

PSGR
Krishnammal College for Women

Affiliated to Bharathiar University \ Autonomous \ College of Excellence \ Accredited with A++ Grade \ Ranked 9th in NIRF

Department of B.Sc. Computer Science (Artificial Intelligence)

CHOICE-BASED CREDIT SYSTEM (CBCS)

&

LEARNING OUTCOME BASED CURRICULUM FRAMEWORK (LOCF)

SYLLABUS

B.Sc. Computer Science (Artificial Intelligence)

2024 – 2027 Batch

Programme Learning Outcomes (PLO)

After completion of the Programme, the students will be able to

PLO1: Exhibit technical and technological knowledge in core areas of computer science and Artificial Intelligence.

PLO2: Apply technical, problem solving skills and critical thinking to provide solutions for real world complex problems.

PLO3: Acquire professional proficiency to accomplish employability and entrepreneurship

PLO4: Advance skills to gain global competency and innovate in developing and deploying AI

applications PLO5: Acquire holistic development with strong emphasis on values and ethics

PLO6: Uphold social responsibilities in alignment with their roles

Programme Specific Outcomes (PSO)

The students at the time of graduation will

PSO1: Apply technical skills attained through laboratory exercises, projects, internships and value added programmes to solve multi-disciplinary problems

PSO2: Analyze a problem, identify and define the requirements appropriate to obtain solution

PSO3: Design AI experiments, carry out analysis and interpretation of data, to provide valid conclusions for decision making

PSO4: Adapt to emerging technologies to design and implement solutions for societal needs

PSO5: Create systems by applying modern tools for the complex activities

PSO6: Apply ethical principles and responsibilities in all the activities they involve

PSO7: Function effectively as an individual, and as a member or leader in diverse teams

PSO8: Recognize the need and have the ability to engage in independent and life-long learning in the broadest context of technological changes

B.Sc. Computer Science (Artificial Intelligence)

CHOICE BASED CREDIT SYSTEM (CBCS) & LEARNING OUTCOME BASED

CURRICULUM FRAMEWORK (LOCF)

Curriculum and Scheme of Examination (2024 - 2027 BATCH Onwards)

SEMESTER – I - IV

Semester	Part	Course Code	Title of the Course	Course Type	Instruction Hours/ Week	Contact Hours	Tutorial Hours	Duration of Examination	Examination Marks			Credits

L – Language

AEC – Ability Enhancement Course

SS-Self Study

E – English

GE – Generic Elective

CA - Continuous Assessment

CC- Core Course

ACC – Additional Credit Course

ESE - End Semester Examination,

CA conducted for 25 converted to 15, ESE conducted for 75 converted to 35, * After Class Hours.

QUESTION PAPER PATTERN

CORE & ALLIED PAPERS

CA Question Paper Pattern and distribution of marks UG Core and Allied - (First 3 Units)

Question from each unit comprising of (Semester I to II)

SECTION	MARKS	TOTAL
A – 3 X 2 Marks (No Choice)	06	45
B – 3 X 5 Marks (Internal Choice at the same CLO level)	15	
C - 3 X 8 Marks (Internal Choice at the same CLO level)	24	

End Semester Examination: 5 x 15 = 75 Marks (Semester I to II)

SECTION	WORD LIMIT	MARKS	TOTAL
A - 5 x 2 Marks (No Choice)	One or Two Sentences	10	75
B – 5 x 5 Marks (Internal Choice at same CLO Level)	300	25	
C – 5 x 8 Marks (Internal Choice at same CLO Level)	600-800	40	

WEIGHTAGE ASSIGNED TO VARIOUS COMPONENTS OF CONTINUOUS INTERNAL ASSESSMENT (Semester I - III)

Theory

	CIA Test	Model Exam	Seminar/Assignment/ Quiz	Class Participation	Attendance	Max. Marks
Core / Allied	5	7	5	5	3	25

Practical

	Model Exam	Lab Performance	Regularity in Record Submission	Attendance	Maximum Marks
Core / Allied	10	7	5	3	25

*Departments can plan the above pattern according to their course as Test 1 & 2 - Theory / one theory and one practical / both as practical / one theory or practical with one project.

**RUBRICS Assignment/ Quiz /
Seminar Maximum - 20 Marks**

(converted to 4 marks)

Criteria	4 Marks	3 Marks	2 Marks	1 Mark
Focus Purpose	Clear	Shows awareness	Shows little awareness	No awareness
Main idea	Clearly presents a main idea.	Main idea supported throughout	Vague sense	No main idea
Organization: Overall	Well planned	Good overall organization	There is a sense of organization	No sense of organization
Content	Exceptionally well presented	Well presented	Content is sound	Not good
Style: Details and Examples	Large amounts of specific examples and detailed description	Some use of examples and detailed descriptions	Little use of specific examples and details	No use of examples

CLASS PARTICIPATION

Maximum - 20 Marks (Converted to 5 marks)

Criteria	5 Marks	4 Marks	3 Marks	2 Marks	1 Mark	Points scored
Level of Engagement in Class	Student proactively contributes to class by offering ideas and asks questions more than once per class.	Student proactively contributes to class by offering ideas and asks questions once per class	Student contributes to class and asks questions occasionally	Student rarely contributes to class by offering ideas and asking no questions	Student never contributes to class by offering ideas	
Listening Skills	Student listens when others talk, both in groups and in class. Student incorporates or builds off of the ideas of others.	Student listens when others talk, both in groups and in class.	Student listens when others talk in groups and in class occasionally	Student does not listen when others talk, both in groups and in class.	Student does not listen when others talk, both in groups and in class. Student often interrupts when others speak.	

Behavior	Student almost never displays disruptive behavior during class	Student rarely displays disruptive behavior during class	Student occasionally displays disruptive behavior during class	Student often displays disruptive behavior during class	Student almost always displays disruptive behavior during class	
Preparation	Student is almost always prepared for class with required class materials	Student is usually prepared for class with required class materials	Student is occasionally prepared for class with required class materials	Student is rarely prepared for class with required class materials	Student is almost never prepared for class.

SEMESTER I

Course Number	Course Name	Category	L	T	P	Credit
AI24C01	JAVA PROGRAMMING	Theory	58	2	-	3

PREAMBLE

This course introduces object-oriented programming concepts and also java programming. It covers the concept of loops, arrays, input/output structures, events, exceptions and threads using Java.

PREREQUISITE

Programming Language
Basics of computers

COURSE LEARNING OUTCOMES

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Remember the principles of object-oriented programming, Java language syntax and semantics	K1
CLO2	Understand the concepts of object-oriented programming and java	K2
CLO3	Apply the principles of inheritance, packages and interfaces in simple java applications	K3
CLO4	Analyze the working features of java language	K4

MAPPING WITH PROGRAMME OUTCOMES

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L
CLO2	S	S	S	M	L	L
CLO3	S	S	S	M	L	L
CLO4	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

(11 Hrs.)

Fundamentals of Object-Oriented Programming: Object-Oriented Paradigm, Basic Concepts of Object-Oriented Programming, **Benefits of Object-Oriented Programming, Application of Object-Oriented Programming.** Java Evolution: History, Features, Comparison of Java with C and C++. Java and Internet, Java and World Wide Web, Web Browsers. Overview of Java: Simple Java program, Structure, Java Tokens, Statements, Java Virtual Machine.

UNIT II

(12 Hrs.)

Constants, Variables, Data Types - **Operators and Expressions** – Decision Making and Branching: if, if...Else, nested if, switch, ?: operator. Decision Making and Looping: while, do, for – **Labelled loops.** Classes, objects and methods: Introduction - **Defining a class** - method declaration - **creating objects** - accessing class methods - method overloading - **nesting of methods** – inheritance - overriding methods

UNIT III

(12 Hrs.)

Interfaces: Multiple Inheritance: Introduction - Defining Interfaces - Extending interfaces- implementing interfaces - **Accessing interface variables** – packages - Introduction-using system packages-**java API packages**- creating packages-accessing a package- **multi threaded** – creating Thread- Life cycle of a Thread

UNIT IV

(11 Hrs.)

Exception-Exception handling code- **multiple catch statements**-using finally statements- managing Input and Output files- Introduction – creation of files-Reading /Writing character- Reading/Writing bytes- **Concatenating and Buffering Files** – **Random Access File**

UNIT V

(12 Hrs)

Introduction to Industry 4.0 - Need -Reasons for Adopting Industry 4.0 - Definition- Goals and DesignPrinciples - **Technologies of Industry 4.0** - Skills required for Industry 4.0 - Advancements in Industry 4.0- **Impact of Industry 4.0 on Society, Business, Government and People** - Introduction to 5.0.

1. Mrs Loganayaki. M
2. Mrs K. Geethalakshmi

Course Number	Course Name	Category	L	T	P	Credit
AI24CP1	JAVA PROGRAMMING LAB	Practical	-	-	45	2

PREAMBLE

This course provides hands-on training to implement Object Oriented programming concept using basic syntaxes of control Structures, strings and functions. It demonstrates inheritance, interfaces and packages. It also explores different exception handling mechanisms and concept of multithreading.

PREREQUISITE

Basics of programming Object oriented principles

COURSE LEARNING OUTCOMES

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Identify the logic for the given problem, recognize and understand the syntax and construct JAVA code	K1
CLO2	Understand the java programming constructs and methods	K2
CLO3	Apply OOPs concepts and implement java programs	K3
CLO4	Analyse and implement advanced java programming techniques	K4

MAPPING WITH PROGRAMME LEARNING OUTCOMES

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
PP22C02	COMPUTATIONAL AND ALGORITHMIC THINKING FOR PROBLEM-SOLVING	Theory	45	-	-	3

Preamble

This course aims to kindle young minds to think like computer scientists with the idea that Computing and computers will enable the spread of computational thinking. Computational thinking is thinking recursively, reformulating a seemingly difficult problem into one which we know how to solve, and taking an approach to solving problems, designing systems, and understanding human behaviour that draws on concepts fundamental to computer science.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Define the basic principles of logical reasoning, and problem- solving in computational thinking	K1
CLO2	Understanding the applications of propositional logic, problem representation, and techniques	K2
CLO3	Apply algorithmic thinking to problem-solving using tools	K3
CLO4	Apply and analyze to solve domain-specific problems using computational thinking concepts	K4

Mapping with Programme Learning Outcomes

CLO4	S	S	M	S	S	S

S - Strong; M - Medium; L – Low

SYLLABUS

UNIT I

(7 Hrs)

Basics: Introduction to Computational Thinking- Data Logic - History of Computational Thinking- Applications of Computational Thinking.

UNIT II

(8 Hrs)

Data- Information and Data - Data Encoding - Logic - Boolean logic - Applications of simple Propositional Logic. Tool: Flow Algorithm and Scratch.

UNIT III

(10 Hrs)

Problem-Solving and Algorithmic Thinking: Problem definition- Logical reasoning- Problem decomposition- Abstraction- Problem representation via Algorithmic thinking: Name binding- Selection- Repetition and Control Abstraction- Simple Algorithms – Comparison of performance of Algorithms.

UNIT IV

(8 Hrs)

Activities in Class: Sudoku-Towers of Hanoi- Graph Coloring-Geographical Map reading- Poem Reading-Novel reading- Data analysis on news.

UNIT V

(12 Hrs)

Problem-Solving Techniques- Factoring and Recursion Techniques- Greedy Techniques- Divide and Conquer- Search and Sort Algorithms- Text Processing and Pattern Matching. Tool: iPython.

2. Mrs.S.Kavitha
3. Mrs.V.Bharathi

Evaluation Pattern

Assessment	Number	Marks
Quiz (online or offline)	5	50
Class Activity	5	25
Group Projects (Domain Specific)	1	25
	Total	100

COURSE NUMBER	COURSE NAME	CATEGORY	L	T	P	CREDIT
AP24C03	OPERATING SYSTEMS FUNDAMENTALS – LINUX	Theory	58	2	-	3

Preamble

- This subject is designed to provide the students with a thorough discussion of the fundamentals of operating system.
- To explore the various memory management scheme and to perform administrative task on LINUX servers.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLOs Number	CLO Statement	Knowledge Level
CLO1	Recall the basic concepts with functions of operating systems and Linux system.	K1
CLO2	Understand the operating systems objectives and functionality along with system programs and system calls.	K2
CLO3	Compare and contrast various memory management schemes.	K2
CLO4	Demonstrate deadlock, prevention and avoidance algorithms, storage management, various scheduling algorithms and shell programming.	K3

Mapping with Programme Learning Outcomes

CLO1	M	M	S	S	S
CLO2	S	S	S	S	S
CLO3	S	S	S	S	S
CLO4	S	S	M	S	S

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

(12 Hrs)

Introduction: What is operating systems do - **Computer System Architecture - Operating - System Operations.** Process Management: **Process Concept** - Process Scheduling - Interprocess communication.

UNIT II

(12 Hrs)

Process Scheduling: **Basic Concepts- Preemptive and Nonpreemptive Scheduling** - Scheduling Algorithms (FCFS, SJF & Round Robin only). Synchronization: **Back ground**-The Critical Section Problem-Peterson's Solution- Semaphores- Deadlock: **Deadlock Characterization** - Methods Handling Deadlocks - Recovery from Deadlock.

UNIT III

(11 Hrs)

Memory Management Strategies: **Background-Contiguous Memory Allocation-** Paging. Virtual Memory Management: Demand Paging - Page Replacement - Basic Page Replacement, **FIFO, Page Replacement**, Optimal Page Replacement.

UNIT IV

(11 Hrs)

What Linux Is – Becoming a Linux Power User: About Shells and Terminal Windows- Choosing your shell - **Running Commands** - **Recalling Commands Using Command History** - Connecting and Expanding Commands -Using Shell Variables.

UNIT V

(12 Hrs)

Moving Around the File system: Using Basic File system Commands - Using Meta characters and Operators - **Listing Files and Directories** - Moving, Copying, and Removing Files.

Course Code	Course Name	Course Type	L	T	P	Credits
AI24C04	Python Programming	Theory	58	2	-	4

PREAMBLE

- To Provide advanced programming knowledge in python environment
- To Make interactive Python programs.
- To develop GUI based applications
- To utilize libraries and APIs for rapid application development

PREREQUISITE

Computer Programming

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the technical strengths, Python Interpreter, and program execution.	K1
CLO2	Understand the purpose of operations, strings, lists, and tuples to solve problems	K2
CLO3	Apply functions to solve problems using the procedure-oriented approach	K3
CLO4	Analyze the problems and solve it by applying appropriate logic	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	S	L
CLO2	S	S	M	S	M	L
CLO3	M	S	S	S	S	M
CLO4	S	M	S	S	S	M

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

(10 Hrs)

Introduction: Why do people use Python- Python a scripting language- **Uses of Python- Need of Python Python's Technical Strengths**- How Python runs programs: Introducing the Python Interpreter- Program Execution-Execution Model Variation: Python Implementation Alternatives.

UNIT II

(12 Hrs)

Types & Operations: Numbers Types: Numeric type basics, Numbers in action, Other numeric types Strings Fundamentals: String Basics, String Literals, Strings in action, String Methods – Lists and Dictionaries-Tuples- Files.

UNIT III

(12 Hrs)

Control Flow: Statements & Syntax: Assignment - Expressions & Print- if tests – While & for loops. Functions: Function Basics: Why use functions- Coding Functions- Definition & Calls. Scopes: Python Basics-Global Statement-Scopes Nested functions. Arguments: Arguments passing Basics- Special Arguments Matching Modes.

UNIT IV

(14 Hrs)

Classes & OOP: OOP: Introduction-Class Coding Basics- Class Coding details: Class statement- **Methods - Inheritance.** Designing with classes: Python and OOP-OOP Inheritance, **Composition, Delegation- Methods and Classes act as Objects**-Multiple Inheritance.

UNIT V

(10 Hrs)

Modules & Packages: Introduction to Modules, Importing and Creating Modules, Using Python Standard Library. Exception Handling: Try-Except Blocks, Raising and Catching Exceptions. **File Handling:** Reading and Writing Files, Working with CSV Files. Introduction to Python for Data Processing and Web Applications.

2. Dr. R. Suriyagrace

Course Code	Course Name	Course Type	L	T	P	Credits
AI23C05	DATA STRUCTURES	Theory	58	2	-	3

PREAMBLE

- To define the basic concepts of algorithms and analyze the performance of algorithms.
- To discuss various algorithm design techniques for developing algorithms.
- To analyze various searching, sorting and graph traversal algorithms.
- To discuss various advanced topics on algorithms.

PREREQUISITE

Data structures and Algorithms

COURSE LEARNING OUTCOMES

On successful completion of the course, the students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Remember primitive and non-primitive data structures and their operations	K1
CLO2	Understand the principles and operations of various data structures	K2
CLO3	Apply the techniques and algorithms of data structures in solving simple tasks	K3
CLO4	Analyze data structures algorithms suitable for appropriate applications	K4

MAPPING WITH PROGRAMMING LEARNING OUTCOMES

S- Strong; M-Medium; L-Low

DATA STRUCTURES (AI23C05) – [58 Hrs]

UNIT-I (12 Hrs.)

Introduction and Overview: - Introduction - Basic Terminology: Elementary Data Organization - Data Structures - Data structure operations - Algorithms: Complexity, Time-Space Trade-off. Preliminaries: Algorithmic Notation - **Control Structures, Variables, Data Types. Arrays, Records**, and Pointers: Introduction - Linear Arrays - Representation of Linear Arrays in Memory - Traversing Linear Arrays - Inserting and Deleting.

UNIT-II (11 Hrs.)

Linked Lists: Introduction - Linked Lists - **Representation of Linked Lists in Memory**-Traversing a Linked List – Searching a Linked List- **Memory Allocation-Garbage Collection** – Insertion into a Linked List-Deletion from a Linked List.

UNIT-III (11 Hrs.)

Stack, Queues, Recursion: Introduction – Stacks - Array Representation of Stacks -Linked Representation of Stacks - **Arithmetic Expressions - Polish Notation** - Recursion-**Towers of Hanoi** - Implementation of Recursive Procedures by Stacks – Queues - Linked Representation of Queues – Dequeue - Priority Queues.

UNIT-IV (12 Hrs.)

Trees: Introduction - Binary Trees - Representing Binary Trees in Memory-Traversing binary trees-**Binary search Trees-Searching**-Inserting-Deleting in a Binary Search Trees-Graphs: **Terminology–Sequential Representation of Graphs**-Adjacency Matrix, Path Matrix.

UNIT-V (12 Hrs.)

Sorting and Searching: Introduction – Sorting – Bubble Sort-Insertion Sort - Selection Sort - Merging - **Merge Sort - Radix Sort - Searching and Data Modification** –Searching: Linear Search - Binary Search.

PREAMBLE

- To Provide advanced programming knowledge in python environment
- To Make interactive Python programs.
- To develop GUI based applications
- To utilize libraries and APIs for rapid application development
- To use python as an analytical tool for different mathematical models

PREREQUISITE

Python Programming basics and advanced concepts

GUI Application development

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Identify the basic terminologies of Python programming such as data types, conditional statements, looping statements, and functions.	K1
CLO2	Develop programs with the implementation of operators & I/O operations	K2
CLO3	Construct programs with features of Lists, Strings.	K3
CLO4	Develop readable programs with files for Exception handling concepts.	K4

Mapping with Programming Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	M	S	M	L
CLO2	S	S	S	S	S	M
CLO3	S	S	S	S	M	M
CLO4	S	S	M	S	S	M

S- Strong; M-Medium; L-Low

LIST OF EXERCISES

1. Exercise programs on basic control structures & loops.
2. Exercise programs on operators & I/O operations.
3. Exercise programs on Python Script.
4. Exercise programs on Lists.
5. Exercise programs on Strings.
6. Exercise programs on functions.
7. Exercise programs on recursion & parameter passing techniques.
8. Exercise programs on Tuples.
9. Exercise programs on file.
10. Exercise programs on Exception handling concepts.
11. Exercise programs for packages and modules.

PEDAGOGY

Lectures, Case Studies, Demonstrations

COURSE DESIGNERS

2. Dr. R. Suriyagrace

Course Code	Course Name	Course Type	L	T	P	Credits
AI23CP3	STATISTICAL TOOLS FOR AI	Practical	-	-	45	2

PREAMBLE

- To Understand the fundamental concepts of statistics and their relevance to AI.
- To Develop skills to summarize and visualize data using statistical methods and tools.
- To Learn to apply statistical techniques for model building, evaluation, and validation.
- To Gain a working knowledge of probability theory and how it underpins machine learning algorithms.

PREREQUISITE

Basic statistics

COURSE LEARNING OUTCOMES

On successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the excel operations like pivot tables, scenarios, goal seek, lookup and advanced filters	K1
CLO2	Understand the features of PSPP and the advanced features in excel	K2
CLO3	Apply the descriptive and inferential statistical techniques using PSPP and excel	K3
CLO4	Analyze and interpret various descriptive tests in PSPP to supplement decision making in business scenario	K4

MAPPING WITH PROGRAMME OUTCOMES

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

STATISTICAL TOOLS FOR AI – (AI24CP3) – [45 Hrs]

LIST OF EXERCISES:

1. Exercises to implement measures of statistical analysis using a tool
2. Exercises to implement data exploratory analysis using a tool
3. Exercises to implement correlation analysis using a tool
4. Exercises to implement regression analysis using a tool
5. Exercises to implement T-Test & Chi Square Test
6. Exercises to implement data extraction in advanced excel.
7. Exercises to implement data validation in advanced excel.
8. Exercises to implement goal seek setup & Gantt Chart in advanced excel.
9. Exercises to implement Vlookup & Hlookup and Pivot table chart in advanced excel.
10. Exercises to implement macro & dashboard creation in advanced excel.

SEMESTER III

Course Number	Course Name	Category	L	T	P	Credit
AI23C06	PRINCIPLES OF ARTIFICIAL INTELLIGENCE	Theory	58	2	-	3

Preamble

- This course introduces the concepts of Artificial Intelligence and the various methods of solving problems using Artificial Intelligence.
- It also provides insights into AI techniques and its applications.

Prerequisite

- Principles of Problem-solving
- Discrete Structures

Course Learning Outcomes

On successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the fundamental principles of Artificial Intelligence	K1
CLO2	Understand problem-solving techniques for complex problems	K2
CLO3	Apply AI knowledge for reasoning, planning and decision making	K3
CLO4	Analyse various real-world problems to find suitable solutions	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	M	L
CLO2	S	S	S	S	L	L
CLO3	S	S	S	M	L	L
CLO4	S	S	S	S	L	M

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

(12 hrs)

Artificial Intelligence Introduction – Intelligent Systems – Foundations of AI – Tic-Tac-Toe Game Playing - Problem Solving: State Space Search and Control Strategies – Introduction – General Problem Solving – **Characteristics of Problem - Exhaustive Searches – Heuristic Search Techniques.**

UNIT II

(12 hrs)

Knowledge Representation: Introduction – Approaches to Knowledge Representation – Knowledge Representation Using Semantic Work – Extended Semantic Networks for KR – **Uncertainty Measure: Probability Theory - Bayesian Belief Networks.**

UNIT III

(12 hrs)

Logic and Inferences: Formal Logic – History of Logic and Knowledge – Propositional Logic – First Order Logic – Forward Chaining – Resolution Refutation in FOL – Deductive Retrieval – **Complexity of Resolution Method in FOL – Backward Chaining – Second Order Logic.**

UNIT IV

(11 hrs)

Expert System & Applications: Introduction – Phases in Building Expert Systems – Expert System Architecture – Application of Expert System. Fuzzy Sets and Fuzzy Logic : Introduction – Fuzzy Sets – Fuzzy Set Operations- **Fuzzy Logic-Inference Rules for Fuzzy Propositions.**

UNIT V

(11 hrs)

Natural Language Processing: Basic NLP Techniques – Applications – Natural Language Generation. Machine Learning: Naïve Bayes Classifiers – **Hidden Markov Models – Decision Trees – The K-Means Clustering Algorithm** – Artificial Neural Network.

PREAMBLE

This course provides basic concepts of computer networks and its applications. This course provides an understanding of different components of computer networks, layers, various protocols and their applications.

PREREQUISITES

Computer Hardware and Networking

COURSE LEARNING OUTCOMES

On successful completion of the course, the students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the different building blocks of computer networks and its architecture	K1
CLO2	Understand the fundamental concepts of computer networking, Protocols, architectures and applications.	K2
CLO3	Apply the principles of network architecture in data communication	K3
CLO4	Analyze the protocols available in different layers of computer network architecture	K4

MAPPING WITH PROGRAMME LEARNING OUTCOMES

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6

CLO2.	S	S	S	M	L	L
CLO3.	S	S	S	M	L	L
CLO4.	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

(11 Hrs)

Introduction: Uses of Computer networks - Types of Computer Networks: Broadband Access Networks - Mobile and Wireless Access Networks - Content Provider Network - Transit Network- Network Hardware: PAN, LAN, MAN, WAN, Internetworks. Examples of Networks - Network Protocols - Reference Models: OSI reference model, TCP/IP reference model. - Policy, Legal and Social Issues: Online Speech - Net Neutrality - Security - Privacy - Disinformation.

UNIT II

(12 Hrs)

Physical Layer: Guided Transmission media: Magnetic media, Twisted Pairs, Coaxial Cable, Power Lines, Fiber Optics, Fiber cables. Wireless Transmission: The Electromagnetic Spectrum - Ultra-Wideband Communication. Using the Spectrum for Transmission: Radio Transmission - Microwave Transmission - Infrared Transmission - Light Transmission. The Public Switched Telephone Network: Structure - The Local Loop - Trunks, Multiplexing, Switching. Cellular Networks: Common Concepts - 1G, 2G, 3G, 4G, 5G, GSM.

UNIT III (12 Hrs)

Data Link Layer: Data Link Layer Design Issues - Error Detection and Correction - Elementary Data Link Protocols: Initial Simplifying Assumptions - Basic Transmission and Receipt - Simplex Link-Layer Protocols. The Medium Access Control Sublayer: Multiple Access Protocols - Ethernet - Wireless LANs - Bluetooth Architecture - Data Link Layer Switching.

UNIT IV (12 Hrs)

Network Layer: Network Layer Design Issues - Routing Algorithms in a Single Network: The Optimality Principle - Shortest Path Algorithm - Flooding - Distance Vector Routing. Quality of Services and Applications: Applications QoS Requirement - Packet Scheduling. The Network Layer in the Internet: IP Addresses.

Transport Layer: The Transport Service - Elements of Transport Protocols - Congestion Control - The Internet Transport Protocols: TCP.

UNIT V (11 Hrs)

Application Layer: The Domain Name System (DNS) - Electronic Mail - The World Wide Web (WWW) - Streaming Audio and Video - Content Delivery. Network Security: Fundamentals of Network Security - Firewalls and Intrusion Detection Systems - Cryptography - Symmetric Key Algorithms - Public Key Algorithms - Digital Signatures.

1. Ms. S. Shanthi
2. Dr. R. Suriyagrace

Course Number	Course Name	Category	L	T	P	Credit
AI24CP4	DBMS LAB	Practical	-	-	75	4

Preamble

The lab course provides a way to explore storing and accessing data in a database through query languages and PL/SQL programming language. It enables to learn database functionality on real-time projects.

Course Learning Outcomes

Upon the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Understand basic SQL query statements	K2
CLO2	Gain knowledge of primary and foreign key constraints	K2
CLO3	Apply functions and joins to data	K3
CLO4	Demonstrate PL/SQL programming on databases and differentiate Key/value store databases from a relational database	K4

Mapping with Programme Learning Outcomes

S- Strong; M-Medium; L-Low

LIST OF EXERCISES:

1. A Case study and formulate the problem statement on a specific project.
2. Draw ER Diagrams with entities, attributes, keys, and relationships between entities, and cardinalities.
3. Draw tables with Normalization
4. Perform Data Definition Language statements
5. Perform Data Manipulation Language statements
6. Perform Transaction Control Language and Data Control Language statements
7. Perform Data Integrity Constraints Operations
8. Perform Aggregate Function and Sorting
9. Perform Joins Operations
10. Implement Sub Queries
11. Write PL/SQL program to perform Function
12. Write PL/SQL program to perform Procedure
13. Write a program to perform Triggers in PL/SQL
14. Write a program to perform Cursor operation in PL/SQL

Course Number	Course Name	Category	L	T	P	Credit
CS23SBGP	SKILL-BASED SUBJECT I: GEN AI LAB	Practical	44	1	-	3

Preamble

The objective of this course is to understand the breadth and depth of Generative Artificial Intelligence (Gen AI) and to impart knowledge on its ethical implications, practical applications, and emerging trends.

Course Learning Outcomes

On Completion of the course, the students should be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Understand the fundamental concepts and ethical considerations of Generative AI.	K2
CLO2	Apply AI principles in practical settings using basic AI tools and platforms	K3
CLO3	Develop advanced skills in specialized AI applications such as text analysis, natural language processing, and image recognition.	K3
CLO4	Explore emerging trends in AI, integrating advanced AI tools into diverse professional practices.	K4

Mapping with Programme Learning Outcomes

Syllabus

Unit 1: Introduction to Gen AI

(9 hours)

Understanding Gen AI: Definition and scope of Gen AI - Overview of its applications in various fields - Introduction to essential skills needed for Gen AI. Ethical Considerations: Discussion on ethical guidelines and responsible use of AI - Understanding the impact of AI on society and individuals.

Hands-on Activity: Exploring AI Tools

- Working with appropriate content creation Gen-AI tools to engage with ChatGPT to explore various subjects, simulate interviews, or create imaginative written content.
- Working with appropriate writing and rephrasing Gen-AI tools to drafting essays on designated topics and refining the content with improved clarity, coherence, and correctness.

Unit 2: Basic AI Concepts

(8 hours)

Introduction to AI: Basic concepts and terminology of artificial intelligence - Examples of AI in everyday life - Real-world examples of AI applications in different domains. Machine Learning Basics: Understanding the principles of machine learning - Overview of supervised and unsupervised learning.

Hands-on Activity: Simple AI Projects

- Working with appropriate educational content creation Gen-AI tools to generate quizzes and flash cards based on classroom material.
- Working with appropriate language learning Gen-AI tools to practice and enhance language skills through interactive exercises and games across multiple languages.

Unit 3: AI in Practice

(9 hours)

Text Analysis and Natural Language Processing (NLP): Introduction to NLP concepts and techniques - Hands-on exercises analyzing text data and extracting insights. Image Recognition and Processing: Basics of image recognition algorithms and techniques - AI Tools for Text and Image Processing

Hands-on Activity: Text and Image Projects

- Working with appropriate image processing Gen-AI tools to experiment with AI-generated images.
- Working with appropriate object recognition Gen-AI tools to identify various objects such as text, images, products, plants, animals, artworks, barcodes, and QR codes.

Unit 4: AI for Productivity and Creativity

(9 hours)

AI-enhanced Productivity and creativity Tools: Overview of productivity and creativity tools enhanced with AI capabilities - Tips for integrating AI into daily tasks and workflows. AI and Jobs: Exploring how AI impacts jobs and industries - Discussion on opportunities and challenges - Exploration of AI-powered creative tools and applications.

Hands-on Activity: Productivity and Creativity

- Working with appropriate content creation Gen-AI tools to generate interactive videos / blog posts / art / drawing / music and storytelling experience.
- Working with appropriate resume generation Gen-AI tools to create professional resumes efficiently.

Unit 5: Future of Gen AI and Final Project**(9 hours)**

Emerging Trends in Gen AI - Applications of Generative AI - Ethical and Societal Impact of Gen AI - Future Directions and Challenges - Case Studies in Generative AI.

Hands-on Activity: Trends in Gen AI

- Working with appropriate speech generation Gen-AI tools to customize synthetic speech for virtual assistance across different applications.
- Working with appropriate data analysis Gen-AI tools to perform data analysis, visualization, and predictive modeling tasks.
- Working with appropriate Gen-AI design tools to simplify the creation of visually appealing presentations.
- Working with appropriate website builder Gen-AI tools to develop professional websites with AI assistance.

Pedagogy

Demonstration of AI Tools, Lectures and Case studies.

SEMESTER IV

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
AI23C08	BIG DATA FRAMEWORK	Theory	58	2	-	3

Preamble

- This course introduces big data tools, techniques and Hadoop ecosystem. It also includes the concepts of Map Reduce, PIG, Spark and Hive.

Prerequisites

- Database management systems.
- Data mining

Course Learning Outcomes

On successful completion of the course, the students will be able to

CLO Number	CLO Statement	Knowledge level
CLO1	Recall the big data tools, techniques and Hadoop components	K1
CLO2	Understand the architectures of big data framework in processing big data	K2
CLO3	Apply big data tools and techniques to solve big data problems	K3
CLO4	Analyze various big data models suitable for handling different types of big data	K4

Mapping With Programme Learning Outcomes

CLO4	S	S	S	M	L	L

S- Strong; M-Medium; L-Low.

BIG DATA FRAMEWORK (AI23C08) – [58 Hrs]

UNIT I

(12 Hrs)

Big Data: Big Data Overview, Evolution of Big Data, Definition of Big Data, Challenges with Big Data- State of practice in Analytics, Key roles for new Big Data Ecosystem, Data Analytics Lifecycle overview, discovery, data preparation, model planning, model building, communicate results, operationalize.

UNIT II

(12 Hrs)

HDFS: The design of HDFS, HDFS concepts, HDFS federation, The command line interface-Hadoop file systems. The Hadoop Eco System: Pig, Hive, Hbase, Mahout. Hadoop operations: Setting up a Hadoop cluster- cluster specification, cluster setup and installation- Hadoop configuration.

UNIT III

(12 Hrs)

MapReduce: Introduction- Anatomy of a MapReduce Job Run- Failures- Shuffle and Sort. MapReduce types and formats: Types – Input formats – output formats. MapReduce Features: Counters- Sorting- Joins.

UNIT IV

(11 Hrs)

Spark: Installing Spark – examples –Spark Philosophy - History of Spark - Running Spark- Spark Architecture - Data Frames - Transformations - End to end example –Spark Toolset - Spark run on cluster - Developing spark Applications - Deploying Spark.

UNIT V

(11 Hrs)

Hive: Introduction- Installing Hive – Running Hive- Comparison with traditional databases- HiveQL- Tables - User Defined functions.

DATA MINING (AI23C09) – [43 Hrs]

UNIT I

(8 Hrs)

Introduction: What is data mining? - An essential step in knowledge discovery - Diversity of data types for data mining - Mining various kinds of knowledge - Confluence of multiple disciplines - Data Mining and Applications - Data Mining and Society (Major Issues).

UNIT II

(9 Hrs)

Data, Measurements and Data Preprocessing: Data Types - Statistics of Data: Measuring the Central Tendency and Dispersion of data, Covariance and Correlation - Data Quality, Data Cleaning, and Data Integration - Data Transformation. Pattern Mining: Frequent item sets, closed item sets, and association rules - Frequent itemset mining methods: Apriori algorithm, Pattern-growth approach, mining frequent item sets using the vertical data format.

UNIT III

(9 Hrs)

Classification: What is classification, General approach to classification - Decision Tree Induction Bayes Classification Methods – K-nearest neighbor classifiers - Model Evaluation and Selection: Metrics for evaluating classifier performance, Holdout method and random subsampling, cross validation, Bootstrap - Techniques to improve classification accuracy (Ensemble Methods).

UNIT IV

(9 Hrs)

Cluster Analysis: Cluster Analysis - Partitioning Methods - Hierarchical Methods: Basic concepts of hierarchical clustering, Agglomerative hierarchical clustering, and Divisive hierarchical clustering Density-based methods: DBSCAN, DENCLUE - Evaluation of Clustering.

UNIT V (8 Hrs)

Data Mining trends and research frontiers: Mining rich data types - Data Mining Applications - Case Studies.

Text Book

3	PROBLEM BASED LEARNING	20 %

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
AI23CP5	BIG DATA FRAMEWORK LAB	PRACTICAL	-	-	45	2

Preamble

- This course provides implementation of the Hadoop components like Hive and Spark. This course also provides various exercises to implement the components in the distributed environment through MapReduce programming.

Prerequisite

- Big data framework
- NoSQL concepts

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the components of big data framework, tools and technologies for big data processing	K1
CLO2	Understand the techniques of bid data framework for solving big data problems	K2
CLO3	Apply concepts of big data models and tools to process simple tasks	K3
CLO4	Analyze various big data models suitable for handling different types of big data	K4

Mapping With Programme Learning Outcomes

BIG DATA FRAMEWORK LAB (AI23CP5) – [45 Hrs]

LIST OF EXERCISES:

1. Setting up a Hadoop environment
2. Exercises to implement file management tasks like adding files, retrieving files, deleting files and directories using Hadoop
3. Exercises to implement Map reduce program that mines weather data.
4. Exercises to implement Hive Scripts to create, alter, drop databases, tables, views, functions and indexes.
5. Exercises to implement HiveQL to sort, order, group, distribute and cluster.
6. Exercises to implement partitioning and bucketing in Hive.
7. Exercises to create joins, views and indexes in Hive.
8. Exercises to implement simple processing tasks in Spark
9. Exercises to implement basic operations in Spark SQL

Pedagogy

- Demonstrations

Course Designers

1. Dr. R. Suriyagrace
2. Dr. S. Sakila

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
AI23CP6	DATA MINING LAB	PRACTICAL	-	-	45	2

Preamble

- This lab provides hands on training in implementing data mining techniques using Knime, Weka and Rapid Miner.

Prerequisite

- Programming basics (preferably Python).
- SQL knowledge.
- Statistics fundamentals.

Course Learning Outcomes

On successful completion of the course, the students will be able to

CLO Number	CLO Statement	Knowledge level
CLO1	Recall the data mining functionalities and concepts of machine learning	K1
CLO2	Understand different data mining techniques, algorithms and their usage in real time applications	K2
CLO3	Apply various data mining techniques and algorithms for solving real time problems	K3
CLO4	Analyze classification and clustering models to give solution for complex problems	K4

Mapping With Programme Learning Outcomes

DATA MINING LAB (AI23CP6) – [45 Hrs]

List of Exercises:

1. Exercises to implement data cleaning and normalization techniques
2. Exercises to implement feature extraction and feature selection techniques
3. Exercises on frequent mining patterns
4. Exercises on classification techniques
5. Exercises to implement regression techniques
6. Exercises on clustering techniques
7. Exercises to implement time series data analysis

Pedagogy

- Demonstration, Lecture, Group Discussion

Course Designers

1. Dr S. Meera
2. Ms. M. Loganayaki

COURSE CODE	COURSE TITLE	CATEGORY	L	T	P	CREDIT
AP23A01	DIGITAL MARKETING	THEORY	58	2	-	3

Preamble

- This course provides an overall understanding of the various digital marketing platforms and tools available for creating an effective digital marketing strategy. It provides technical skills to design and develop an integrated digital marketing plan for an organization.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the role of digital marketing in marketing strategy	K1
CLO2	Understand the key elements of a digital marketing strategy	K2
CLO3	Apply the role that social marketing plays in the digital marketing	K3
CLO4	Analyze common digital marketing tools such as SEO and Social media and apply conceptual frame works of digital marketing	K4

Mapping With Programme Learning Outcomes

CLO1	S	M	S	S	S	L
CLO2	S	S	M	S	M	L
CLO3	S	S	S	M	M	L
CLO4	S	S	S	M	S	L

S- Strong; M-Medium; L-Low.

DIGITAL MARKETING (AP23A01) – [58 Hrs]

UNIT – I

(12 Hrs)

Introduction to Digital Marketing: Introduction - Original and Development of Digital Marketing - Internet Users: Penetration and Kind of Internet Use - Digital Marketing strategy – Digital Advertising Marketing Plan - Ethical and legal of framework of Digital Marketing - Skills Required in Digital Marketing - Digital Advertising: Introduction - Concept of display advertising - Digital Metrics. Types of Digital Ad - Targeting in digital marketing - Challenges faced by display marketing.

UNIT – II

(11 Hrs)

Search Engine Advertising: Introduction – Why pay for search advertising? – Understanding Ad Placement – Understanding Ad Ranks – Why is the Ad rank important? – Create your first Ad Campaign – Google Ads Account – Best practices for creating effective Ads - Enhance your Ad Campaign – Performance Reports – E-Commerce

UNIT – III

(12 Hrs)

Facebook Marketing: Introduction – Organic Marketing – Paid Marketing – Facebook Insights LinkedIn: Introduction - LinkedIn Strategy - Content Strategy - LinkedIn Native Videos - LinkedIn Analytics - Asset Copying - LinkedIn Sales Navigator - Emerging Platforms: Instagram

UNIT – IV

(12 Hrs)

Search Engine Optimization: Introduction – Search Engine – The Concept of SEO – SEO Phases – Website Audit – Content – Social Media Reach – Maintenance – Local Search SEO – SEO Visual Search – Voice Change will change the SEO Industry – Sub domains vs Subfolders – Website Navigation - External Links – Pop-ups – Advanced Website Features.

UNIT – V

(11 Hrs)

Mobile Marketing: Introduction – Mobile Advertising – Mobile Marketing Toolkit – Mobile Marketing Features – Mobile Analytics. Digital Analytics: Introduction – Data Collection – Key Metrics – Experience Analysis – Making Web Analytics Actionable – Types of Tracking Code – Competitive Intelligence.

CS23A02	M-COMMERCE	THEORY	58	2	-	3

Preamble

- This course provides an insight on M-Commerce principles and business models. It also explores the concept of mobile commerce technologies, applications, mobile payment methods, security, and ethics.

Course Learning Outcomes

On the successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the fundamental concept of E- commerce and process of business models	K1
CLO2	Understand the architecture and applications of M-Commerce	K2
CLO3	Illustrate the risks, issues, legal and security aspects in M-Commerce	K3
CLO4	Analyze the infrastructure, fraud prevention and payment methodologies and examine the legal and ethical issues in mobile commerce	K4

Mapping with Programme Learning Outcomes

S- Strong; M-Medium; L-Low.

M-COMMERCE (CS23A02) – [58 Hrs]

UNIT – I

(12 Hrs)

Introduction to E- commerce: Introduction - E-commerce - E-business - Categories of E-Commerce applications - Traditional and Electronic commerce - Advantages and disadvantages of E-commerce. Business Models of E-commerce: Introduction - Business models of E-commerce- Business to Consumer (B2C) - Business to Business (B2B) - Difference between B2C and B2B - C2C: Definition - Characteristics and Applications of C2C EC.

UNIT – II (11 Hrs)

Mobile commerce and WAP: Introduction to Mobile commerce - Application - Advantages of M-commerce - Wireless Application Protocol - WAP Browser - Features of WAP 2.0 - Technologies of M- commerce.

UNIT – III (12 Hrs)

Mobile commerce Risk, Security and Payment Methods: Introduction - Security and Payment Methods - Mobile Commerce Security - Security Mechanism - Mobile Security - Network Infrastructure and Security- X - WAP and Security - Mobile commerce payment methods - Mobile payment operations.

UNIT – IV (12 Hrs)

Mobile Money Infrastructure and Fraud Prevention for M- Payment: Introduction - Requirement for authentication infrastructure for M-commerce - Trust relationship - Requirement for Mobile commerce - Password based authentication for mobile users with support for public key technology - M - payment value chain - Life cycle - Operational Issues in M-Commerce payment - Mobile payment systems - General analysis of the payment solutions.

UNIT – V(11 Hrs)

Legal and Ethical Issues: Introduction - Issues related to E- commerce - Legal issues - Taxation and E- commerce - Cyber Laws: Introduction - Cyber laws in India - Salient Provisions of Cyber Law - Contracting and contract Enforcement - IT act 2000.

MACHINE LEARNING (AI24C10)

UNIT I

(11 Hrs.)

Introduction to Machine Learning – Types of Machine Learning Systems: Supervised, Unsupervised, Semi-supervised, Reinforcement Learning. Main Challenges of Machine Learning: Irrelevant Features – Overfitting the Training Data – Underfitting the Training Data. Testing and Validating: Hyperparameter Tuning and Model Selection.

UNIT II

(11 Hrs.)

Python for Machine Learning: Scikit-learn. Essential Libraries and Tools: Jupyter Notebook – NumPy – SciPy - Matplotlib – Pandas. Representing Data and Engineering Features: Feature Scaling – One-Hot Encoding – Automatic Feature Selection.

UNIT III

(12 Hrs.)

Training Models: Linear Regression – Stochastic Gradient Descent – Polynomial Regression – Regularized Linear Models: Ridge Regression and Lasso Regression – Logistic Regression. Support Vector Machines: linear SVM Classification – Nonlinear SVM Classification- SVM Regression. Ensemble Learning and Random Forest: Bagging and Pasting – Random Forests – Boosting Methods.

UNIT IV

(12 Hrs.)

Unsupervised Learning: Types of unsupervised Learning – Challenges in unsupervised Learning. Dimensionality Reduction: PCA. Clustering: Agglomerative hierarchical Clustering – DBSCAN.

UNIT V

(12 Hrs.)

Reinforcement Learning: Learning to Optimize Rewards – Policy Search – Neural Network Policies – Markov Decision Process – Q-Learning – Deep Q-Learning Variants.

DEEP LEARNING (AI24C11)

UNIT I

(11 Hours)

Foundations of Neural Networks and Deep Learning: Neural Networks – Training Neural Networks – Activation Functions – Loss Functions – Hyperparameters.

UNIT II

(11 Hours)

Fundamentals of Deep Networks: Defining Deep Learning – Common Architectural Principles of Deep Networks – Building Blocks of Deep Networks: RBMs – Autoencoders – Variational Autoencoders.

UNIT III

(12 Hours)

Feed-Forward Neural Networks (FNN): Feed-Forward and backpropagation – Weights and Biases – Activation Functions. Multilayer Perceptron (MLP) – Deep Belief Networks (DBN) – Tuning Hyperparameters and advanced FFNNs.

UNIT IV

(12 Hours)

Convolutional Neural Networks (CNN): Main Concepts of CNNs – CNN in Action – CNN Architectures: LeNet5 – AlexNet - Transfer Learning – VGG – Inception V3.

UNIT V

(12 Hours)

Recurrent Neural Networks (RNN): Working Principles of Recurrent Neural Networks (RNN) - LSTM (Long Short-Term Memory) Network. Case Studies: ResNet – YoLo, Generative Adversarial Network (GAN), Gated Recurrent Unit (GRU).

AI23C12	SOFTWARE ENGINEERING	Theory	58	2	-	3

Preamble

This course includes the basic concepts of software engineering to design a high-quality new software project. This course also covers the fundamental techniques of software requirements, analysis and design.

Prerequisite

Database

Course Learning Outcomes

On successful completion of the course, the students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Remember the principles, models and various phases of software engineering	K1
CLO2	Understand the appropriate software architectures and patterns to carry out high-level design of a system and be able to critically compare alternative choices.	K2
CLO3	Apply the design and testing principles to software project development.	K3
CLO4	Analyze the principles to software project development and various processes used in all the phases of the software products	K4

Mapping with Programme Learning Outcomes

SOFTWARE ENGINEERING (AI23C12)

UNIT I

(12 Hrs)

Software and Software Engineering: The Nature of Software –The Software Process-Software Engineering Practice- Process Models: Prescriptive Process Models-Product and Process. Agility and Process –Agile Process – Scrum – Other Agile Frameworks

UNIT II

(12 Hrs)

Understanding Requirements: Requirements Engineering-Establishing the Groundwork- Requirements Gathering - Developing Use Cases-Building the Analysis Model-Negotiating Requirements- Validating Requirements. Requirements Modeling: Requirement Analysis-Scenario-Based Modeling.

UNIT III

(12 Hrs)

Design Concepts: The Design Process –Design Concepts -The Design Model. Architectural Design: Software Architecture Quality Concepts: Software Quality - Achieving Software Quality. Software Quality Assurance: Elements of Software Quality Assurance.

UNIT IV

(11 Hrs)

Software Testing – Component Level: A Strategic Approach to Software Testing- White-Box Testing – Black –Box Testing- Integration Testing- Validation Testing. Product Metrics: Metrics for the Requirements Model-Metrics for Design model – Design metrics for conventional software & object-oriented software.

UNIT V

(11 Hrs)

Risk Management: Software Risks-Risk Identification- Risk Projection - Risk Refinement. Software Maintenance– Maintenance Types- Maintenance Tasks - Reverse Engineering- Software Process Improvement: Approaches to SPI - The SPI Process -SPI Trends.

DEEP LEARNING LAB (AI24CP8)

LIST OF EXERCISES

1. Exercise to implement the Perceptron learning algorithm for binary classification using a logic gate example.
2. Exercise to implement a Neural Network with Backpropagation to solve a nonlinear classification problem using a simple logic gate example.
3. Exercise to visualize different activation functions such as Sigmoid, ReLU, and Tanh using sample input values.
4. Exercise to implement a Feed Forward Neural Network for a simple classification problem using a small dataset.
5. Exercise to implement a Multilayer Perceptron (MLP) for image classification using a standard handwritten digit dataset.
6. Exercise to perform hyperparameter tuning on a Feed Forward Neural Network using a small classification dataset.
7. Exercise to implement a Deep Feed Forward Neural Network for multi-class image classification.
8. Exercise to implement a Convolutional Neural Network (CNN) for disease classification.
9. Exercise to implement a Convolutional Neural Network (CNN) for image classification.
10. Exercise to implement Transfer Learning for image classification using a pretrained convolutional neural network model.
11. Exercise to implement the LeNet-5 architecture for handwritten digit classification.
12. Exercise to implement a Simple Recurrent Neural Network (RNN) for sequence prediction.
13. Exercise to implement a Long Short-Term Memory (LSTM) Network for time-series prediction.
14. Exercise to implement a Generative Adversarial Network (GAN) for image generation.

INTERNET OF THINGS (AI23E01)

UNIT I

(15 Hrs.)

Introduction to IoT: Defining Internet of Things (IoT), Pillars of IoT: M2M, RFID, WSN and SCADA. IoT Strategy: Device, Connect and Manage (DCM) Strategy, Communication Middleware's for IoT.

UNIT II

(15 Hrs.)

Protocol Standardization: IoT Protocol Standardization, Unified Data Standards. IoT Levels & Deployment Templates. Prototyping Embedded Design: Arduino, RaspberryPi.

UNIT III

(14 Hrs.)

Web of Things (WoT): Introducing Web of Things (WoT), Platform Middlewares, Unified Multitier WoT Architecture, WoT Portals and Business Intelligence.

UNIT IV

(14 Hrs.)

Cloud of Things (CoT): Cloud Computing Basic, IoT and Cloud Computing, Mobile Cloud Computing, Cloud of Things Architecture

UNIT V

(15 Hrs.)

Case Study and Real World IoT Applications: Home Automation, Cities, Environment, Energy, Retail, Logistics, Agriculture, Industry, Health and Life Style, Intelligent Transport Systems, Smart Grid, Smart Buildings

2. Dr. R.Suriyagrace

Course Code	Course Title	Category	L	T	P	Credit
AI22E02	ELECTIVE PAPER 2: NATURAL LANGUAGE PROCESSING	Theory	73	2	-	3

Preamble

This course introduces the methods in Natural Language Processing (NLP). This course includes the various algorithms used in NLP. This course also covers various NLP tools and techniques

Prerequisite

1. Data mining
2. Machine Learning

Course Learning Outcomes

On successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the principles and concepts of Natural Language Processing	K1
CLO2	Understand the techniques of text processing	K2
CLO3	Apply NLP methods and tools for real time applications	K3
CLO4	Analyze the issues in text data processing and identifying suitable methods	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L
CLO2	S	S	S	M	L	L
CLO3	S	S	S	M	L	L
CLO4	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

NATURAL LANGUAGE PROCESSING (AI22E02)

UNIT I

(15 Hrs.)

Introduction: Brief History of NLP - Significance of NLP – Early NLP Systems – Role of Knowledge in NLP – Phases of NLP – Evaluation of NLP Processing Systems. Speech Processing – Programming Languages used for NLP. Basic English Concepts: Fundamental Terminologies of English Grammar. Advanced Grammars: Feature Grammars.

UNIT II

(15 Hrs.)

Classical Approaches to NLP: Context – Classical Tool Kit – Text Processing: Introduction – Challenges of Text Processing – Language Dependence – Tokenization – Sentence Segmentation. Lexical Analysis: Introduction – Finite State Morphology – Isomorphism Problems – Contiguity Problems – Paradigm Based Lexical Analysis.

UNIT III

(15 Hrs.)

Syntactic Parsing: Introduction – Context-Free Grammars – Syntax Trees – Other Grammar Formalisms – Basic Concepts in Parsing – The Cocke-Kasami-Younger Algorithm – Handling Unary Rules – Parsing as Deduction - Bottom-Up - Left Corner Parsing – Top-Down Earley Style Parsing – LR Parsing – Constraint Based Grammars - Issues in Parsing.

UNIT IV

(14 Hrs.)

Semantic Analysis: Basic Concepts and Issues in Natural Language Semantics – Theories and Approaches to Semantic Representation – Relational Issues in Lexical Semantics. Fine-Grained Lexical Semantic Analysis – Three Case Studies. Natural Language Generation: Generation Compared to Comprehension – Examples of Generated Texts from Complex to Simple and Back Again – The Linguistic Component – The Cutting Edge.

UNIT V

(14 Hrs.)

Corpus Creation: Corpus Size – Balance, Representativeness and Sampling – Data Capture and Copyright – Corpus Markups and Annotations – Multilingual Corpora – Multimodal Corpora – BioNLP : Basic Domains – Biomedical Text Mining – Case Studies – Tools.

Course Code	Course Title	Category	L	T	P	Credit
AI23SBP1	SBS: DATA VISUALIZATION TOOLS	III	45	-	-	3

Preamble

This course deals with the exercises for visualizing the data using tools Tableau / Power BI

Prerequisite

- MS Excel
- Database management systems

Course Learning Outcomes

On successful completion of the course, students will be able to

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the concepts of data visualization and features of Tableau / Power BI	K1
CLO2	Understand the concepts of exploratory data analysis and visualization in Tableau / Power BI	K2
CLO3	Apply the concepts of exploratory data analysis and data visualization for simple applications	K3
CLO4	Analyze visual presentations of data for effective communication.	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L

DATA VISUALIZATION TOOLS (AI23SBP1)

List of Exercises

1. Exercise to create charts and graphs using Tableau/Power BI.
2. Exercise to implement data filtering and Sorting Data using Tableau/Power BI.
3. Exercise to organize data using groups, relationships and perform slicing using Tableau/Power BI.
4. Exercise to map data to detect geographic variations using Tableau/Power BI.
5. Exercise to customize data using calculations in Tableau/ Power BI (DAX).
6. Exercise to build dashboards to reveal data insights using Tableau/Power BI.
7. Exercise to design user-friendly reports in Power BI.

Course Code	Course Title	Category	L	T	P	Credit
NM21CS1	CYBER SECURITY 1	THEORY	30	-	-	Grade

Preamble

This course introduces fundamental concepts of Cyber Security in the digital era. It provides knowledge of cybercrimes, cyber laws and also the security of digital devices. It helps to do secure digital transactions and safe usage of social media.

SYLLABUS

UNIT I

(6 Hrs)

Principles of Cyber security: Introduction to Cyber security - Defining cyberspace - Architecture of cyberspace - Communication and web technology - Internet infrastructure for data transfer and governance - Regulation of cyberspace - Concept of Cyber security - Issue and challenges of cyber security.

UNIT II

(6 Hrs)

Cyber Crime: Introduction to Cybercrime - Classification of Cyber-crimes – Cyber-crime against women and children – Financial frauds - Social engineering attacks – Malware - Zero day and zero click attacks.

UNIT III

(6 Hrs)

Cyber Law: Cyber Criminals modus-operandi – Reporting of cybercrimes – remedial and mitigation measures – Legal perspective of cybercrime– IT Act 2000 and its amendments – Organization dealing with cybercrimes and cyber security in India.

UNIT IV

(6 Hrs)

Social Media Security: Introduction to social network – Types of social media – Social media platform – Hashtag – Viral content – Security issues related to social media. – **Cyber Security tools:** Nmap – Introduction to Nmap – Nmap scan types- Nmap command list. **Digital Transaction:** Introduction to digital payments – Components of digital payments – Modes of digital payments – Banking cards – UPI (Unified Payment Interface) – e-Wallets.

UNIT V

(6 Hrs)

Digital Devices Security: End point device and Mobile phone security – Password policy – Security patch management – Data backup – Device security policy – Cyber security best practices. Installation and configuration of Computer Anti-Virus. **Case studies:** Illustrations of Financial frauds – Digital Signature. Prepare a checklist for secure net banking.

*e-Content will be provided.

*This course is for all final year students of all streams from 2023-24 onwards.

EVALUATION PATTERN

QUIZ	60 MARKS
CASE STUDY	20 MARKS
POSTER	20 MARKS

Course Code	Course Title	Category	L	T	P	Credit
AI24AC1	ADVANCED LEARNER COURSE 1: PAPER 1: FUNDAMENTALS OF QUANTUM COMPUTING	Theory		-	-	5**

Preamble:

This course introduces key concepts such as qubits and basic algorithms, enabling students to understand how quantum computers operate and their potential applications.

Prerequisite

Basic knowledge of mathematics

Fundamental concepts of computer science.

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO Number	CLO Statement	Knowledge Level
CLO1	Recall the fundamental concepts of quantum computing such as qubits, superposition.	K1
CLO2	Understand the differences between classical and quantum computing models	K2
CLO3	Apply basic quantum gates and circuits to solve simple problems.	K3
CLO4	Analyze simple quantum algorithms and their applications.	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L
CLO2	S	S	S	M	L	L
CLO3	S	S	S	M	L	L
CLO4	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

Introduction of Quantum Computing? – Classical vs quantum computing – Limitations of classical computers – Basics of Quantum Mechanics – Quantum states and wave function – Superposition principle – Measurement postulate – Dirac notation– Quantum computing applications.

UNIT II

Qubits vs classical bits – Representation of qubits – Bloch sphere representation – Single qubit systems – Multi-qubit systems – Tensor product – Quantum Entanglement – Bell states – Measurement of quantum systems – Probability amplitudes.

UNIT III

Quantum logic gates – Pauli gates – Hadamard gate – Phase gate – Rotation gates – Controlled gates – Quantum circuit model – Circuit representation – Reversible computation – Design of simple quantum circuits.

UNIT IV

Introduction to quantum algorithms – Deutsch–Jozsa Algorithm – Grover’s Algorithm – Shor’s Algorithm – Quantum Fourier Transform – Speedup over classical algorithms.

UNIT V

Quantum cryptography – Quantum key distribution – Quantum error correction – Noise and decoherence – Physical implementations – Limitations of quantum computing – Future scope – Case studies.

Course Code	Course Title	Category	L	T	P	Credit
AI21AC2	ADVANCED LEARNER COURSE 1: PAPER 2: BUSINESS INTELLIGENCE	Theory		-	-	5**

Preamble:

This course introduces the technical components in Business Intelligence. It also includes web analytic business concepts, data warehouses, operational business intelligence, and applications of data mining in business.

Pre-requisite

- Database Management Systems
- Data Mining

Course Learning Outcomes

On successful completion of this course, students should be able to:

CLO Number	CLO Statement	Knowledge Level
CLO1	Remember the function, process, services and tools of BI	K1
CLO2	Understand the knowledge management principles and its architecture, approaches, tools and models	K2
CLO3	Apply business intelligence knowledge to manage BI projects in different domains	K3
CLO4	Analyze the marketing activities with marketing concepts and explore the Knowledge in business intelligence	K4

Mapping with Programme Learning Outcomes

CLOs	PLO1	PLO2	PLO3	PLO4	PLO5	PLO6
CLO1	S	S	S	M	L	L
CLO2	S	S	S	M	L	L
CLO3	S	S	S	M	L	L
CLO4	S	S	S	M	L	L

S- Strong; M-Medium; L-Low

SYLLABUS

UNIT I

Components of the decision-making process: Business intelligence - Effective and timely decisions, Data, information and knowledge, Role of mathematical models, Business intelligence architectures, Ethics and business intelligence. Decision support systems - Definition of system, Representation of the decision-making process, Evolution of information systems, Definition of decision support system, Development of a decision support system.

UNIT II

Business Intelligence and Information Exploitation – Need for Business Intelligence, Information Asset, Exploiting Information, Business Intelligence and Program Success, Actionable Knowledge. Value of Business Intelligence - Information Asset and Data Valuation, Actionable Knowledge-Return on Investment, Business Intelligence Applications, Intelligence Dashboard, business Intelligence adds Value. Planning for Success - Initiating a Program, Business/Information Technology Partnership, Business Intelligence Success Factors, Team Building, Strategic versus Tactical Planning.

UNIT III

Business Intelligence Environment - Business Case, Business Intelligence Process, System Infrastructure, Information Access, Delivery, and Analysis, Services, Management Issues. Business Models and Information Flow - Business Case, Information Processing and Information Flow, Information Flow Model, Usage in Practice, Modeling Frameworks, Management Issues.

UNIT IV

Data Warehouses, Online Analytical Processing, and Metadata - Business Case, Data Models, Data Warehouse, Data Mart, Online Analytical Processing, Metadata, Management Issues. Business Rules - Business Case, Business Rules Approach, Business Rule, Business Rule System, Sources of Business Rules, Management Issues.

UNIT V

Business intelligence applications: Marketing models - Relational marketing, Salesforce management, Business case studies. Logistic and production models: Supply chain optimization, Optimization models for logistics planning, Revenue management systems, Business case studies.
