Autonomous and Affiliated to Bharathiar University
Reaccredited with A⁺⁺ grade by NAAC
Peelamedu, Coimbatore-641004

DEPARTMENT OF CHEMISTRY

CHOICE BASED CREDIT SYSTEM (CBCS)

&

LEARNING OUTCOMES - BASED CURRICULUM FRAMEWORK (LOCF)

MASTER OF SCIENCE CHEMISTRY

2025 – 2027 BATCH

Semester –I, II & III

PROGRAMME LEARNING OUTCOMES (PLO's)

After completion of the programme, the student will be able to

PLO1 : accept the common responsibility to preserve the environment and to contribute to the development

PLO2 : acquire in depth knowledge on core concepts of theoretical and practical chemistry to the subject areas namely organic, inorganic, physical, analytical and computational chemistry

PLO3 : attain communication skill- written, verbal, logical and digital

PLO4 : explore the relative choice of Generic Electives (GE), Skill Enhancement Courses (SEC) and Ability Enhancement Courses (AEC)

PLO5 : enhance the ability to execute Laboratory procedures of organic, inorganic and physical systems and setting standard procedures

PROGRAMME SPECIFIC OUTCOMES (PSO's)

The students at the time of graduation will

PSO1 : possess skills in safe handling of chemicals taking into account their physical and chemical properties.

PSO2 : able to apply the theoretical concepts of instrument that are commonly used in most chemistry fields as well as interpret and use data generated in instrumental chemical analyses.

PSO3 : be capable to employ critical thinking and scientific inquiry in the performance, design, interpretation and documentation of laboratory experiments, at a level suitable to succeed at an entry-level position in chemical industry or a chemistry graduate program

Examination System

Pattern:

Semester system will be followed. A semester consists of a minimum of 90 working days excluding the days of conduct of ESE. There will be Continuous Internal Assessment (CA) to evaluate the performance of students in each course and the End Semester Examination will be held at the end of every semester.

Weightage assigned to various components of Continuous Internal Assessment

Theory

CIA Test : 5 marks **(conducted for 45 marks after 50 days)**

Model Exam : 7 marks **(conducted for 75 marks after 85 days)**

Seminar/Assignment/Quiz : 5 marks

Class Participation : 5 marks

Attendance : 3 marks

Total : 25 Marks

Practical

Lab Performance : 7 marks

Regularity : 5 marks

Model Exam : 10 marks

Attendance : 3 marks

Total : 25 marks

CA Question Paper Pattern and distribution of marks - (First 3 Units)

CA Question from each unit comprising of

One question with a weightage of 2 Marks : $2 \times 3 = 6$

One question with a weightage of 5 Marks (Internal Choice at the same CLO level) : $5 \times 3 = 15$

One question with a weightage of 8 Marks (Internal Choice at the same CLO level) : $8 \times 3 = 24$

Total : 45 Marks

End Semester Examination – Question Paper Pattern and Distribution of Marks

Core and Elective Courses

ESE Question Paper Pattern: $5 \times 15 = 75$ Marks

Question from each unit comprising of

One question with a weightage of 2 Marks: $2 \times 5 = 10$ marks

One question with a weightage of 5 Marks (Internal Choice at the same CLO level): $5 \times 5 = 25$

One question with a weightage of 8 Marks (Internal Choice at the same CLO level): $8 \times 5 = 40$

PG-IDC and Special Course:

Section A 5 questions (Internal choice) :25 marks

Section B 5 questions (Internal choice) :75 marks

Total :100 marks

Research Methodology

Section A - 5 questions (Internal choice) :25 marks

Section B - 5 questions (Internal choice) :75 marks

Total : 100 Marks

ESE Practical Pattern

The End Semester Examination will be conducted for a maximum of 75 marks respectively with a maximum 15 marks for the record and other submissions if any.

Criteria for Attendance:

3 Marks

(Attendance 75% - 80% - 1 Mark, 81% - 90% - 2 Marks, 91% - 100% - 3 Marks)

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2501	INORGANIC CHEMISTRY I	THEORY	58	2	-	4

Preamble

To make the students to gain knowledge about structure and bonding in inorganic polymers; learn the theories of isopoly, heteropoly acids, anions and inorganic polymers; study the structural determination of inorganic crystals.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	understand the concepts of inorganic polymers and ionic crystals	K2
CLO2	Extend the applications of inorganic compounds as rings, clusters, polyacids and solid state crystals	K3
CLO3	Assess the importance of inorganic compounds as polymeric structures/identify the type and shape of ionic crystals	K3
CLO4	Distinguish and classify inorganic solids/rings/clusters and their defects	K4
CLO5	Determine the structures of inorganic polymers/crystals and interpret their structural differences	K5

S-Strong, M- Medium

INORGANIC CHEMISTRY I (MCE2501)
(Inorganic Chemistry and Solid State Chemistry) (58 Hrs)

Unit – I (12 Hrs)

Inorganic Polymers- I

Chain – Catenation, Heterocatenation - Silicate minerals, orthosilicates, pyrosilicates, zeolites-Intercalation compounds-preparation and properties.

Rings- Borazines- Preparation, properties and structure, Phosphazenes – Preparation, properties and structure.

Cages- PS cages, PO cages.

Unit – II (11 Hrs)

Inorganic Polymers- II

Introduction, general properties, glass transition temperature, classification. One dimensional conductors- Nitrides of sulphur - S_4N_4 - Preparation and structure, $S_4N_3^+$ - Preparation and structure, $(SN)_x$ - Preparation and structure. Silicon based polymers – Preparation, properties and types of silicones.

Unit – III (12 Hrs)

Isopoly and Heteropoly Acids and Anions

Introduction, polymerization of CrO_4^{2-} anion, polymerization of molybdates, tungstates, vanadates, niobates and tantalates. Isopoly anions and isopoly acids of Mo^{6+} and W^{6+} , isopolyvanadates, isopolyniobates and isopolytantalates. Heteropoly anions and heteropoly acids- different types, important reactions of iso and heteropoly anions.

Unit – IV (11 Hrs)

Solid State Chemistry – I

Structure- Types and classification of solids, distinction between crystalline and amorphous solids. Unit cell, Bravais lattice, classification of crystals based on bond type and packing in crystals. Imperfections in crystals - Types of defects, stoichiometric defects - Schottky and Frenkel. Non-stoichiometric defects – Metal excess and metal deficient, consequences of metal deficiency defects.

Unit – V (12Hrs)

Solid State Chemistry – II

Inorganic crystals - Coordination number, radius ratio rule and shapes of ionic crystals. Structures of ionic crystals - AX type: CsCl, ZnS (Zinc blende, Wurtzite), AX₂ type: CaF₂, TiO₂, CdI₂. X - ray diffraction- Powder Method, Single crystal methods, High temperature powder diffraction- Principle and uses.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2502	ORGANIC CHEMISTRY I	THEORY	73	2	-	5

Preamble

To enable the students to understand the concept of aromaticity, mechanism of substitution and elimination reactions in aliphatic and aromatic compounds & stereochemistry of organic compounds.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	identify and analyze the aromaticity, different types of mechanism	K2
CLO2	develop skills for identifying the kinetics and stereochemistry of thereactants and products	K2
CLO3	predict the stereochemistry and apply the mechanism for synthesizing organic compounds	K3
CLO4	analyze and compare the substitution & elimination reaction mechanism	K4
CLO5	employ the concepts to design new organic reactions with specific stereochemistry	K5

S - Strong; M-Medium

ORGANIC CHEMISTRY I MCE2502
(Organic Reaction Mechanism and Stereochemistry) (73 Hrs)

Unit I **(15Hrs)**

Aromaticity

Criteria - Huckel's rule – Aromatic character in benzene, four, five, seven, eight membered rings- Aromaticity of benzenoid and heterocyclic compounds. Non-benzenoid aromatics- azulene, ferrocene, tropolone, sydnones and annulenes (synthesis not required) - Non aromatic and anti-aromatic systems. Aromatic compounds in biochemistry – phenyl alanine, tyrosine, tryptophan, purine, pyrimidine.

Reaction Mechanism

Types of reactions and mechanisms, Non kinetic methods- Product analysis, intermediate criteria (isolation, trapping and detection)- Isotopic labeling and cross over experiments- Stereochemical evidence. Kinetic methods- Mechanistic implications of rate law- Isotope effects. Kinetic and thermodynamic control of reactions - Hammonds postulates, Curtin Hammett Principle, linear free energy relationship- Hammett and Taft equations.

Unit II **(14 Hrs)**

Aliphatic Nucleophilic Substitution

The S_N1 , S_N2 & S_Ni mechanisms. The neighbouring group mechanism, neighbouring group participation by π & σ bonds, anchimeric assistance. Nucleophilic substitution at an allylic, aliphatic, trigonal and vinylic carbon. Reactivity effects of substrate structure, attacking nucleophile, leaving group and reaction medium, phase transfer catalysis, ambident nucleophiles and ambident substrates. Oxygen nucleophiles - Williamson reaction

Aromatic Nucleophilic Substitution

The S_NAr , S_N1 , Benzyne and SR_N1 Mechanisms. Reactivity – Effect of substrate structure, leaving group and attacking nucleophile. O & S nucleophiles - Bucherer reaction, Rosenmund reaction, Von Richter rearrangement.

Unit III **(15 Hrs)**

Aliphatic Electrophilic Substitution

Bimolecular mechanisms – S_E2 (front), S_E2 (back) and S_E^i . Unimolecular mechanism- S_E1 mechanism, Substitution accompanied by double bond shifts. Hydrogen electrophiles- hydrodehydrogenation, Halogen electrophiles - Halogenation of aldehydes, ketones and carboxylic acids, Nitrogen electrophiles - aliphatic diazonium coupling, Stork-enamine reaction, Sulphur electrophiles – sulphonation, Carbon electrophiles - acylation, alkylation.

Aromatic Electrophilic Substitution

Mechanism, orientation and reactivity, the ortho/para ratio. Reactions involving nitrogen electrophiles: nitration, nitrosation and diazonium coupling, ipso substitution. Sulphur electrophiles: Sulphonation, Jacobsen rearrangement. Carbon electrophiles: Alkylation, acylation, arylation reactions - Scholl reaction, Gattermann reaction, Gattermann-Koch reaction, Reimer- Tiemann reaction, Kolbe- Schmidt reaction, Houben- Hoesch reaction, Vilsmeier- Haack reaction, Hoffmann-Martius reactions.

Unit IV**(14 Hrs)****Elimination Reactions**

E1, E2 and E1cB mechanism, orientation of double bond- structural and stereochemical factors governing eliminations - Hoffmann and Saytzeff rules, Bredt's rule. Effect of changes in the substrate, base, leaving group and medium in E1, E2 and E1cB reactions, syn-anti dichotomy, E1-E2-E1cB spectrum, Elimination vs substitution. Pyrolytic elimination- Chugaev reaction, Hoffmann degradation, Cope elimination.

Unit V**(15 Hrs)****Stereochemistry**

Optical isomerism: Concept of chirality, R, S - nomenclature of compounds having more than one chiral centres.

Topicity and Prochirality: Identification of Homotopic, Enantiotopic, Diastereotopic Ligands and Faces. Prochirality – pro R, pro S, Re and Si faces.

Asymmetric Synthesis - Cram's and Prelog's Rules, Felkin-Ahn modification, Chiral Auxiliaries - Evan Aldol Reaction, Chiral Reagents - Epoxidation (Sharpless' Reaction).

Stereospecific and Stereoselective Reactions

Axial chirality - Optical isomerism of biphenyl, allenes and spirens. Planar chirality - Optical isomerism of ansa compounds and cyclophanes. Helicity - Optical isomerism of over- crowded molecules. Stereochemistry of sulphur and nitrogen compounds.

Geometrical Isomerism: Stereoisomerism of cyclic compounds (upto six membered ring) - Aldoximes and ketoximes.

Conformational Analysis: Configuration and conformation. Conformation of cyclic compounds - cyclohexane, decalins, perhydrophenanthrenes. Effect of conformation on reactivity.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2503	PHYSICAL CHEMISTRY I	THEORY	73	2	-	5

Preamble

To learn about classical and statistical thermodynamics, understand and apply the concept of fugacity, activity, chemical potential, third law of thermodynamics, probability, ensembles and distribution laws.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	understand the concept of fugacity, third law of thermodynamics, Maxwell – Boltzmann distribution law	K2
CLO2	interpret the physical significance of chemical potential and ensembles	K2
CLO3	calculate the molecular velocities based on Maxwell Boltzmann distribution law, fugacity and activity	K3
CLO4	apply thermodynamic concepts to evaluate the relationship between thermodynamic properties, translational, rotational, vibrational and electronic partition functions, Bose Einstein and Fermi-Dirac distribution laws	K4
CLO5	evaluate statistical thermodynamics to the properties of identical indistinguishable particles like electrons, Debye theory	K4

S - Strong; M-Medium

PHYSICAL CHEMISTRY PAPER I MCE2503
(Classical and Statistical Thermodynamics) (73Hrs)

Unit I **(14Hrs)**

Classical Thermodynamics

Chemical potential - Gibbs - Duhem equation - determination of partial molar quantities. Clausius - Clapeyron equation and its applications. Fugacity - definition - determination of fugacity of gases by graphical method, from equation of state, approximation method and generalized method - variation of fugacity with temperature. Fugacity and the standard state for non-ideal gases - fugacity coefficient, fugacity of mixture of non-ideal gases. Activity and activity coefficient. Standard states - activity of solutions.

Unit II **(14Hrs)**

Third Law of Thermodynamics

Nernst heat theorem, third law of thermodynamics - need for third law, different forms of stating third law, thermodynamic quantities at absolute zero, probability and third law, statistical meaning of third law and apparent exceptions, negative absolute temperature.

Probability and Ensembles

Theorems of permutations, combinations and probability. Thermodynamic probability to molecular systems - states of maximum thermodynamic probability of systems involving energy levels.

Distinguishable and indistinguishable particles. Microstates and macrostates. Ensembles – definition - microcanonical, canonical, grand canonical and average ensembles.

Unit III **(15 Hrs)**

Maxwell Boltzmann Statistics

Stirling's approximation formula, Maxwell Boltzmann distribution law – assumptions, derivation for the system having non-degenerate and degenerate energy levels. Experimental verification of Maxwell's distribution of molecular velocities by Stern method. Limitations of Maxwell Boltzmann distribution law.

2D Velocity Distribution Law

Phase space, Maxwell's distribution law of molecular velocities, evaluation of α and β in Boltzmann statistics. Evaluation of average velocity, root mean square velocity and most probable velocity from distribution law of molecular velocities, molecular velocities and energies of an ideal gas.

Unit IV **(15Hrs)**

Equipartition of Principle of Energy

Calculation of heat capacities of ideal gases - limitations.

Partition Functions Definition - explanation - molecular partition function - molar partition function - relationship between partition function and thermodynamic properties E , H , S , A , G , C_V and C_P . Translational partition functions - Sackur tetrode equation. Rotational partition functions – ortho/para hydrogen - vibrational partition functions - electronic partition functions. Evaluation of thermodynamic properties for mono and diatomic ideal gas molecules from partition functions.

Unit V**(15 Hrs)****Quantum Statistics**

Bose Einstein distribution law - derivation - entropy of boson - applications. Derivation of Planck's black body radiation law. Bose Einstein condensation. Helium at low temperature. Fermi - Dirac distribution law - derivation, entropy of fermions, applications - electron gas, fermi energy of free electrons at absolute zero. Heat capacity of free electrons in metals. Heat capacity - Einstein theory and Debye theory, Debye T-cube law, comparison of Maxwell Boltzmann, Bose Einstein, Fermi - Dirac statistics.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2504	ANALYTICAL TECHNIQUES IN CHEMISTRY	THEORY	58	2	-	4

Preamble

To enable the students to analyze various chromatographic techniques, determine molecular configuration and conformation using ORD and CD, phase transitions and thermal properties using TGA, DTA, and DSC; understand the principles, instrumentation of electron-ion and atomic spectroscopy techniques like AAS, FES.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	explain the working principles and theoretical concepts of HPLC, GC, SFC, ORD, CD and spectroscopic techniques	K2
CLO2	analyze and compare different analytical methods in terms of their accuracy, sensitivity, and suitability for various chemical and industrial applications	K3
CLO3	interpret chromatograms, spectroscopic data, and thermal analysis curves to identify chemical compounds and assess their properties	K4
CLO4	apply AAS techniques to detect and quantify trace metals in environmental, biological, and industrial samples.	K4
CLO5	analyze the advantages and limitations of different analytical techniques	K4

ANALYTICAL TECHNIQUES IN CHEMISTRY MCE2504 (58Hrs)

Unit I (12Hrs)

Chromatography

High Pressure Liquid Chromatography (HPLC) - Introduction, characteristic features of HPLC, principle, column processes & band broadening, instrumentation and application.

Gas Chromatography (GC) - Introduction, principle, theory, instrumentation, evaluation of gas chromatogram, identification of chromatogram, plate theory and applications.

Super Critical Fluid Chromatography (SFC) - Characteristics of super critical fluids, comparison of SFC with HPLC & GLC and applications.

****Interpretation of chromatogram using caffeine, mixture of amino acids, aflatoxin in milk, separation of phyto constituents.**

Unit II (11 Hrs)

Optical Rotatory Dispersion & Circular Dichroism : Introduction, polarised light & chiroptical properties - linearly & circularly polarized light, circular birefringence & circular dichroism. Instrumentation – Automatic recording spectropolarimeters (ORD), Circular dichrometer. ORD and CD curves – plain curves, cotton effect curves. Empirical & Semi empirical rules - Axial haloketone rule, Octant rule, Helicity rule, Lowe's rule. Application of Axial haloketone rule & Octant rule for ketones – absolute configuration, position of functional group, conformation, conformational mobility; Helicity in dienes, Lowe's rule for the configuration of allenes.

Unit III (12Hrs)

Thermoanalytical Methods

Thermogravimetric analysis & differential thermal analysis – Principle, various components with block diagram - TGA & DTA curves of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$, $\text{MgC}_2\text{O}_4 \cdot \text{H}_2\text{O}$ & $\text{Ca}(\text{OOCCH}_3)_2 \cdot \text{H}_2\text{O}$ Simultaneous DTA-TGA curves of SrCO_3 in air & $\text{CaC}_2\text{O}_4 \cdot \text{H}_2\text{O}$ in air & CO_2 . Factors affecting TGA & DTA curves. DSC - Principle, Instrumentation – Power compensated, Heat-flux, Modulated DSC instruments. Applications: glass transition temperatures, reaction kinetics, crystallinity and crystallization rate.

****Interpretation of thermogram using TGDTA (Tris(thiourea)copper (II) chloride, Potassium tris(oxalato)ferrate(III))**

Unit – IV (12 Hrs)

Electron-Ion Spectroscopy

Introduction – general techniques in surface spectroscopy. Basic principles of electron spectroscopy – photoelectric effect and photoelectron spectroscopy (PES). Phototelectron spectroscopy and Koopman's theorem. X-ray photoelectron spectroscopy – instrumentation & applications. Principles of Ultraviolet Photoelectron spectroscopy (UPS) and Auger Electron spectroscopy (AES).

****Interpretation of XPS of metal oxides (MnO_2 , Co_3O_4 and NiO), metal hydroxides ($\text{Co}(\text{OH})_2$, $\text{Ni}(\text{OH})_2$) and organic compounds (graphenes and carbon nitrides).**

Unit – V**(11 Hrs)****Atomic Spectroscopy**

Atomic Absorption Spectroscopy (AAS) – introduction, principle, procedure, preparation of samples, measurement of atomic absorption, sensitivity, calibration – methods, advantages and disadvantages of atomic absorption, precision and accuracy. Flame Emission – relationship between atomic absorption and Flame Emission Spectroscopy (FES) – advantages of atomic absorption over flame emission. Line widths – instrumentation – sources – monochromators – filters – optical system and detectors - indicators. Flame – profiles – flame atomization – oxidants. Fuels – types of burners, interferences – cation and anion interferences, analytical applications.

****Determination of trace metal ions using AAS from industrial effluents (electroplating, paint and textile industries)**

**** Not for examination**

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P1	ORGANIC CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To enable the students to separate two components in an organic mixture, identify the separated components by qualitative tests, determine the boiling point / melting point of components and prepare organic compounds

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	determine boiling point /melting point	K2
CLO2	identify the nature of the organic compounds	K2
CLO3	develop skills in the synthesis of organic compounds	K3
CLO4	separate organic mixtures by solvent extraction	K4
CLO5	analyse the food samples using HPLC	K5

Mapping with Programme Learning Outcomes

S - Strong; M-Medium

ORGANIC CHEMISTRY PRACTICAL I MCE25P1 (120 Hrs)

1. Qualitative Analysis:

Analysis of two component mixtures – Separation, identification of components and determination of melting point/ boiling point of the components.

2. One stage preparations and purification by recrystallization technique

- (i) m-dinitrobenzene from Nitrobenzene
- (ii) Resacetophenone from Resorcinol
- (iii) Tribromoaniline from Aniline
- (iv) Diazoaminobenzene from Aniline
- (v) Anthranilic acid from Phthalimide
- (vi) Methyl orange from sulphanilic acid

3. Characterization of any two of the above compounds by IR spectra

Note: A minimum of five organic mixtures should be done by each student.

4. Analysis of food samples using HPLC (Group Experiment)

Text Book: LAB MANUAL - Prepared by Faculty, Department of Chemistry, PSGR Krishnammal College for Women

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P2	INORGANIC CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To enable the students to separate the common and rare cations in a mixture, characterize two common and two less familiar cations, estimate quantitatively magnesium, nickel and zinc by complexometry and prepare inorganic complexes

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	identify the common and rare cations	K2
CLO2	estimate the metal ions in complexes	K2
CLO3	interpret IR spectra of metal complexes	K3
CLO4	analyse and report cations in a mixture	K4
CLO5	develop skill in synthesizing inorganic complexes	K5

INORGANIC CHEMISTRY PRACTICAL I MCE25P2 (120 Hrs)

1. Qualitative Analysis

Qualitative Analysis employing semi micro methods & spot tests of mixtures of common cations & ions of the following less familiar elements - Molybdenum, Thallium, Tungsten, Selenium, Tellurium, Cerium, Thorium, Titanium, Zirconium, Vanadium, Beryllium, Uranium & Lithium.

2. Titrimetry

Complexometric titrations using EDTA - Estimations of Magnesium, Nickel & Zinc.

3. Preparation of Inorganic Complexes

- i. Tris(thiourea)copper (I)chloride
- ii. Potassium tris(oxalato)ferrate(III)
- iii. Hexammine cobalt (III)chloride
- iv. Ammonium hexachlorostannate(IV)
- v. Tetramminecopper (II)sulphate

4. Characterization of any two of the above complexes by IR spectra

5. Preparation of CuO nanoparticles and its characterization using Nano Particle Track Analyzer (Group Experiment)

Text Books: LAB MANUAL - Prepared by Faculty, Department of Chemistry, PSGR Krishnammal College for Women

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P3	PHYSICAL CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To make the students to understand the principle and to carry out the potentiometric titrations, determine the pH and pKa values of buffers and acids, determine the molecular weight of solutes and construct the phase diagram of two components systems.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	set up an electrode to prepare for a potentiometric titration	K1
CLO2	infer the molecular weight of chemical compounds from Kf values by Rast micro method	K2
CLO3	interpret the strength of the solutions and Ka values by potentiometry	K3
CLO4	determine EMF of silver & copper electrode	
CLO5	construct and analyze Phase diagrams	K4

S- Strong; M-Medium

PHYSICAL CHEMISTRY PRACTICAL I MCE25P3 (120Hrs)

1. Molecular weight determination by Rast Micro Method
2. Phase study: Simple Eutectic System & Compound Formation
3. Determination of Transition Temperature of Salt Hydrate
4. Viscosity: Variation of viscosity of liquids with temperature
5. Electromotive Force:
 - (i) Determination of Standard Potentials (Cu, Ag)
 - (ii) Determination of pH & pKa values using Hydrogen & Quinhydrone electrodes
6. Potentiometric Titrations:

Acid Base titrations

 - i. Titration of HCl vs NaOH
 - ii. Titration of mixture of acids against a strong base
 - iii. Titration of CH₃COOH vs NaOH

Redox titrations

 - iv. Titration of Ferrous ammonium sulphate against Potassium dichromate
 - v. Titration of Potassium iodide against Potassium permanganate

Precipitation titrations

 - vi. Estimation of KI by titration with AgNO₃ using KCl as standard.
 - vii. Titration of mixture of halides against AgNO₃ solution
7. Determination of solubility product of a sparingly soluble salt (Concentration Cell & Chemical Cell)

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2505	ORGANIC CHEMISTRY II	THEORY	58	2	-	4

Preamble

To enable the students to understand the applications of reagents in organic synthesis, gain knowledge about the mechanism of molecular rearrangements, learn the stereochemistry of pericyclic reactions by correlation diagram, FMO and PMO methods, understand the principles of photochemistry, retro synthesis and their applications.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	understand the use of an organic reagents in organic synthesis, types of rearrangements and pericyclic reactions, requirements for retrosynthesis, nature of interaction of an organic compound with light	K2
CLO2	recognize and analyze the mechanisms of various molecular rearrangements and photoreactions, classify pericyclic reactions and molecular systems, recognize a specific reagent for an organic conversion	K3
CLO3	interpret the product formation in any pericyclic reactions based on the stereochemical methods, interpret a mechanism for a photochemical reaction, identify the various products obtained in a rearrangement reaction	K3
CLO4	apply retro synthesis to design synthetic routes for synthesis of organic compounds, Woodward–Hoffmann rules to explain pericyclic reaction, justify the formation of rearranged product, construct a correlation diagram to predict the feasibility of a pericyclic reaction	K4
CLO5	appreciate the role of organic reagents, rearrangement reactions, various pericyclic reactions, protecting groups and photochemistry and their significant applications in research	K5

S - Strong; M-Medium

ORGANIC CHEMISTRY II - MCE2505 - 58 HRS
(Reagents, Rearrangements, Pericyclic Reactions, Retro Synthesis & Photochemistry)

Unit I (11Hrs)

Reagents in Organic Synthesis

Use of the following reagents in organic synthesis and functional group transformations - LiAlH_4 , NaBH_4 , lithium dimethyl cuprate (LDC), lithium diisopropyl amide (LDA), diethyl zinc, dicyclohexylcarbodiimide (DCC), 1,3-dithiane, tri-n-butyl tin hydride, osmium tetroxide, DDQ and SeO_2 .

Unit II (12 Hrs)

Molecular Rearrangements

Migration to carbonyl carbon: Neber rearrangement, Rearrangement of electron deficient nitrogen and oxygen: Dienone – Phenol, Favorskii, Fries, Wolf, Benzidine, Hydroperoxide, Steven's, Demzanov, Sommet-Hauser, Nazarov, Chapman and Wallach rearrangement,

Unit III (12 Hrs)

Pericyclic Reaction

Molecular orbital symmetry. Classification of pericyclic reactions. Electrocyclic reactions – $4n$ and $4n+2$ systems, Woodward –Hoffmann rules, Correlation diagram, FMO and PMO approach (1, 3-dienes and 1, 3, 5-trienes). Cycloaddition - Antarafacial and suprafacial additions, $4n$ and $4n+2$ systems, 1, 3- dipolar addition, Diel's Alder reaction. Sigmatropic Rearrangement - Suprafacial and antarafacial shifts of hydrogen, [1,3] & [1,5] - H & alkyl shift, Cope, Claisen and di- π methane rearrangement.

Unit IV (12 Hrs)

Retro Synthesis

Definitions of some terms used in retro synthesis, guidelines for choosing disconnections - Guidelines 1 to 3. One group C-X disconnections - carbonyl derivatives, alcohols and olefins. Chemoselectivity- introduction, Guidelines 1 to 7. Reversal of polarity (Umpolung) – definition, Umpolung reagents (Epoxides, α – halo ketones, nitro compounds).

Protecting Groups

Introduction. Protection of alcohols - principle, protecting group for alcohols- acetals/ketals and ethers. Protection of carbonyl groups- principle, protecting group for carbonyl compounds- acyclic acetals and ketals. Protection of carboxylic acid groups- principle, protecting group for carboxylic acid – methyl ester.

Unit V (11 Hrs)

Organic Photochemistry

Introductory theory of light absorption, photophysical processes - Jablonski diagram. Photochemical reactions of ketones - Norrish type I and II, PaternoBuchi reaction, photoreduction of ketones, photochemistry of α , β -unsaturated ketones. Photochemical reactions of olefins – cis-trans isomerism, dimerization reactions, photochemistry of butadiene, photooxidation, photochemistry of aromatic compounds.

2. Dr. Sowmya Ramkumar

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2506	PHYSICAL CHEMISTRY II (Group Theory and Quantum Chemistry)	THEORY	58	2	-	4

Preamble

To enable the students acquire knowledge about multiplication table for point groups, learn the application of group theory in vibrational spectroscopy and determination of hybridization types in nonlinear molecules, understand the significance of operators and their use in quantum mechanics, learn about the wave nature of particles, derivation for Schrodinger wave equations and their applications in one electron and many electron atoms.

Course Outcome

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	identify the point groups, reducible and irreducible representations, failure of classical mechanics and the need for quantum mechanics	K2
CLO2	Explain the Symmetry, groups, point groups, reducible and irreducible representations, failure of classical mechanics and the need for quantum mechanics, normalization of wave functions and separation of variables	K2
CLO3	construct the Group multiplication tables and character table for point groups; associate the postulates of quantum mechanics with Schrodinger Wave Equation and 1D box, harmonic oscillator, Shapes of s and p orbitals	K3
CLO4	Analyze the IR and Raman active vibration modes for molecules, solving SWE for 3D and SHO, wave equation, Approximation, Perturbation and Variation methods	K4
CLO5	relate the types of hybridization in nonlinear molecules based on group theory, Separate the variables for the H-atom problem and predict the radial/probability functions and curves, application of methods of He atom, wave function of many electron atoms.	K5

Mapping with Programme Learning Outcomes

CLO5	S	S	S	M	S	M	S

S - Strong; M-Medium

PHYSICAL CHEMISTRY II - MCE2506 - 58 HRS
(Group Theory & Quantum Chemistry)

Unit I
(12Hrs)

Symmetry Elements and Symmetry Operations

Definition of identical and equivalent elements – Configurations – Symmetry operations and symmetry elements – Rotation – Axis of symmetry – Reflections – Symmetry planes – Inversion, centre – improper rotations – Rotation- Reflection axis – Effect of performing successive operations (Commutative and non – commutative) – Inverse operations.

Groups and their basic properties

Definition of a group – Basic properties of a group – Definition of Abelian group – Isomorphic group – Similarity transformation and classes – Group multiplication tables- Symmetry classification of molecules into point groups (Schoenflies symbol only)- Difference between point group and space group.

Matrices

Definition of matrix & its types– Matrix multiplication (Commutative and non-Commutative) determination of inverse of a matrix, block multiplication of matrices – Addition and subtraction of matrices – Matrix notations for symmetry operations of C_{2v} and C_{3v} point groups (use of vectors) construction of character tables for C_{2v} and C_{3v} point groups.

Unit II (12Hrs)

Reducible and Irreducible representations

Definition of reducible and irreducible representations – Irreducible representation as orthogonal vectors – Direct product rule – The Great Orthogonality Theorem and its consequences (statement only, proof not needed)- Determination of the characters for irreducible representation of C_{2v} and C_{3v} point groups – using the orthogonality theorem – Calculation of character values of reducible representations per unshifted atom for each type of symmetry operation – Determination of total cartesian representation – Determination of direct sum from total cartesian representation. Type of hybridization of atomic orbitals in acetylene, CH_4 and $[PtCl_4]^{2-}$.

Group theory and Vibrational spectroscopy

Vibrational modes as basis for group representation – Symmetry selection rules for IR and Raman spectra (Mutual Exclusion Principle – Classification of vibrational modes).

Unit III (12Hrs)

Birth and Postulates of Quantum Mechanics

Failure of classical mechanics- The need for quantum mechanics.

Functions - Real, complex, odd, even, orthogonal and normalized functions.

Operator - linear and non-linear, differential, Hermitian, Hamiltonian, momentum (linear and angular) commutator (Theorems) and non- commutators, Eigen functions and eigen values.

Postulates of quantum mechanics-Statements and Discussion

Schrodinger Wave Equations - (Time dependent and time independent); Requirements of the acceptable wave function (solution not needed).

Unit IV (11Hrs)

Quantum Mechanical models/ Applications

Particle in 1D box-quantization of energy, normalization of wave function, orthogonality/

orthonormal set of particle. Particle in 3D box- separation of variables, degeneracy Harmonic Oscillator-wave equation and its solution for diatomic molecule. Rigid Rotor- wave equation and its solution for diatomic molecule (solution not needed).

Unit V

(11Hrs)

Application of Quantum Mechanics to Hydrogen and Poly electron atom

H- atom (H – like species) - wave equation, separation of variables (solving of radial equation is not needed but nature of the solution to be given). Radial wave function, radial distribution curves, probability wave function, probability distribution curves, shapes of s and p orbitals only. Approximation methods - Need for approximation. Perturbation and Variation methods (1st order only) - Applications of the methods to Helium atom. Born-Oppenheimer Approximation method; Hydrogen molecular ion - Treatment of the ground state by LCAO-MO method. Helium atom- Electron spin, Pauli Exclusion Principle, Slater determinants – Approximate wave function of many electron atoms. Electronic structure of conjugated systems- Huckel method applied to ethylene and butadiene systems.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE2507	SPECTROSCOPY	THEORY	43	2	-	3

Preamble

To enable the students to understand the principles, instrumentation of various spectroscopic techniques, the effects of solvents and molecular parameters on UV and IR absorptions, the applications of spectral data to predict the structure of compounds.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	identify the characteristic values for various spectral methods and recognize the principles of spectroscopic techniques as a qualitative and quantitative method	K2
CLO2	distinguish the different isomers, nature of bonding, type of electronic transition based on the spectral data	K2
CLO3	relate the g factor, nuclear spin, and hyper fine coupling constant with structure of the complexes and apply the spectral data in determining the structure of unknown sample	K3
CLO4	infer the fragmentation pattern, functional group present, nature of proton and carbon present in the molecule	K4
CLO5	predict the structure of compound based on spectral data and evaluate the structure of complex molecules using 2D NMR techniques	K5

S - Strong; M-Medium

SPECTROSCOPY - MCE2507 - 43 HRS

Unit I (8 Hrs)

UV and Visible Spectroscopy

Electronic excitation, origin of different bands - intensity of bands, selection rules, laws of photometry, simple chromophoric groups, factors affecting transitions - solvent effect, effect of steric hindrance, effect of conjugation. Woodward's rule for calculating absorption maximum in conjugated dienes, polyenes, α , β - unsaturated carbonyl compounds and benzenoid systems.

Unit II (7 Hrs)

Infrared Spectroscopy

Principle, the modes of stretching and bending vibrations, bond properties and absorption trends, factors affecting the vibrational frequencies. Finger Print region, Far IR region - Metal- Ligand stretching vibrations, application of IR spectroscopy in differentiation of linkage isomers – cyano and isocyano, nitro and nitrito, thiocyanato and isothiocyanato complexes.

Unit III (8 Hrs)

Proton NMR Spectroscopy

Nuclear spin states, nuclear magnetic moments, absorption of energy, ^1H chemical shift, factors affecting chemical shifts, spin-spin coupling, coupling constant, deuterium exchange, first order and non-first order spectra- a review. Chemical and magnetic equivalence, shift reagents. NMR spectrum of ethanol, acetaldehyde, 1,1,2-trichloroethane, cinnamic acid, ethyl acetate, furfuraldehyde and α -chloro propionic acid

Unit IV (8 Hrs)

Carbon-13 NMR Spectroscopy

^{13}C nucleus, chemical shifts, double resonance techniques - homonuclear and heteronuclear decoupling, broad band decoupling, off resonance decoupling.

2D NMR Spectroscopy

Introduction of 2D techniques: COSY and Hetero - COSY.

ESR Spectroscopy

Theory, derivative curves, 'g' shift, hyperfine splitting, zero field splitting and Kramer's degeneracy, factors affecting the magnitude of the 'g' values. EPR spectra of inorganic compounds.

Unit V (12 Hrs)

Mass Spectrometry

Introduction, principle, ion production (EI, CI, FD and FAB), presentation of spectral data, molecular ions, meta stable ions, molecular ion peak. Nitrogen rule, isotopic abundance analysis. Fragmentation process, symbolism (scission only), even and odd electron ions, scission with rearrangement. Retro Diels Alder rearrangement, McLafferty rearrangement, double bond and/or ring equivalents implied from a formula. Fragmentation associated with functional groups - aliphatic compounds, aldehydes, ketones, carboxylic acids, esters, amides, alcohols, amines and aromatic compounds.

Structural determination of organic compounds using UV-Visible, IR, NMR & Mass spectral data.

IDC - CLINICAL MICROBIOLOGY & BIOCHEMISTRY- MCP19A1 - 60 Hrs
(Offered to M.Sc., Chemistry/ Botany)

Unit I **(12 Hrs)**

Clinical Microbiology

Clinical specimens – collection - needle aspiration, incubation, catheter handling, transport. Isolation of microbes from specimens - selective media, differential media, enrichment media, characteristic media. Identification of microbes (virus, bacteria, fungi and parasites) through morphological and biochemical characteristics.

Unit II **(12Hrs)**

Principles of Clinical Biochemical Analysis

Basis of analysis of body fluids for diagnostic prognostic and monitoring purposes.

Blood Analysis

Composition of blood, blood grouping & matching, physiological function of plasma protein, role of blood as oxygen carrier, blood pressure - hypertension & hypotension, coagulation of blood, anaemia – causes & control .Urea determination - the urease method, estimation of bile pigment in serum, estimation of total protein in serum, estimation of total proteins and albumin based on biuret method and BCG method.

Unit III **(12Hrs)**

Clinical Chemistry

Determination of glucose in serum by Folin & Wu's method, determination of serum cholesterol - Sackett's method for total cholesterol. Diagnostic test for sugar in urine. Test for salt in serum, test for chlorides. Detection of cholesterol in urine, detection of diabetes. Typical reference ranges for biochemical analyst viz, sodium, potassium, urea, creatinum, AST, ALT, AP and cholesterol and their significance. Biological role of sodium, potassium, calcium, iodine, copper and zinc.

Unit IV
(12Hrs)

Electrophoresis, Blotting and Vaccination

Principles, techniques - southern, western and northern blotting. Vaccines and immunizations - active immunization, passive immunization, type of vaccines - whole organism vaccines, purified macromolecules as vaccines, recombinant – vector vaccines, DNA vaccines.

Unit V **(12 Hrs)**

Common Diseases & their Treatments

Insect borne diseases - malaria, filarisis & plague. Air borne diseases - Diphtheria, Whooping cough, Influenza, Measles mumps, Tuberculosis, Water borne diseases - cholera, typhoid, & dysentery. Common disease of the digestive system - jaundice, respiratory system - asthma, nervous system - epilepsy. Some other common diseases -piles, leprosy. First aid for accidents. Common poisons & their antidotes - acid poisoning, alkali poisoning, poisoning by disinfectants hallucinogens.

Toxic effects of metals

Toxicity of iron, copper, arsenic, mercury, lead, cadmium, aluminium & radionuclide & Wilson's disease.

Lecture by chalk and talk, power point presentation, e-content, simulation, numerical exercises, group discussion, assignment, quiz, seminar.

Course Designers:

1. Dr. P. Amutha
2. Dr. G. Subashini

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P1	ORGANIC CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To enable the students to separate two components in an organic mixture, identify the separated components by qualitative tests, determine the boiling point / melting point of components and prepare organic compounds

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	determine boiling point /melting point	K2
CLO2	identify the nature of the organic compounds	K2
CLO3	develop skills in the synthesis of organic compounds	K3
CLO4	separate organic mixtures by solvent extraction	K4
CLO5	analyse the food samples using HPLC	K5

Mapping with Programme Learning Outcomes

S - Strong; M-Medium

ORGANIC CHEMISTRY PRACTICAL I - MCE25P1 - 120 Hrs

1. Qualitative Analysis:

Analysis of two component mixtures – Separation, identification of components and determination of melting point/ boiling point of the components.

2. One stage preparations and purification by recrystallization technique

- (i) m-dinitrobenzene from Nitrobenzene
- (ii) Resacetophenone from Resorcinol
- (iii) Tribromoaniline from Aniline
- (iv) Diazoaminobenzene from Aniline
- (v) Anthranilic acid from Pthalimide
- (vi) Methyl orange from sulphanilic acid

3. Characterization of any two of the above compounds by IR spectra

Note: A minimum of five organic mixtures should be done by each student.

4. Analysis of food samples using HPLC (Group Experiment)

Text Book: LAB MANUAL - Prepared by Faculty, Department of Chemistry, PSGR Krishnammal College for Women

MCE25P2	INORGANIC CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To enable the students to separate the common and rare cations in a mixture, characterize two common and two less familiar cations, estimate quantitatively magnesium, nickel and zinc by complexometry and prepare inorganic complexes

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	identify the common and rare cations	K2
CLO2	estimate the metal ions in complexes	K2
CLO3	interpret IR spectra of metal complexes	K3
CLO4	analyse and report cations in a mixture	K4
CLO5	develop skill in synthesizing inorganic complexes	K5

INORGANIC CHEMISTRY PRACTICAL I - MCE25P2 - 120 Hrs

1. Qualitative Analysis

Qualitative Analysis employing semi micro methods & spot tests of mixtures of common cations & ions of the following less familiar elements - Molybdenum, Thallium, Tungsten, Selenium, Tellurium, Cerium, Thorium, Titanium, Zirconium, Vanadium, Beryllium, Uranium & Lithium.

2. Titrimetry

Complexometric titrations using EDTA - Estimations of Magnesium, Nickel & Zinc.

3. Preparation of Inorganic Complexes

- i. Tris(thiourea)copper (I)chloride
- ii. Potassium tris(oxalato)ferrate(III)
- iii. Hexammine cobalt (III)chloride
- iv. Ammonium hexachlorostannate(IV)
- v. Tetramminecopper (II)sulphate

4. Characterization of any two of the above complexes by IR spectra

5. Preparation of CuO nanoparticles and its characterization using Nano Particle Track Analyzer (Group Experiment)

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P3	PHYSICAL CHEMISTRY PRACTICAL I	PRACTICAL	-	-	120	4

Preamble

To make the students to understand the principle and to carry out the potentiometric titrations, determine the pH and pKa values of buffers and acids, determine the molecular weight of solutes and construct the phase diagram of two components systems.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	set up an electrode to prepare for a potentiometric titration	K1
CLO2	infer the molecular weight of chemical compounds from K_f values by Rast micro method	K2
CLO3	interpret the strength of the solutions and K_a values by potentiometry	K3
CLO4	determine EMF of silver & copper electrode	
CLO5	construct and analyze Phase diagrams	K4

S- Strong; M-Medium

PHYSICAL CHEMISTRY PRACTICAL I - MCE25P3 - 120Hrs

1. Molecular weight determination by Rast Micro Method
2. Phase study: Simple Eutectic System & Compound Formation
3. Determination of Transition Temperature of Salt Hydrate
4. Viscosity: Variation of viscosity of liquids with temperature
5. Electromotive Force:
 - (i) Determination of Standard Potentials (Cu, Ag)
 - (ii) Determination of pH & pKa values using Hydrogen & Quinhydrone electrodes
6. Potentiometric Titrations:

Acid Base titrations

- i. Titration of HCl vs NaOH
- ii. Titration of mixture of acids against a strong base
- iii. Titration of CH_3COOH vs NaOH

Redox titrations

- iv. Titration of Ferrous ammonium sulphate against Potassium dichromate
- v. Titration of Potassium iodide against Potassium permanganate

Precipitation titrations

- vi. Estimation of KI by titration with AgNO_3 using KCl as standard.
- vii. Titration of mixture of halides against AgNO_3 solution

7. Determination of solubility product of a sparingly soluble salt (Concentration Cell & Chemical Cell)

S-Strong; M-Medium

COORDINATION AND ORGANOMETALLIC CHEMISTRY MCE2508 58Hrs

Unit I

(11Hrs)

Coordination Chemistry

Introduction, Bonding in complexes-Valence Bond Theory, Crystal Field Theory- Crystal field effects in tetrahedral, octahedral & square-planar geometry, CFSE - weak & strong field effects, spectrochemical series, magnetic properties of oh, tdl & square planar - Fe (II), Co (II), Ni (II) & Cu (II) complexes, applications of CFSE - stereochemistry of complexes, variation of ionic radii of MX_2 halides, crystal structure of spinels. Molecular Orbital Theory- Based on group theoretical approach, MO diagrams of octahedral complexes with & without pi-bonding.

Unit II

(12Hrs)

Electronic Spectra of Complexes

Characteristics of d-d transitions, selection rules. Energy level diagrams – Orgel diagrams. Sugano –Tanabe diagrams (only for d^2 , d^3 & d^6 ions) - Racha parameter and calculation of inter-electronic repulsion parameter, Jahn-Teller tetrahedral distortions. Spin-orbit coupling. Nephelauxetic effect. Charge transfer transitions - LMCT, MLCT, IPCT, & MMCT.

Mossbauer Spectroscopy: Principle, instrumentation, Applications in the characterization of Fe & Sn complexes

Unit III

(12Hrs)

Reactions of Complexes

Inert and labile complexes- Substitution reactions in octahedral complexes, SN_1CB mechanism, Substitution reactions in square planar complexes - Trans effect - Theories, mechanism and applications, complementary & non-complementary reactions. Oxidation – reduction reactions – through atom & group transfer, electron transfer, Mechanism of electron transfer reactions in solution phase – outer sphere and inner sphere mechanism. Types of stability of metal complexes - Thermodynamic & Kinetic stability, Irving William series of stability constants, methods of the determination of stability constant - Spectrophotometric, Jobs & Bjerrum Method.

Unit IV**(11 Hrs)****Organometallic Chemistry I**

Basics of Organometallic Chemistry - Hapticity - Classification of ligands and its limitations- 18 e – rule, Preparation, Structure, bonding and reactions - Metal carbonyls, Metal alkenes – Zeise salt, Cyclopentadienyl complexes - Ferrocene, Metal-acetylene and Metal-allyl complexes. Concept of Isolobality and Isolobal analogues- ML_5 , ML_4 , ML_3 Fragments- Examples- $Mn(CO)_5$, $Fe(CO)_4$, $Co(CO)_3$.

Unit-V**(12Hrs)****Organometallic Chemistry II**

Organometallic reactions - Co-ordinative unsaturation, oxidative addition reaction, Reductive elimination & β – elimination. Insertion reaction, Hydrogenation of alkenes (Wilkinson catalyst), Hydroformylation (Oxo process), Oxidation of Olefins (Wackers process), Carbonylation of Methanol (Monsanto Process), Polymerization of Olefins (Zeigler –Natta catalysts), Synthetic gasoline - Mobil process, Fischer Tropsch Process. Metal clusters– Introduction to metal carbonyl cluster - Wade's rule. WGS (Water Gas Shift) – Synthesis. Cyclo-oligomerisation of acetylene (Repps and Wilki's Catalyst)

S – Strong ; M-Medium

ORGANIC CHEMISTRY III MCE2509 - 73Hrs
(Chemistry of Natural Products)

Unit I (15Hrs)

Terpenes

Isolation & classification of terpenes. Structural elucidation & synthesis of Zingiberine, Abietic acid, Cadenine, Camphor & β -Amyrin

Unit II (14Hrs)

Steroids

Introduction-structural elucidation & synthesis of ergosterol, vitamin D, cortisol, Male sex hormones – androsterone & testosterone, Female sex hormones - Oestrone, equilenin, Progesterone, cholesterol (structural elucidation only, synthesis not required)

Unit III (15Hrs)

Alkaloids

Introduction-structural elucidation & synthesis of Reticuline, Morphine, Reserpine, Quinine, Atropine, ergotamine

Unit IV (15Hrs)

Nucleic Acids

Structures of RNA & DNA, Structure of nucleosides - bases present - point of linkage of base & sugar - structure of nucleotides - pairing of bases-biological functions of RNA & DNA- genetic continuity- role of RNA in protein synthesis.

Heterocyclic Compounds

Synthesis and reactivity of common heterocyclic compounds containing one or two heteroatoms - (O, N, S) Pyrazole group, Imidazole group, Oxazole group and Thiazole group.

Unit V (14Hrs)

Flavones & Anthocyanins

Structures, synthesis & reactions of Flavones, Isoflavones & Flavanols – Quercetin, Catechin. Anthocyanins - Cyanin chloride, Pelargonin chloride, Delphinin chloride, Peonin chloride, Malvin chloride - Structures & synthesis. Colour reactions of Anthocyanins.

S- Strong; M-Medium

Paper – X Elective I - Physical Chemistry III - MCE2510 - 58 Hrs

(Reaction Kinetics and Electrochemistry)

Unit I

(12Hrs)

Chemical Kinetics

Theories of Reaction Rates

The ARRT - Thermodynamic treatment of ARRT - Significance of reaction coordinate - Application of ARRT - Unimolecular & bimolecular processes - Lindemann Christiansen hypothesis, RRKM theory, Potential energy surface - Kinetic isotopic effects - principles of microscopic reversibility - Steady State Approximation - Third order & termolecular reactions. Primary and secondary salt effects.

Reactions in Solutions

Factors affecting reaction rates in solution - The influence of solvent, ionic strength, dielectric constant, cage effect & pressure on reactions in solutions.

Unit II

(11Hrs)

Catalysis

Acid – base catalysis - specific & general (Bronsted Catalysis law), Enzyme catalysis - Michaelis - Menten equation, effect of pH & temperature on an enzyme catalysed reaction (Single substrate only)

Adsorption

Differences between physisorption & chemisorptions, Theories of adsorption isotherm - Freundlich, Langmuir, BET, Gibb's and Langmuir - Hinshelwood.

Unit III

(11Hrs)

Theories of Electrolytes

Arrhenius theory (Basic idea) - Limitations, Debye - Huckel - Onsager equation - Calculation of A & B, physical significance of k, Tests of Debye-Huckel. Wein effect, Debye - Falkenhagen effect.

Electrode Electrolytic Interface

Electrical double layer, electrocapillary phenomena - electrocapillary curves - Lippman equation, electro kinetic phenomena. Zeta potential and its applications. Measurements of double layer

capacitances. Theoretical models of double layers - Helmholtz model, Gouy Chapmann model - potential of zero charge, Stern model - outer & inner Helmholtz planes

Unit IV

(12Hrs)

Electrode Kinetics

Kinetics of electron transfer, Butler Volmer equation, Tafel equation, transfer coefficients, charge transfer resistance, Multistep process - one electron transfer and two electron transfer.

Irreversibility in Electrochemical Reactions

Overvoltage - Hydrogen overvoltage, oxygen overvoltage, measurement of overvoltage, factors affecting and importances of overvoltage.

Batteries: Types of batteries - secondary batteries - lead-acid battery

Fuel Cells: H₂-O₂ fuel cell

Corrosion: Types, passivation of metals - Pourbaix and Evans diagram

Unit V

(12Hrs)

Electroanalytical Techniques

Polarography: Introduction, apparatus, working, polarographic measurements, interpretation of polarographic waves, equation for polarographic wave, half wave potential, DME - Applications.

Cyclic Voltammetry: Principle, Normal Pulse Voltammetry (NPV), Differential Pulse Voltammetry (DPV)

Elective II – Medicinal Chemistry (Optional) MCE2311 - 58Hrs

Unit I

(11 Hrs)

Introduction to Drugs

Sources, absorption, routes of administration of drugs, biotransformation, mechanism of action. Factors prolonging action, excretion & toxicity. Development of new drugs, procedures followed in drug design, concepts of lead compound & lead modification, concepts of prodrugs & soft drugs, Structure Activity Relationship (SAR), factors affecting bioactivity, resonance, inductive effects, isosterism, bio isosterism, and spatial considerations. Theories of drug activity: Occupancy Theory, Rate Theory, induced fit theory. Quantitative Structure Activity Relationship (QSAR) - History & development. Concepts of drug receptors. Elementary treatment of drug receptor interactions.

Unit II

(12Hrs)

Pharmacokinetics

Introduction to drug absorption, disposition, elimination using pharmacokinetics, important pharmacokinetic parameters in defining drug disposition & in therapeutics. Uses of pharmacokinetics in drug development process.

Pharmacodynamics

Introduction, elementary treatment of enzyme stimulation, enzyme inhibition, sulphonamides, membrane active drugs, drug metabolism, xenobiotics, biotransformation, significance of drug metabolism in medicinal chemistry.

Unit III

(12Hrs)

Antineoplastic Agents

Introduction, classification, cancer chemotherapy, special problems, role of alkylating agents & anti metabolites in treatment of cancer. Carcinolytic antibiotics & mitotic inhibitors. Synthesis of mechlorethamine, cyclophosphamide, melphalan, uracil, mustards & 6- mercaptopurine. Recent developments in cancer chemotherapy. Hormone & Natural products.

Unit IV

(11Hrs)

Cardiovascular Drugs

Introduction - classification of cardiac glycosides, antiarrhythmic drugs, therapeutic uses. Antihypertensive agents, Vasopressor Drugs – Mechanism of Action. Synthesis of

verapamil, methyl dopa

Unit V

(12 Hrs)

Local Anti-infective Drugs

Introduction & general mode of action. Synthesis of sulphonamides, furazolidone, nalidixic acid, ciprofloxacin, norfloxacin, dapson, amino salicylic acid, isoniazide, ethionamide, ethambutal, fluconazole, econazole, griseofulvin, chloroquin & primaquin.

S – Strong ; M-Medium

ORGANIC CHEMISTRY PRACTICAL II MCE25P4 - 60 Hrs

1. Estimations

Estimation of phenol, aniline, glucose & unsaturation.

2. Analysis of Oils

Reichert-Meissel value, Iodine value & Saponification value

3. Separation & Estimation of Active Constituents

TLC separation of drugs in tablet formulation

Spectrophotometric estimation of drugs in tablet formulation

4. Preparations

1,3,5-tribromo benzene

Aspirin

Paracetamol

p-bromo aniline

m-nitro benzoic acid

5. Interpretation of FT-IR for the prepared compounds

Text Book:

LAB MANUAL - prepared by Faculty, Department of Chemistry, PSGR Krishnammal College for Women

Reference Books:

S.No	Authors	Title	Publishers	Year & Edition
1.	F.G. Mann B.C. Saunders	Practical Organic Chemistry	Pearson Education	2009 4 Edn.
2.	G. H. Jeffery, J. Bassett, J. Mendham R. C. Denney	Vogel's Text Book of Quantitative Chemical Analysis	Pearson Education	2009 6 Edn.

Pedagogy: Demonstration and hands on practicals

Course Designers:

1. Dr. N. Muthulakshmi Andal
2. Dr. P. Amutha
3. Dr. Sowmya Ramkumar

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P5	INORGANIC CHEMISTRY PRACTICAL II	PRACTICAL	-	-	60	4

Preamble

To enable the students to analyze quantitatively the metal ions such as Cu, Ni, Zn, Ca and Ba in a mixture estimate ferrous ion, oxalic acid and nitrite by Cerimetry, separate the components in ink and flowers by Chromatography

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	separate and estimate the metal ions in a mixture	K1
CLO2	estimate the inorganic components by Cerimetric method	K2
CLO3	separate the components in natural and commercial products	K3

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6	PLO7
CLO1	S	S	S	S	S	S	S

INORGANIC CHEMISTRY PRACTICAL II MCE25P5 - 60 Hrs

Cerimetry

1. Estimation of Ferrous iron in Ferrous ammonium sulphate
2. Estimation of Oxalic acid
3. Estimation of Nitrite

Estimation of metal ions in a mixture

1. Estimation of Copper & Nickel
2. Estimation of Iron & Nickel
3. Estimation of Copper & Zinc
4. Estimation of Calcium & Barium
5. Estimation of Copper & Barium

Chromatography

Column, Paper & Thin layer: Separation of Components in ink & flowers.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MCE25P6	PHYSICAL CHEMISTRY PRACTICAL II	PRACTICAL	-	-	60	4

Preamble

To enable the students to understand the principle of conductivity experiments and carry out conductometric titrations, determine the rate constant for acid and base hydrolysis of esters and primary salt effect and learn the kinetics of adsorption of oxalic acid on charcoal.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	experiment and estimate the strength of the solutions by conductivity method.	K1
CLO2	experiment and calculate the rate constant for ester hydrolysis and primary salt effect.	K2
CLO3	apply Freundlich isotherm to study the nature of adsorption of oxalic acid on charcoal	K3

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6	PLO7

CLO2	S	S	S	S	S	S	S
CLO3	S	S	S	S	S	S	S

S - Strong; M-Medium

Conductivity Experiments

1. Determination of equivalent conductance of a strong electrolyte & the verification of DHO equation.
2. Verification of Ostwald's Dilution Law & Determination of pK_a of a weak acid
3. Verification of Kohlrausch's Law for weak electrolytes.
4. Determination of solubility of a sparingly soluble salt.
5. Acid-base titration (strong acid vs strong base, weak acid vs strong base)
6. Precipitation titrations (mixture of halides only)
7. Determination of hydrolysis constant of aniline hydrochloride.

Kinetics

1. Acid hydrolysis of an ester at room temperature
2. Saponification of ester at room temperature
3. Evaluation of Arrhenius parameters E & A (any two temperatures only)
4. S₂O₈²⁻- Study on Primary salt effect & determination of concentration of KNO₃

Adsorption

Adsorption of oxalic acid on charcoal & determination of surface area (Freundlich isotherm only)

Spectroscopy and Material Characterization

1. Determination of Optical absorption Characteristics of ZnO Nanoparticles Using a UV Visible Spectrophotometer
2. Determination of Optical Emission Characteristics of ZnO Nanoparticles Using a Fluorescence Spectrophotometer
3. Determination the Band Gap Energy of ZnO Nanoparticles Using a Fluorescence Spectrophotometer

RESEARCH METHODOLOGY MCE22S1

Special Course

Credit - 2

(30 Hrs)

Preamble

- To acquire knowledge about sampling & errors
- To inculcate basic ideas regarding research, thesis writing
- To gain knowledge about the use of tools and software in research

Unit I

(6 Hrs)

Errors involved in Chemical Analysis

Classification, minimization of errors, determination of accuracy of results, reliability of results, rounding numbers -Significant figures - Mean standard deviation.

Unit II

(6 Hrs)

Thesis Writing

Nature and purpose, the components of dissertation, overview, title and title page, abstract, preface and table of contents, introduction, results, discussion, conclusion, experimental section, references and miscellaneous components. Preparation of dissertation

Unit III

(6 Hrs)

Paper Writing

Title, Abstract, Introduction, Materials and Experimental methods, Results and discussion, Conclusion, Acknowledgement, References.

Impact factor, Citation Index, h-Index, Patent filing.

Unit IV

(6 Hrs)

Materials, Tools and Methods in Scientific Writing

Writing techniques – Introduction, word processing and page layout, hardware and operating systems, word processing and page layout software, writing and formatting with computer, becoming accustomed to your system

Unit: V

(6 Hrs)

Research Ethics and Responsible Conduct in Research

The historical and analytical basis of research ethics, responsible conduct in research (Informed Consent, Risk/Benefit Assessment, Honesty in Science: Integrity and Authorship and Conflicts

of Interest, Privacy and Confidentiality), The legal regulation of research ethics in India (From UGC & MHRD), Regulatory requirements relevant to international research.

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
MNM22CS2	CYBER SECURITY II	THEORY	30	-	-	Grade

Preamble

This course provides the classification of cyber security and cyber crime and its laws and data privacy and security in social media

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Understand the basic concepts of Cybersecurity and Cybersecurity threatlandscape.	K2
CLO2	Apply the methods to identify the cyber-attacks and crimes.	K3
CLO3	Analyze the legal framework that exists in India for cybercrime and legal frame work followed by other countries.	K4
CLO4	Estimate the data privacy and security issues related to personal data privacy and security.	K5
CLO5	Create a privacy setting on social media platform and register complaints on a social media platform.	K6

CYBER SECURITY MNM22CS2

Unit I

(6 hrs)

Overview of cyber security: Cyber security terminologies- Cyberspace- Cyber attack- Cyber threats - Cyber terrorism – Cyber warfare.

Unit II

(8 hrs)

Cyber crimes: Cyber Crimes targeting computer system and mobiles- Online scam frauds: emails Scams- Phishing- Vishing- Smishing- Online job fraud- online sextortion- Debit and credit card fraud- Online payment fraud- cyberbullying. Social Media Scam & Frauda: Impersonation- Identify theft -Job scams- Misinformation- Fake new cyber crime against persons -Cyber grooming -Child pornography - cyber stalking-Cyber police station -Crime reporting produce.

Unit III

(4 hrs)

Cyber law: Cyber laws and legal and ethical aspects related to new technologies: AI/ML-IoT- Blockchain- Darknet and social media- Cyber law of other countries.

Unit IV

(5hrs)

Data privacy and Data security: Defining data- Metro-Big data- Non personal data- Data protection- General Data Protection Regulations (GDPR)- 2016 Personal Information Protection and the Electronic document Act(PIPEDA)- Social media Data privacy and Security issues.

Unit V

(7 hrs)

Social Media Platforms and Cyber Security : Case Study on Platform for reporting Cyber Crimes, Checklist for reporting cyber crimes online, Setting privacy settings on social media platforms, Registering complaints on social media platforms, Do's and Don'ts for posting content on social media platforms, prepare password policy for computer and mobile device, security controls for computer and mobile phones , digital Forensics, Cyber Bulling, Phishing, Facebook Attack, Cyber Security audit and Compliance and National Security Policies.
