMESTER I - ORDINARY DIFFERENTIAL EQUATIONS (MTH1703)****Unit I (16 hrs)**

Second order linear equations with ordinary points - Legendre equation and Legendre polynomials - Second order equations with regular singular points - Bessel equation.

Unit II (16 hrs)

Systems of first order equation - Existence and uniqueness theorem - Fundamental matrix.

Unit III (17 hrs)

Non-homogeneous linear systems - Linear systems with constant co-efficient - Linear systems with periodic co-efficients .

Unit IV (18 hrs)

Successive approximation - Picard's theorem - non-uniqueness of solutions - continuation and dependence on initial conditions - Existence of solutions in the large - existence and uniqueness of solutions of systems.

Unit V (19 hrs)

Fundamental results - Sturm's comparison theorem - Elementary linear oscillations- Comparison theorem of Hille-Winter oscillations of $X'' + A(t)X = 0$. Elementary non-linear oscillations.

COURSE NUMBER MTH1704	COURSE NAME MATHEMATICAL STATISTICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	4

Preamble

- To enable the students to learn the different aspects of statistics.
- To provide them a systematic knowledge to analyze, organize, present and interpret any information effectively.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the basic concepts of statistics, probability and random variables	K ₂
CO2	Apply the concepts in finding the moments of the distributions	K ₃
CO3	Identify the type of the distribution	K ₄
CO4	Understand the basics of sampling distribution theory	K ₅
CO5	Emphasis on estimating a good estimate using unbiased, sufficient, efficient estimates	K ₆

S- Strong; M-Medium; L-Low

CORE IV – SEMESTER I - MATHEMATICAL STATISTICS (MTH1704)

Unit I

(16 Hrs)

Limit Theorems: Preliminary remarks-Stochastic convergence-Bernoulli's law of large numbers-The convergence of a sequence of distribution functions - Levy Cramer theorem - De-Moivre Laplace theorem - Lindberg Levy theorem-Lapunov theorem.

Unit II

(17 Hrs)

Markov chains: Preliminary remarks-Homogeneous Markov chains-The transition matrix-The Ergodic theorem- Random variables forming a homogenous Markov chain.

Unit III

(19 Hrs)

Stochastic process: The notion of a stochastic process-Markov process and processes with independent increments-The Poisson process-The Furry-Yule process-Birth and death process- The Polya process-Kolmogorov equations.

Unit IV

(17 Hrs)

Sample moments and their functions - The notion of the sample - The notion of a statistic - The distribution of the arithmetic mean of independent normally distributed random variables - The chi square distribution - The distribution of the statistic (X, S) - Student's t distribution - Significance tests - The concept of a statistical test - Parametric tests for small samples - Parametric tests for large samples - The chi square test- Independence test by contingency tables.

Unit V

(17 Hrs)

Theory of estimation - Preliminary notions – Consistent – unbiased - sufficient and efficient estimates - asymptotically most efficient estimates - methods of finding estimates - Confidence intervals - Theory of hypothesis testing .

COURSE NUMBER MTH18E1	COURSE NAME FINANCIAL MATHEMATICS	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- To derive price-yield relationship and understand convexity
- To understand about the decomposition of matrices in statistics (and probability) point of view, e.g. principle component analysis.
- To understand the applications of financial mathematics.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Apply advanced knowledge in probability, statistics, stochastic calculus and numerical methods for financial applications.	K2
CO2	Demonstrate a broad knowledge of the financial securities as well as practical aspects of risk management.	K3
CO3	Construct quantitative models for derivative pricing, quantitative trading strategies, risk management, and scenario simulations.	K4
CO4	Communicate effectively with potential clients and peers	K5
CO5	Use statistical techniques and methods in data analysis; understand the advantages and limitations of different methods.	K5

Mapping with Programme Outcomes

CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

Syllabus**ELECTIVE I – SEMESTER I - FINANCIAL MATHEMATICS (MTH18E1)****Unit I****(16Hrs)**

Single period models : Some definitions from finance - Pricing a forward -The one-step binary model-A ternary model - A characterisation of no arbitrage - The risk-neutral probability measure.

Unit II**(17 Hrs)**

Binomial trees and discrete parameter martingales : The multiperiod binary model - American options - Discrete parameter martingales and Markov processes - Some important martingale theorems The Binomial Representation Theorem - Overture to continuous models.

Unit III**(17 Hrs)**

Brownian motion :Definition of the process - Levy's construction of Brownian motion - The reflection principle and scaling - Martingales in continuous time.

Unit IV**(17 Hrs)**

Stochastic calculus: Stock prices are not differentiable - Stochastic integration - Ito's formula - Integration by parts and a stochastic Fubini Theorem - The Girsanov Theorem -The Brownian Martingale Representation Theorem - Why geometric Brownian motion- The Feynman–Kac representation.

Unit V**(19 Hrs)**

The Black–Scholes model - The basic Black–Scholes model -Black–Scholes price and hedge for European options - Foreign exchange -Dividends -Bonds - Market price of risk.

COURSE NUMBER MTH17E2	COURSE NAME GRAPH THEORY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- To present students the Basic concepts of graph theory.
- To enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Understanding of some network and colouring in Graph theory .	K2
CO2	Apply the understanding and used to model the atomic variable .	K3
CO3	Apply the concepts of connectivity, Blocks and Hamilton cycles in the real life.	K4
CO4	Demonstrate the concept and familiar with the concepts of colouring develop the reader to apply in day today life .	K5
CO5	Emphasis on some of the concepts in graph theory and the readers to apply in day today life.	K5

ELECTIVE II - SEMESTER I - GRAPH THEORY (MTH17E2)

Unit I (16 hrs)

Graphs, Subgraphs : Graphs and Simple Graphs – Graph Isomorphism – The Incidence and Adjacency Matrices – Subgraphs – Vertex Degrees – Paths and Connection Cycles. Trees: Trees- Cut Edges and Bonds – Cut Vertices – Cayley’s Formula.

Unit II (16 hrs)

Connectivity, Euler Tours And Hamilton Cycles: Connectivity – Blocks- Euler tours – Hamilton cycles.

Unit III (18 hrs)

Matchings : Matchings – Matchings Coverings in Bipartite Graphs – Perfect Matching

Edge Colourings: Edge Chromatic Number – Vizing’s Theorem.

Unit IV (18 hrs)

Independent Sets, Cliques and Vertex Colourings: Independent Sets- Ramsey’s Theorem

Chromatic Number – Brook’s Theorem – Hajos Conjecture – Chromatic Polynomials – Girth and Chromatic Number.

Unit V (18 hrs)

Planar Graphs: Plane and Planar Graphs – Dual Graphs – Euler’s Formula- Bridges – Kuratowski’s Theorem (Proof Omitted) – The Five Colour Theorem and The Four Colour Conjecture – Nonhamiltonian Planar Graphs – Directed Graphs: Directed Graphs – Directed Paths – Directed Cycles.

COURSE NUMBER MTH1805	COURSE NAME NUMBER THEORY	CATEGORY	L	T	P	CREDI
		CORE	71	4	-	T 4

Preamble

- To expose the students to the charm, niceties and nuances in the world of numbers.
- To present a rigorous development of Number Theory using axioms, definitions, examples, theorems and their proofs.
- To highlight some of the applications of the theory of Numbers.

Course Outcomes

Upon the successful completion of the course students will able to

CO Number	CO Statement	Knowledge Level
CO1.	Demonstrate factual knowledge including the mathematical notation and terminology of number theory	K2
CO2.	Construct mathematical proofs of statements and find counterexamples to false statements in Number Theory.	K3
CO3.	Apply theoretical knowledge to problems of computer security	K4
CO4.	Analyze the logic and methods behind the major proofs in number theory.	K5
CO5.	Explore some current research problems in number theory	K5

Syllabus**CORE V – SEMESTER II - NUMBER THEORY (MTH1805)****Unit-I (13 Hrs)**

Residue classes, Linear Congruences with applications, Fermat's theorem, Euler's theorem, Chinese Remainder theorem, Wilson's theorem, the order of an integer modulo n and existence of primitive roots.

Unit-II (14 Hrs)

Quadratic congruences, quadratic residues and nonresidues, Euler's criterion, The Legendre symbol and its properties, quadratic reciprocity, Gauss's Lemma, Jacobian symbol and its properties with applications.

Unit-III (16 Hrs)

Perfect numbers, the group of arithmetic functions, Mobius inversion formula with applications, Fermat numbers and Mersenne numbers.

Finite and infinite simple continued fractions, rational approximations of real numbers

Unit-IV (14 Hrs)

Diophantine linear equations, Pythagorean triples, Gaussian integers, primes as sum of squares the case $n = 4$ in Fermat's Last theorem, Pell's equation continued fraction solution of Pell's equation.

Unit-V (14 Hrs)

Analytic Number Theory- Sum of reciprocals of primes-order of growth of function- Chebyshev's theorem- Bertrand's postulate- the prime number theorem- the Zeta function and Riemann hypothesis

COURSE NUMBER MTH1706	COURSE NAME LEBESGUE MEASURE THEORY	CATEGORY	L	T	P	CREDIT
		CORE	71	4	-	4

Preamble

- To introduce the concepts of measure and integral with respect to a measure, to show their basic properties, and to provide a basis for further studies in Analysis, Probability, and Dynamical Systems.
- To gain understanding of the abstract measure theory and definition and main properties of the integral.
- To construct Lebesgue's measure on the real line and in n -dimensional Euclidean space. To explain the basic advanced directions of the theory.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describes the basics axioms for the real numbers, natural and rational numbers as subset. Demonstrate the basic concepts underlying the definition of the general Lebesgue integral.	K2
CO2	Derives the concepts of Borel sets, measurable functions, differentiation of monotone functions	K3
CO3	Analyse about the little wood's theorem, integral of a non-negative function, functions of bounded variation	K4
CO4	Construct a clear idea about convergence in measure, differentiation of an integral, absolute continuity and convex functions	K5
CO5	Apply the theory of the course to solve a variety of problems at an appropriate level of difficulty	K6

Mapping with Programme Outcomes

S- Strong; M-Medium; L-Low

Syllabus**CORE VI – SEMESTER II - LEBESGUE MEASURE THEORY (MTH1706)****Unit I****(14Hrs)**

The Real number system: Axioms for the real numbers- The natural and rational numbers as subset of \mathbb{R} -The extended real numbers-Sequence of real numbers-open and closed sets of real numbers-continuous functions-Borel sets.

Unit II**(14Hrs)**

Lebesgue Measure: Outer measure - Measurable sets and Lebesgue measure - Measurable functions - The Little wood's theorem.

Unit III**(15Hrs)**

The Lebesgue Integral: The Lebesgue integral of a bounded function over a set of finite measure - Integral of a non-negative function - General Lebesgue integral - Convergence in measure.

Unit IV**(14 Hrs)**

Differentiation and Integration: Differentiation of monotone functions-Functions of bounded variation-Differentiation of an integral - Absolute continuity-Convex functions

Unit V**(14 Hrs)**

The classical banach spaces: the L^p spaces- The Minkowski and holder inequalities-Convergence and completeness-Approximation in L^p .

COURSE NUMBER MTH1707	COURSE NAME PARTIAL DIFFERENTIAL EQUATIONS	CATEGORY	L	T	P	CREDIT
		CORE	71	4	-	4

Preamble

- To present students the elements of the theory of partial differential equation.
- To introduce different methods for solving partial differential equation.
- To enable the students to find solution of partial differential equation of practical application like engineering, physics etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

Mapping with Course Outcomes

CO Number	CO Statement	Knowledge Level
CO1	Enumerate the basic concepts of first and second order partial differential equation of and different methods of solving pde's	K2
CO2	Classify PDEs, apply analytical methods, and physically interpret the solutions.	K3
CO3	Formulate, analyse and validate mathematical models of practical problems related to other fields.	K4
CO4	Investigate boundary values problems and point out its significance	K5
CO5	Use knowledge of partial differential equations for modelling the general structure of solutions and using analytic methods for solutions.	K6

Syllabus**CORE VII – SEMESTER II - PARTIAL DIFFERENTIAL EQUATIONS (MTH1707)****Unit I****(15 Hrs)**

Nonlinear Partial Differential Equations of the first order - Cauchy's method of Characteristics - Compatible System of First order equations- Charpit's method - Special types of First Order equations - Jacobi's method.

Unit II**(14 Hrs)**

Partial Differential Equations of second order - The origin of Second-order Equations - Linear Partial Differential Equations with constant coefficients – Equations with variable coefficients

Unit III**(14 Hrs)**

The solution of Linear Hyperbolic Equations - Separation of variables – The Method of integral transforms - Non linear Equation of the second order.

UNIT IV**(14 Hrs)**

Laplace's equation - The occurrence of Laplace's Equation in Physics - Elementary solution of Laplace's Equation - Families of Equipotential surfaces - Boundary value problems - Separation of variables - Problems with axial symmetry.

Unit V**(14 Hrs)**

The wave Equation -The occurrence of wave equation in physics – Elementary solution of the one-dimensional wave equation - Vibrating Membranes: Application of the calculus of variations -Three dimensional problems. The diffusion equations: Elementary solutions of the diffusion Equation - Separation of variables - the use of Integral transforms.

COURSE NUMBER MTH1808	COURSE NAME MECHANICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	5

Preamble

- To develop familiarity with the physical concepts and facility with the mathematical methods of classical mechanics.
- To represent the equations of motion for complicated mechanical systems using the Lagrangian and Hamiltonian formulation of classical mechanics.
- To develop skills in formulating and solving physics problems

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the knowledge of core principles in mechanics	K2
CO2	Interpret complex and difficult problems of classical dynamics in a systematic way	K3
CO3	Apply the variation principle for real physical situations	K4
CO4	Identify the existing symmetries and the corresponding integrals of motion and analyze the qualitative nature of dynamics	K5
CO5	Explore problem solving skills (approach, estimation, computation, and analysis) of classical mechanics in various contexts such as mechanical engineering, astrophysics, and biophysics.	K6

CORE VIII – SEMESTER II - MECHANICS (MTH1808)

UNIT I

(18 hrs)

Introductory concepts: Mechanical system - generalized coordinates – constraints - virtual work - energy and momentum.

UNIT II

(17 hrs)

Lagrange's equations: Derivations of Lagrange's equations – examples - integrals of motion.

UNIT III

(17 hrs)

Hamilton's equations: Hamilton's principles - Hamilton's equations - other variational principles.

UNIT IV

(17 hrs)

Hamilton – Jacobi theory: Hamilton's principle function - Hamilton - Jacobi equation - Separability.

UNIT V

(17 hrs)

Canonical transformations: Differential forms and generating functions - Lagrange and Poisson brackets.

COURSE NUMBER MTH18E3	COURSE NAME CONTROL THEORY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	3

Preamble

- The objective of this course is to introduce some fundamental concepts of control system including state space techniques, optimal control, stability analysis and controllability.
- The course is intended to provide students with confidence in own abilities to analyze and design a new control system.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe the basic concepts and properties of differential equations, fundamental concepts of control system	K2
CO2	Understand about concept of observable and controllable system.	K3
CO3	Ability to analyze and design a new control system.	K4
CO4	Analyze the system stability, equilibrium points, linear system stability	K5
CO5	Apply optimal control to statement of the optimal control problems and interpret the problems	K6

Syllabus

ELECTIVE III – SEMESTER II - CONTROL THEORY (MTH18E3)

Unit I (12 Hrs)

Observability: Linear systems - Observability Grammian - Constant coefficient systems - Reconstruction Kernel - Nonlinear Systems.

Unit II (11 Hrs)

Controllability: Linear Systems - Controllability Grammian - Adjoint Systems - Constant coefficient systems - Steering function - Nonlinear systems.

Unit III (11 Hrs)

Stability: Stability - Uniform Stability - Asymptotic Stability of Linear Systems - Linear time varying systems - Perturbed linear systems- Nonlinear systems.

Unit IV (11 Hrs)

Stabilizability: Stabilization via linear feedback control - Bass method - Controllable subspace - Stabilization with restricted feedback.

Unit V (11 Hrs)

Optimal Control: Linear time varying systems with quadratic performance criteria - Matrix Riccati equation - Linear time invariant systems - Nonlinear Systems.

COURSE NUMBER MTH18E4	COURSE NAME STOCHASTIC PROCESSES	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	3

Preamble

- To enable the students to learn the different aspects of statistics.
- To provide them a systematic knowledge to analyze, organize, present and interpret any information effectively.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the basic concepts of Stochastic process, Markov chains,	K ₂
CO2	Apply the concepts in	K ₃
CO3	Identify the type of the distribution	K ₄
CO4	Understand the basics of sampling distribution theory	K ₅
CO5	Emphasis on estimating a good estimate using unbiased, sufficient, efficient estimates	K ₆

ELECTIVE IV – SEMESTER II - STOCHASTIC PROCESSES (MTH18E4)

UNIT I

(12 Hrs)

Elements of Stochastic Process: Review of basic terminology and Properties of random variables and distribution functions – Two simple examples of Stochastic Process - Classification of general Stochastic Process – Defining a Stochastic Process. **Markov Chains** : Definitions - Examples of Markov Chains – Transition probability matrices of a Markov Chains – Classification of states of Markov Chains – Recurrence – Examples of recurrent Markov Chains

UNIT II

(11 Hrs)

The Basic limit theorem of Markov Chains and Applications: Discrete renewal equations – Proof of Theorem 1.1 – Absorption Probabilities – Criteria for recurrence – A Queueing example – Another Queueing model – Random walk. **Classical examples of Continuous time Markov Chains** : General pure Birth processes and Poisson processes - A counter model – Birth and Death processes – Differential equations of Birth and Death processes – Birth and Death processes with absorbing states – Finite state continuous time Markov Chains

UNIT III

(11 Hrs)

Renewal Processes: Definition of a Renewal process and related concepts – Some special renewal process and examples – Renewal equations and Elementary Renewal Theorem – Renewal theorem – Applications of The Renewal theorem – Generalizations and variations on Renewal processes. **Brownian Motions** : Background material – Joint probabilities for Brownian Motions – Continuity of paths and the Maximum Variables – Variations and Extensions – Computing some functional of Brownian Motions by Martingale methods – Multi Dimensional Brownian Motions - Brownian paths

UNIT IV

(11 Hrs)

Branching Processes : Discrete Time Branching Processes – Generating function relations for Branching Processes – Extinction probabilities – Examples – Two type Branching Processes – Multi type Branching Processes – Continuous time Branching Processes – Extinction probabilities for Continuous time Branching Processes – Limit Theorems for Continuous time Branching Processes

UNIT V

(11 Hrs)

Stationary Processes: Definitions and Examples – Mean square distance – Mean square error prediction – Prediction of Covariance Stationary Processes – Ergodic Theory and Stationary Processes – Applications of Ergodic Theory

COURSE NUMBER MTH1909	COURSE NAME COMPLEX ANALYSIS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	5

Preamble

- To present students the elements and importance of the Complex analysis.
- To define and recognize the basic properties of the complex numbers.
- To enable the students to the differentiability of complex functions and its related theorems.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe fundamental properties of the complex numbers that lead to the development of complex analysis	K2
CO2	Evaluate line integrals, curve integrals, singularities and determine the values of integrals using residues.	K3
CO3	Apply and understand about limits and to know how they are used in series and problems	K4
CO4	Analyze functions of complex variable in terms of continuity, differentiability and analyticity. Apply Cauchy-Riemann equations and harmonic functions to solve problems	K5
CO5	Comprehend rigorous arguments developing the theory underpinning complex analysis	K5

CORE IX - SEMESTER III - COMPLEX ANALYSIS (MTH1909)**Unit I****(16 Hrs)**

Introduction to the concept of analytic function: Limits and continuity - Analytic functions- Polynomials - Rational functions - Conformality: Arcs and closed Curves - Analytic functions in regions - Conformal Mapping - Length and Area - Linear Transformations: The Linear group - The Cross-ratio - Elementary Riemann Surfaces.

Unit II**(17 Hrs)**

Complex integration: Line integrals Rectifiable Arcs - Line Integrals as Functions of Arcs- Cauchy's theorem for a rectangle - Cauchy's theorem in a disk - Cauchy's integral formula: The index of a point with respect to a closed curve - The integer formula - Higher derivatives - Removable singularities - Taylor's Theorem - Zeros and Poles - The local mapping - The Maximum Principle - chains and cycles.

Unit III**(17 Hrs)**

The Calculus of Residues: The Residue theorem - The Argument principle - Evaluation of definite integrals - Harmonic functions: The Definitions and basic Properties - Mean value property - Poisson's Formula.

Unit IV**(17 Hrs)**

Series and Product Developments: Weierstrass theorem - The Taylor Series - The Laurent Series - Partial fractions and Factorization: Partial Fractions - Infinite Products - Canonical Products.

Unit V**(19 Hrs)**

The Riemann Mapping Theorem - Statement and Proof- Boundary Behavior - Use of the reflection principle - Analytic arcs - Conformal mapping of Polygons: The Behavior at an angle - the Schwartz - Christoffel Formula - Mapping on a rectangle.

COURSE NUMBER MTH1910	COURSE NAME TOPOLOGY	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	5

Preamble

- Students will learn the fundamental concepts of point-set topology.
- Introduce students to the concepts of open and closed sets abstractly, not necessarily only on the real line approach.
- Provide the awareness of tools to students to carrying out advanced research work in pure mathematics

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Define and illustrate the concept of topological spaces and continuous functions, concept of product topology and quotient topology	K2
CO2	Identify the concepts of distance between two sets, connectedness, denseness, compactness and separation axioms.	K3
CO3	Analyze the concepts to read and write theorem proofs in topology	K4
CO4	Ability to determine that a given point in a topological space is either a limit point of not for a given subset of a topological space.	K5
CO5	Apply theorem proofs to do variety of examples and counter examples in topology	K5

CORE X – SEMESTER III - TOPOLOGY (MTH1910)

Unit I (18 Hrs)

Topological Spaces - Basis for a Topology - The Order Topology - Closed Sets and Limit Points - Continuous Functions - Product Topology - Metric Topology.

Unit II (17 Hrs)

Connectedness and Compactness: Connected Spaces - Connected sets in \mathbb{R} - Components and Path Components - Local Connectedness - Compact Spaces - Limit Point Compactness - Local Compactness.

Unit III (15 Hrs)

Countability and Separation Axioms: Countability Axioms - Separation Axioms - Urysohn's Lemma – Urysohn Metrization Theorem.

Unit IV (17 Hrs)

The Tychonoff Theorem - Completely Regular spaces - The Stone-Cech Compactification.

Unit V (19 Hrs)

Complete Metric Spaces - Compactness in Metric Spaces - Point-wise and Compact Convergences - Ascoli's Theorem - Baire spaces.

COURSE NUMBER MTH1911	COURSE NAME BASICS OF CRYPTOGRAPHY	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	5

Preamble

- Gain cyber security skills required for senior level careers by focusing on principles and best management techniques.
- Provides a deeper understanding into cryptography, its application to network security, threats/vulnerabilities to networks and countermeasures.
- To work for financial institutions and consultancies, and as security specialists within a wide range of companies and R&D organizations.

Course Outcomes

Upon the successful completion of course, the students will be able to

CO No.	CO Statement	Knowledge level
CO1	Understand the basic concept of Cryptography and Network Security, their mathematical models.	K ₂
CO2	Understand mathematical foundation required for various cryptographic Algorithms. Identify and classify computer and security threats	K ₃
CO3	Describe and analyze existing authentication protocols for two party communications.	K ₄
CO4	Examine the issues and structure of Authentication Service and Electronic Mail Security, web security and IP security.	K ₅
CO5	Develop a security model to prevent, detect and recover from attacks.	K ₆

CORE XI – SEMESTER III - BASICS OF CRYPTOGRAPHY (MTH1911)

Unit I

(19 hrs)

Introduction to Information Security: Introduction, security, critical characteristics of information, NSTISSC security model, components of an information system, security components, Approaches to information security implementation. The system development life cycle, The Security System Development life cycle. **The need for security:** Business needs first, threats, attacks, secured software development.

Cryptography : Basic concepts of cryptography, Cryptograph tools. Authentication, Passwords, keys versus passwords, Attacking Systems via passwords, Password verification.

Unit II

(19 hrs)

Classical Encryption Techniques; Symmetric cipher model, substitution techniques, Transposition Techniques. Block Ciphers and the Data Encryption Standard: Block cipher principles, the data encryption standard, the strength of DES.

Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorem, Testing for primality, Miller-Rabin Algorithm. Chinese Remainder Theorem, Discrete Logarithms, Algorithms. (Except Problems)

Unit III

(18 hrs)

Public Key Cryptosystems : Principles of public, key cryptography, public, key cryptosystems, Applications for public ,key cryptosystems, Requirements for public , key cryptography, public, key cryptanalysis, RSA Algorithm, Description of the Algorithm, Computational Aspects, Security of RSA.

Key Management: Diffie – Hellman Key Exchange – Algorithm, Key exchange protocols, Elliptic Curve Arithmetic, Elliptic Curve cryptography. (Except Problems)

Unit IV

(15 hrs)

Digital Signatures and Authentication Protocols : Requirements, Direct Digital Signature, Arbitrated Digital Signature, Authentication Protocols, Mutual Authentication, One Way Authentication, Digital Signature Standard, DSS Approach and Digital Signature Algorithm (Except Problem)

Unit V

(15 hrs)

Virus: Viruses and Related threats, Virus Countermeasure

Fire Walls: Firewalls, Types of Firewall, Design Principles of Firewall, Trusted Systems.

COURSE NUMBER MTH1912	COURSE NAME FLUID DYNAMICS	CATEGORY	L	T	P	CREDIT
		CORE	86	4	-	5

Preamble

- To familiarize the students with basic concepts of Fluid Dynamics as the subject has got application in medical, astrophysical, geophysical, agricultural, aero dynamical and other related disciplines.
- To develop the problem-solving skills essential to fluid dynamics in practical applications.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Understand the fundamental knowledge of fluids and its properties	K2
CO2	Describe the concepts and equations of fluid dynamics	K3
CO3	Apply thermodynamic control volume concepts in fluid dynamics for applications that include momentum, mass and energy balances	K4
CO4	Analyze the approximate solutions of the Navier-Stokes equation	K5
CO5	Appreciate the role of fluid dynamics in day-to-day life	K6

Syllabus**CORE XII – SEMESTER III - FLUID DYNAMICS (MTH1912)****Unit-I****(16 hrs)**

Introductory Notions - Velocity - Streamlines and path lines - Stream tubes and filaments - Fluid body - Density - Pressure - Differentiation following the fluid - Equation of continuity - Boundary condition - Kinematical and physical - Rate of change of linear momentum - Equation of motion of an inviscid fluid.

Unit-II**(18 hrs)**

Euler's momentum theorem - conservative forces - Bernoulli's theorem in steady motion - Energy equation for inviscid fluid - Circulation - Kelvin's theorem - Vortex motion - Helmholtz equation.

Unit-III**(18 hrs)**

Two dimensional motion - Two dimensional functions - Complex potential - basic singularities - Source and sink vortex - Doublet - circle theorem - flow past a circular cylinder with circulation - Conformal transformation - Blasius theorem - Lift force .

Unit-IV**(17 hrs)**

Viscous flows - Navier-stokes equations - Vorticity and circulation in a viscous fluid - Steady flow through an arbitrary cylinder under pressure - Steady Couette flow between cylinders in relative motion - Steady flow between parallel planes.

Unit-V**(17 hrs)**

Laminar boundary layer in incompressible flow - Boundary layer concept - boundary layer equations - displacement thickness - momentum thickness - kinetic energy thickness - integral equation of boundary layer - flow parallel to semi infinite flat plate - Blasius equation and its solution in series.

SEMESTER III – SPECIAL PAPER

RESEARCH METHODOLOGY (MTH19S1)

Credits : 2

Total duration : 30 Hrs

Objective

To motivate the students in Research Oriented Topics.

Unit I

(6 Hrs)

Research Methodology: An Introduction Meaning, Objectives, and Types of research, Research Process, Criteria of Good Research

Interpretation and Report Writing

Meaning of Interpretation, why Interpretation? Technique of Interpretation, Precaution of Interpretation, Significance of Report Writing, different steps in Writing report, Layout of the research Report, Types of Reports, Oral Presentation, Mechanics of writing a Research report, Precautions of Writing Research Reports

Unit II

(6 Hrs)

Text, Symbols, and Commands: Command names and arguments -Environments -Declarations - Lengths -Special characters -Fine-tuning text - Word division

Document Layout and Organization: Document class - Page style - Parts of the document - Table of contents

Unit III

(6 Hrs)

Displayed Text: Changing font - Centering and indenting - Lists - Generalized lists - - Theorem-like declarations - Tabulator stops - Boxes - Tables - Printing literal text - Footnotes and marginal notes - Comments within text.

Mathematical Formulas: Mathematical environments - Main elements of math mode - Mathematical symbols Additional elements - Fine-tuning mathematics

Unit IV

(6 Hrs)

PostScript and PDF : LATEX and PostScript - Portable Document Format

Math Extensions with AMS-LATEX: Invoking AMS-LATEX - Standard features of AMS-LATEX - Further AMS-LATEX packages - The AMS fonts

Unit V**(6 Hrs)**

Research Ethics and Responsible Conduct in Research: Brief history and analytical basis of research ethics, responsible conduct in research (Honesty in Science: Integrity, Authorship, Conflicts of Interest, Privacy and Confidentiality, Informed Consent, Risk/Benefit Assessment), The legal regulation of research ethics in India (From UGC, MHRD and other governing agencies), Regulatory requirements relevant to international research.

COURSE NUMBER MTH19E5	COURSE NAME MATHEMATICAL MODELLING	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	3

Preamble

- To enable the students to learn mathematical concepts
- To build mathematical models of real-world systems, analyze them and make predictions about behavior of these systems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO No	CO Statement	Knowledge Level
CO1	Understand the importance of Mathematical modeling in the real world	K2
CO2	Assess and articulate what type of modeling techniques are appropriate for a given physical system	K3
CO3	Construct a mathematical model of a given physical system and analyze it, make predictions	K4
CO4	Compose the findings from the methods applied for the problem	K5
CO5	Formulate, analyze and simulate mathematical models	K6

ELECTIVE V – SEMESTER III - MATHEMATICAL MODELLING (MTH19E5)**Unit-I****(11 hrs)**

Mathematical Modeling through Systems of Ordinary differential Equations of the First Order : Mathematical modeling in population dynamics, *Mathematical modeling in Arms Race, Battles and international Trade interms of systems of ordinary differential equations*- Mathematical modeling in dynamics through systems of ordinary differential equations of first order.

Unit-II**(11 hrs)**

Mathematical Modeling through difference equations: The need for Mathematical modeling through difference equations - Some simple models - Basic theory of linear difference equations with constant coefficients - Mathematical modeling through difference equations in economics and finance.

Unit-III**(11 hrs)**

Mathematical Modeling through difference equations (contd.): Mathematical modeling through difference equation in population dynamics and genetics - Mathematical modeling through difference equations in probability theory - Miscellaneous examples of mathematical modeling through difference equations.

Unit-IV**(12 hrs)**

Mathematical modeling through Graphs: Situations that can be modeled through graphs – Mathematical models in terms of directed graphs - mathematical models in terms of signed graphs - Mathematical models in terms of weighted graphs.

Unit-V**(11 hrs)**

Mathematical Modeling through calculus of Variations and Dynamic Programming : Optimization principles and techniques - Mathematical modeling through calculus of variations – Mathematical Modeling through dynamic programming.

COURSE NUMBER MTH19E6	COURSE NAME TENSOR ANALYSIS	CATEGORY	L	T	P	CREDIT
		ELECTIVE	56	4	-	3

Preamble

- To introduce students to the fundamentals of tensor algebra.
- To expose students to mathematical applications of tensor algebra which helps them to solve diverse problems which occur in real life situations

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Understand concept of tensor variables and difference from scalar or vector variables.	K2
CO2	Derive base vectors, metric tensors and strain tensors in an arbitrary coordinate system.	K3
CO3	Investigate the Christoffel symbols which provide a concrete representation of the connection of (pseudo-)Riemannian geometry in terms of coordinates on the manifold.	K4
CO4	Apply Riemannian-Christoffel tensor to problems of differential geometry, electrodynamics and relativity.	K5
CO5	Interpret tensor representation from interdisciplinary areas.	K6

SEMESTER IV – ELECTIVE VI**TENSOR ANALYSIS (MTH19E6)****Unit I (12 Hrs)**

Tensor theory: Scope of Tensor Analysis – transformation of coordinates - properties of admissible transformations of coordinates- transformation by invariance- transformation by covariance and contravariance – contravariant tensor –covariant tensor- tensor character of covariant and contravariant laws – algebra of tensors.

Unit II (11 Hrs)

Quotient law – symmetric and skew-symmetric tensors – relative tensors – the metric tensor- the fundamental and associated tensors.

Unit III (11 Hrs)

Christoffel's symbols – transformation of Christoffel's symbols – covariant differentiation of tensors – Ricci's theorem.

Unit IV (11 Hrs)

Riemann – Christoffel tensor – properties of Riemann-Christoffel tensors –Ricci tensor –Bianchi identities –Einstein tensor.

Unit V (11 Hrs)

Riemannian and Euclidean spaces – existence theorem – the e-systems and the generalized Kronecker deltas – application of the e-systems to determinants – tensor character of generalized Kronecker deltas.

COURSE NUMBER MTH1913	COURSE NAME FUNCTIONAL ANALYSIS	CATEGORY	L	T	P	CREDITS
		CORE	86	4	-	5

Preamble

- Students will learn the basic concepts and theorems of functional analysis and its applications.
- The student is able to apply knowledge of functional analysis to solve mathematical problems.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Describe properties of normed linear spaces and construct examples of such spaces	K2
CO2	Apply basic theoretical techniques to analyze linear functionals and operators on Banach and Hilbert spaces.	K3
CO3	Apply orthonormality to Fourier series expansions of functions	K4
CO4	Apply theorems to do problems	K5

CORE PAPER XIII - SEMESTER IV - FUNCTIONAL ANALYSIS (MTH1913)

Unit I (18 Hrs)

Banach spaces - The definition and some example - Continuous linear transformations - The Hahn -Banach theorem - The natural imbedding of N in N^{**} - The open mapping theorem - The Closed graph theorem.

Unit II (17 Hrs)

The conjugate of an operator - Hilbert spaces - Definition and some simple properties - Orthogonal complements - Orthonormal sets.

Unit III (17 Hrs)

The Conjugate space H^* - The adjoint of an operator - Self adjoint operators - Normal and unitary operators - Projections.

Unit IV (16 Hrs)

Matrices - Determinants and the spectrum of an operator - The spectral theorem.

Unit V (18 Hrs)

The definition and some examples of Banach algebras - Regular and singular elements - Topological divisors of zero - The spectrum - The formula for the spectral radius.

		CORE	86	4	-	5

Preamble

- To give an introduction to mathematical methods for solving hard mathematics problems that arises in the sciences.
- To give an experience in the implementation of Mathematical concepts like integral transforms, integral equations and calculus of variations in various field of Engineering.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Acquire knowledge of various mathematical concepts and techniques required for successful application of mathematics in physics and related sciences	K2
CO2	Apply various transforms and integral equations to solve multidisciplinary application problems	K3
CO3	Recognize and solve particular cases of Fredholm and Volterra integral equations and variational problem by constructing an appropriate functional, and solving the Euler-Lagrange equations.	K4
CO4	Demonstrate the ability to present their results	K5
CO5	Develop strategies using mathematical methods to solve real world problems	K6

CORE PAPER XIV - SEMESTER IV - MATHEMATICAL METHODS (MTH1914)

Unit-I (17 hrs)

Fourier transforms: Fourier sine and cosine transforms - Fourier transform of derivatives - Fourier transform of simple functions - Convolution integral - Parseval's Theorem - Solution of PDE by Fourier transforms - Laplace equation in half plane - Laplace equation in an infinite strip-Laplace equation in semi infinite stripe - The Linear diffusion equation on a semi infinite line - The two dimensional diffusion equation.

Unit-II (17 hrs)

Hankel Transforms: Properties of Hankel transforms - Hankel inversion theorem of derivatives of functions (proof is omitted) - The Parseval's relation - Relation between Fourier and Hankel transforms - Axisymmetric Dirichlet problem for a half space - Axisymmetric Dirichlet problem for a thick plate.

Unit-III (15 hrs)

Integral equations: Type of integral equations - Integral Fredholm alternative - approximate Method - Equation with separable Kernel - Volterra integral equations - Fredholm's theory - Fredholm's First - second and third theorems.

Unit-IV (18 hrs)

Application of integral equation to ordinary differential equation - Initial value problems - Boundary value problems - Singular integral equations - Abel integral equation.

Unit-V (19 hrs)

Calculus of Variations: Variation and its properties - Euler's equation - Functionals of the integral form - Functional dependent on higher order derivatives - Functionals dependent on the Functions of several independent variable - Variational problems in parametric form - Applications.

COURSE NUMBER MTH1915	COURSE NAME MATHEMATICAL PROGRAMMING	CATEGORY	L	T	P	CREDIT
		ELECTIVE	86	4	-	4

Preamble

- Ability to understand and analyze managerial problems in industry so that they are able to use resources (capitals, materials, staffing, and machines) more effectively;
- Knowledge of formulating mathematical models for quantitative analysis of managerial problems in industry
- Provides a quantitative technique or a scientific approach for making better decisions for operations under the control.

Course Outcomes

Upon the successful completion of course, the students will be able to

CO No.	CO Statement	Knowledge level
CO1	Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry	K ₂
CO2	Know how to use variables for formulating complex mathematical models in management science, industrial engineering and Transportation science and in real life.	K ₃
CO3	Analyze a managerial decision problem and formulate into a mathematical model	K ₄
CO4	To design, improve and operate complex systems in the best possible way	K ₅ , K ₆

ELECTIVE VII- SEMESTER IV

MATHEMATICAL PROGRAMMING (MTH1915)

Unit I : (16 hrs)

Advanced Linear Programming –From Extreme points to Basic solutions - Generalized Simplex Tableau in matrix form – Development of the Optimality and Feasibility Conditions - Revised Simplex Algorithm – Matrix definition of dual problem– Optimal dual solution.

Unit II : (17 hrs)

Integer Programming – Integer Programming Algorithm –Cutting Plane Algorithm – Deterministic Dynamic Programming – Recursive nature of computations in D.P. – Forward and Backward recursion.

Unit III : (18 hrs)

Simulation Modeling : Monte Carlo Simulation – Types of simulation – Sampling from probability distribution – Generation of random numbers.

Unit IV : (17 hrs)

Classical Optimization Theory – Unconstraint problems – Necessary and Sufficient Conditions – The Newton – Raphson Method – Constrained problems – Equality constraints (Jacobi Method and Lagrangian method).

Unit V : (18 hrs)

Non-Linear Programming – Unconstrained algorithms – Direct Search Method – Gradient Method – Constraint algorithms – Quadratic Programming.

PROJECT & VIVA VOCE

Credits: 5

Hours Per Week: 7 Hrs

Maximum Marks: 100

Internal Evaluation

I Review – Selection of the field of study, Topic & research design	- 5 Marks
II Review – Literature Collection & Data Collection	- 5 Marks
III Review – Analysis & Conclusion Preparation of rough draft	- 10 Marks
Total	- 20 Marks

End Semester Examination

Evaluation of the project	- 60 Marks
Viva Voce	- 20 Marks
Total	- 80 Marks

TOTAL - 100 Marks

COURSE NUMBER MTH19E7	COURSE NAME - FORMAL LANGUAGES AND AUTOMATA THEORY	Category	L	T	P	Credit
		Elective	71	4	-	3

Preamble

- Introduce the fundamental concepts of formal languages, grammars and automata theory.
- Identify different formal language classes and their relationships

Prerequisite

- Knowledge in basic concepts of calculus and matrices

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	understand basic concepts in Lattices , formal language and automata theory	K2
CO2	demonstrate abstract models of computing, including deterministic (DFA), non-deterministic (NFA), Push Down Automata(PDA)	K3
CO3	relate practical problems to languages and automata	K4
CO4	Design grammars and recognizers for different formal languages	K5
CO5	formalize the structure of a given formal language using regular expressions and context - free grammars	K5

ELECTIVE VII - SEMESTER IV
FORMAL LANGUAGES AND AUTOMATA THEORY (MTH19E7)

UNIT I **(15 hrs)**

Lattices and Boolean Algebra: Lattices as Partially ordered sets - Boolean Algebra- Boolean Functions– Representation and Minimization of Boolean Functions.

UNIT II **(10 hrs)**

Grammars and Languages: Discussion of Grammars – Formal Definition of a Language – Notions of Syntax Analysis.

UNIT III **(15 hrs)**

Finite Automata, Regular Expressions and Languages: An Informal Picture of Finite Automata - Deterministic Finite Automata - Nondeterministic Finite Automata –An Application: Text Search - Finite Automata with \square Transitions -Regular Expressions - Finite Automata and Regular Expressions – Applications of Regular Expressions – Algebraic Laws for Regular Expressions

UNIT IV **(15 hrs)**

Properties of Regular Languages: Proving languages not to be Regular - Closure properties of Regular Languages- Decision Properties of Regular Languages– Equivalence and Minimization of Automata. **Context - Free Grammars and Languages:** Context - Free Grammars - Parse Trees - Applications of Context - Free Grammars – Ambiguity in Grammars and Languages.

UNIT V **(16 hrs)**

Pushdown Automata : Definition of the Pushdown Automaton - The Languages of a PDA- Equivalence of PDA's and CFG's - Deterministic Pushdown Automata. **Properties of Context - Free Languages :** Normal Forms for Context - Free Grammars - The Pumping Lemma for CFL's - Closure properties of CFL's - Decision properties of CFL's.

COURSE NUMBER MTH19E8	COURSE NAME DIFFERENTIAL GEOMETRY	CATEGORY	L	T	P	CREDIT
		ELECTIVE	71	4	-	3

Preamble

- To introduce the notion of surfaces and their properties.
- To study geodesics and differential geometry of surfaces.

Course Outcomes

Upon the successful completion of the course students

Mapping with Course Outcomes

CO Number	CO Statement	Knowledge Level
CO1	Make clear and concise arguments involving basic notions and constructions of 2-dimensional Riemannian geometry, curves and torsion.	K2
CO2	Identification of important types of curves in surfaces, including principal curves, asymptotic curves and geodesics.	K3
CO3	Enumerate some standard examples in geometry, such as surfaces of constant Gaussian curvature, compact and non -compact surfaces, and surfaces of revolution.	K4
CO4	Analyze Gaussian and mean curvatures using variety of methods including patch computations, direct calculation of the shape operator	K5
CO5	Articulate connections between geometry and other disciplines, possibly including topology, algebra, analysis, or applied mathematics.	K5

S- Strong; M-Medium; L-Low

ELECTIVE VIII - SEMESTER IV
DIFFERENTIAL GEOMETRY (MTH19E8)

UNIT I **(14 Hrs)**

Space Curves: Definition of a space curve - Arc length - tangent - normal and binormal - curvature and torsion - contact between curves and surfaces- tangent surface- involutes and evolutes- Intrinsic equations - Fundamental Existence Theorem for space curves-Helics.

UNIT II **(15 Hrs)**

Intrinsic Properties of a Surface: Definition of a surface - curves on a surface - Surface of revolution - Helicoids - Metric- Direction coefficients - families of curves- Isometric correspondence- Intrinsic properties

UNIT III **(14 Hrs)**

Geodesics: Geodesics - Canonical geodesic equations - Normal property of geodesics- Existence Theorems - Geodesic parallels - Geodesics curvature - Gauss- Bonnet Theorem - Gaussian curvature- surface of constant curvature.

UNIT IV **(14 Hrs)**

Non Intrinsic Properties of a Surface: The second fundamental form- Principal curvature - Lines of curvature - Developable – Developable associated with space curves and with curves on surface - Minimal surfaces - Ruled surfaces.

UNIT V **(14 Hrs)**

Differential Geometry of Surfaces: Compact surfaces whose points are umblics- Hilbert's lemma - Compact surface of constant curvature - Complete surface and their characterization - Hilbert's Theorem - Conjugate points on geodesics.

COURSE NUMBER MTH1622	COURSE NAME ADVANCED COMPUTING TECHNIQUES	CATEGORY	L	T	P	CREDIT
		ALC	-	-	-	5

Preamble

- To understand the basic mathematical elements of the theory of fuzzy sets.
- Introduce concepts in automata theory and theory of computation.
- Identify different formal language classes and their relationships

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Define crisp set, fuzzy sets	K2
CO2	Apply Cryptographic Protocols	K3
CO3	Demonstrate Cryptographic Algorithms	K4
CO4	Apply Automata and Regular expressions	K5
CO5	Analyze finite automata	K5

ALC - SEMESTER IV

ADVANCED COMPUTING TECHNIQUES (MTH1622)

Unit I

Crisp sets - union and intersection of crisp sets - Fundamental properties of Crisp operations - Fuzzy sets - union and intersection of fuzzy sets - Fundamental properties of fuzzy operations.

Unit II

Cryptographic Protocols - Cryptographic Techniques.

Unit III

Cryptographic Algorithms - Mathematical Background - Data encryption Standard - other block ciphers.

Unit IV

Automata and Regular expressions - Finite Automata - Kleene's theorem - derived languages.

Unit V

Finite automata with output - Register machines.

		MTH1623	INTRODUCTION TO ALGORITHMS	ALC	-	-

Preamble

- To introduce the modern study of computer algorithms
- Analyze the asymptotic performance of algorithms.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Define Mathematical foundations	K2
CO2	Apply important algorithmic design paradigms and methods of analysis.	K3
CO3	Demonstrate a familiarity with major algorithms and data structures	K4
CO4	Apply the concept of binary tree find the maximum and minimum points	K5
CO5	Advanced algorithms for research	K5

ALC – SEMESTER IV

INTRODUCTION TO ALGORITHMS (MTH1623)

UNIT I

Mathematical Foundations: Introduction- Growth of Functions- Asymptotic notation- Standard notations and common functions- Summations- Summation formulas and properties- Bounding Summations- Recurrences- The substitution method- The iteration method- The master method- Proof of the master theorem.

UNIT II

Sorting and Order Statistics: Introduction- Heapsort- Heaps- Maintaining the heap property- Building a heap- The heapsort algorithm- Priority queues- Quicksort- Description of quicksort- Performance of quicksort- Randomized versions of quicksort-Analysis of quicksort.

UNIT III

Data Structures: Introduction- Elementary data structures- Stacks and queues- Linked lists- Implementing pointers and objects- Representing rooted trees- Hash Tables- Direct-address tables- hash tables- Hash functions- Open addressing.

UNIT IV

Binary Search Trees: What is a binary search tree?- Querying a binary search tree- Insertion and deletion- Randomly built binary search tree- Red-Black Trees- Properties of red-black trees- Rotations- Insertion- Deletion- Augmenting Data Structures- Dynamic order statistics- How to augment a data structure- Interval trees.

UNIT V

Advanced Data Structures: B- Trees- Definition- Basic operations of B-Trees- Deleting a key from a B-tree- Binomial Heaps- Binomial trees and binomial heaps- Operations on binomial heaps- Fibonacci heaps- Structure of Fibonacci heaps- Mergeable-heap operations- Decreasing a key and deleting a node- Bounding the maximum degree.

IDC Syllabus

M.Com – Quantitative Techniques for Commerce (MTH16A3)

M.Sc (CS & IT) – Statistical Techniques in Practice (MTH18A5)

M.Sc Physics – Tensors and Numerical Methods (MTH16A4)

COURSE NUMBER MTH16A3	COURSE NAME QUANTITATIVE TECHNIQUES FOR COMMERCE	CATEGORY	L	T	P	CREDIT
		IDC	75	-	-	3

Preamble

- To present the Basic concepts of Statistics.
- To introduce different methods for solving statistical method and operation research.
- Enable the students to find the practical applications to the real world problems etc.

Course Outcomes

Upon the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Identify the source of quantifiable problems, recognize and solve. Understand and apply basic concepts and describe mathematical relations and functions.	K2
CO2	Apply the concepts of Quantitative Techniques to solve the problems.	K3
CO3	Determine the correct statistical method and optimization techniques to analyze and evaluate the problems.	K4
CO4	Formulate and interpret the problems by available techniques.	K5
CO5	Evaluate problems by using statistical method and optimization techniques. Apply quantitative techniques to commercial problem and analyze the results.	K6

S- Strong; M-Medium; L-Low

Syllabus**SEMESTER II - M.Com – IDC****QUANTITATIVE TECHNIQUES FOR COMMERCE (MTH16A3)****Unit I (12 Hrs)**

Quantitative approach to management - Sets - events - Probability - additions and multiplication theories - conditional probability - Mathematical expectation - Baye's theories.

Unit II (15 Hrs)

Binomial - Poisson and normal distribution (without derivations & proof - properties). Fitting of these distributions - Correlation - Rank correlation - Regression and regression lines on x and y.

Unit III (15 Hrs)

Test of significance - Large sample test - small sample test - application of chi - Square test - 't' & 'F' distribution.

Unit IV (15 Hrs)

Operation research : origin - meaning - definition - model - Phases - general linear programming - graphical method - simplex method (slack) variable - Transportation problem - method of initial & optimum solutions.

Unit V (18 Hrs)

Queuing theory: Problems from single server - finite and infinite population. Assignment and traveling salesman problems - Network analysis - critical path method - PERT.

COURSE NUMBER MTH18A5	COURSE NAME STATISTICAL TECHNIQUES IN PRACTICE	Category	L	T	P	Credit
		IDC	60	-	-	4

Preamble

- To understand the practical applications in solving problems of Statistical Mathematics.
- To use Statistical tools effectively to solve problems involving Statistics

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Learn the basics of Probability	K2
CO2	Understand the properties of Statistical Distributions	K3
CO3	Use basic combinatorial techniques to calculate probabilities,	K4
CO4	Learn to use Statistical tests and sampling theory.	K5
CO5	Explain practical implications of expectation and variance and how they predict the shapes of distribution and density (mass) functions of a random variable	K5

Syllabus

SEMESTER II– IDC – M.Sc (CS) & M.Sc (IT)
STATISTICAL TECHNIQUES IN PRACTICE (MTH18A5)

UNIT I **(12 hrs)**

Probability- addition and multiplication theorems- problems-conditional probability-mathematical expectations- Bayer's theorem and random variable and probability distribution.

UNIT II **(12 hrs)**

Theoretical distribution: binomial Poisson and normal distribution. Test of hypothesis and significance of large samples.

UNIT III **(12 hrs)**

Test of significance for small samples goodness of fit χ^2 , F distributions– applications. ANOVA (one and two way classification).

UNIT IV **(12 hrs)**

Sampling– statistical Quality control– control charts– single– double sampling plans– acceptance – sampling theory.

UNITV **(12 hrs)**

Partial and multiple correlation– significance of partial correlation– multiple regression analysis.

S- Strong; M-Medium; L-Low

SEMESTER II – M.Sc (Physics) – IDC**TENSOR & NUMERICAL METHODS (MTH16A4)****Unit I****(9Hrs)**

Tensor Analysis Definition of Tensors - Contravariant - covariant and mixed tensors - addition and subtraction of Tensors - Summation convention - Symmetry and Anisymmetry Tensor - Contraction and direct product - Quotient law.

Unit II**(9 Hrs)**

Numerical solutions of Algebraic and Transcendental Equation: Method of False position (Regula Falsi method) -Newton -Raphson Method -Solution of Simultaneous Linear Algebraic Equations: Gauss Elimination Method -Interpolation with equal intervals: Gregory -Newton's forward interpolation formula for Equal Intervals - Gregory -Newton's Backward interpolation formula for Equal Intervals - Interpolation with unequal Intervals: Lagrange's Interpolation Formula for unequal Intervals - Method of Least Squares: Fitting a straight line - Fitting a Second Degree Parabola.

Unit III**(9 Hrs)**

Numerical Differentiation: Values of the derivatives of y - based on Newton's Forward Interpolation formula - Values of the derivatives of y - based on Newton's Backward Interpolation formula.

Unit IV**(9 Hrs)**

Numerical integration: Newton -Cote's Quadrature Formula - Trapezoidal rule - composite trapezoidal rule - Simpson's one - third rule - composites Simpson's one - third rule - Simpson's three - eighths rule - composite Simpson's three eighths rule.

Unit V**(9 Hrs)**

Numerical solutions of ordinary differential equations: Euler's method - Runge -Kutta formulas of first and second order - Runge - Kutta formulas of the third and fourth order - Runge Kutta formula for the solution of second order differential equation.

Text Book

S. No	Author	Title of the book	Publishers	Year of Publication
1.	A.W.Joshi	Matrices and Tensors in Physics Unit I Part II – Chapter - 15,16,17	New Age International Publishers, Revised Edition	2010
2.	M.K.Venkataraman	Numerical methods in science and engineering Unit II,III,IV,V Unit:II Chapter I – Sec:1.6,1.7,1.8 Chapter III – Sec: 4,5,6 ChapterIV – Sec:1,2,3 Chapter VI - Sec: 6.1,6.3,6,4 Chapter VIII – Sec:4 UNIT:III Chapter:IX – Sec:1,2,3 UNIT:IV Chapter IX – Sec:7,8,10,11 UNIT:V Chapter XI- Sec: 10,13,14,15,16	National Publisher Company	1999

Reference Books

S. No	Author	Title of the book	Publishers	Year of Publication
1.	V. Rajaraman	Computer Oriented Numerical Methods	Prentice–Hall of India	1993
2.	P.Kandasamy	Numerical methods	S.Chand and company limited, NewDelhi	2003
3.	S.C. Chapra and P.C.Raymond	Numerical methods for Engineers	Tata McGrawHill, NewDelhi	2000
4.	<u>Shaheer Khan</u>	Tensor Analysis and Its Applications	Partridge India	2015

Pedagogy

Chalk & Talk, PPT, Group discussion, Seminar, Quiz, assignment

Course Designers

1. Mrs.S.Aiswarya, Assistant Professor
2. Dr.C.R.Parvathy, Assistant Professor
