

# DEPARTMENT OF MATHEMATICS(PG) 

CHOICE BASED CREDIT SYSTEM \& OUTCOME BASED EDUCATION SYLLABUS

## PSGR Krishnammal College for Women

## PROGRAMME OUTCOMES - PG

After completion of the programme, the student will be able to
PO1 : Students acquire sound analytical and practical knowledge to formulate and solve challenging problems.

PO2 : Students will be able to read and identify mathematical and computational methods in order to solve comprehensive problems.

PO3 : Students are well prepared to take jobs in schools and colleges as Mathematic Teachers and Professors, Software Industries, Research and Development Organizations.

PO4 : Students to purse higher studies in Mathematical and Computing Sciences and to clear Competitive exams like SET/ NET/ TET etc.

PO5 : Students to learn and apply Mathematics in real life situations aiming at service to the society.

## PROGRAMME SPECIFIC OUTCOMES

The students at the time of graduation will
PSO1 : Provide Strong foundation and inculcate ample knowledge on topics in pure and applied mathematics, empowering the students to pursue higher degrees at reputed academic institutions.

PSO2 : Advanced mathematical topics provide opportunities to research students for communication and discussion.

PSO3 : Demonstrate the highest standard of ethics in research.
PSO4 : Provide scope for interaction with international researchers and developing collaborations.

PSO5 : Provide knowledge of a wide range of mathematical techniques and application of mathematical methods/tools in other scientific and engineering domains.

PSO6 : Nurture problem solving skills, thinking, creativity through assignments, project work.

# DEPARTMENT OF MATHEMATICS(PG) <br> CHOICE BASED CREDIT SYSTEM \& OUTCOME BASED EDUCATION SYLLABUS \& SCHEME OF EXAMINATION <br> MASTER OF MATHEMATICS <br> 2020-2021 

## CA I \& II :

| Bloom's Category | Section | Marks |  | Total |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{\|l} \hline \text { Remember } \\ \text {,Understand } \\ \left(K_{1}, K_{2}\right) \\ \hline \end{array}$ | A - 5x2 marks (No Choice) | 10 | 1 or 2 sentences | 50 |
| $\begin{aligned} & \text { Apply , Analyse } \\ & \left(\mathbf{K}_{3}, \mathbf{K}_{4}\right) \end{aligned}$ | B-4 x 5 marks (No Choice) | 20 | 250 words |  |
| Evaluate, Create $\left(\mathbf{K}_{5}, \mathbf{K}_{6}\right)$ | C-2 out of 3 (2x 10 marks) | 20 | 500 words |  |

End Semester Examination

| Bloom's <br> Category | Section | Marks |  | Total |
| :---: | :---: | :---: | :---: | :---: |
| Remember ,Understand ( $\mathbf{K}_{1}, \mathbf{K}_{2}$ ) | $\begin{aligned} & \text { A - } 11 \text { out of } 13 \\ & (11 \times 2 \text { marks }) \end{aligned}$ | 22 | 1 or 2 sentences | 100 |
| $\begin{aligned} & \text { Apply, Analyse } \\ & \left(\mathbf{K}_{3}, \mathbf{K}_{4}\right) \end{aligned}$ | B - 5 out of 7(6 x5 marks ) | 30 | 300 words |  |
| Analyse, Evaluate, Create ( $\mathbf{K}_{4}, \mathbf{K}_{5}$, $\mathrm{K}_{6}$ ) | C-4 out of 5, 6 compulsory ( $4 \times 12$ marks) | 48 | 800 words |  |

Question paper pattern for ALC-CA

| Bloom's <br> Category | Section | Marks |  | Total |
| :--- | :--- | :--- | :--- | :---: |
| Apply, Analyse <br> $\left(K_{3}, K_{4}\right)$ | A-4 out of 6(4 x 4 marks) | $\mathbf{1 6}$ | $\mathbf{2 5 0}$ words |  |
| Analyse, <br> Evaluate( $\left.K_{4}, K_{5}\right)$ | B - 1 out of 2(1 x 9 marks) | $\mathbf{9}$ | $\mathbf{5 0 0}$ words |  |

Model and End Semester Examination

| Bloom's <br> Category | Section | Marks |  | Total |
| :---: | :---: | :---: | :---: | :---: |
| Apply, Analyse $\left(\mathbf{K}_{3}, \mathbf{K}_{4}\right)$ | A - 5 out of 8 (1x 5 marks) (Open Choice) | 25 | 250 words | 75 |
| Analyse, Evaluate $\left(\mathbf{K}_{4}, \mathbf{K}_{5}\right)$ | $\begin{aligned} & \text { B-5 out of 8(5 x } 10 \text { marks) } \\ & \text { (Open Choice) } \end{aligned}$ | 50 | 500 words |  |

## WEIGHTAGE ASSIGNED TO VARIOUS COMPONENTS OF CONTINUOUS INTERNAL ASSESSMENT

Theory

## External Assessment : 80 Marks

| Mode of Evaluation | Marks | Total |
| :--- | :---: | :---: |
| Project Report |  |  |
| Relevance of the topic to academic / society | 10 | 60 |
| Objectives | 10 |  |
| Experimental Design | 20 |  |
| Expression of Results and Discussion | 20 |  |
|  |  |  |
| Presentation | 10 | 20 |
| Discussion | 10 |  |

## QUIZ

## Maximum - 20 Marks (converted to 4 marks)

## RUBRICS

## Assignment/ Seminar

Maximum - 20 Marks (converted to 4 marks)

| Criteria | 4 Marks | 3 Marks | 2 Marks | 1 Mark |
| :--- | :--- | :--- | :--- | :--- |
| Focus <br> Purpose | Clear | Shows awareness | Shows little <br> awareness | No awareness |
| Main idea | Clearly presents <br> a main idea. | Main idea <br> supported <br> throughout | Vague sense | No main idea |
| Organisation: <br> Overall | Well planned | Good overall <br> organization | There is a sense <br> of organization | No sense of <br> organization |
| Content | Exceptionally <br> well presented | Well presented | Content is sound | Not good |
| Style: <br> Details and <br> Examples | Large amounts of <br> specific <br> examples and <br> detailed | Some use of <br> examples and <br> detailed <br> description | Little use of <br> specific <br> examples and <br> details | No use of <br> examples |

## CLASS PARTICIPATION

## Maximum - 20 Marks (converted to 5 marks) - Scaled from 5 to 1

| Criteria | 5 Marks | 4 Marks | 3 Marks | 2 Marks | 1 Mark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Level of Engagementin Class | Student proactively contributesto class by offering ideas and asks questions more than once per class. | Student proactively contributesto class by offering ideas and asks questions once per class | Student contributes to class and asks questions occasionally | Student rarely contributeto class by offering ideas and asking no questions | Student never contributes to class by offering ideas |
| Listening Skills | Student listens whenothers talk, both in groups and in class. <br> Student incorporatesor builds offof the ideas of others. | Student listens when others talk, both in groups andin class. | Student listens whenothers talk in groups and in class occasionally | Student does not listen whenothers talk,both in groups andin class. | Student does not listen whenothers talk,both in groups andin class. <br> Student often interrupts when others speak. |
| Behavior | Student almost neverdisplays disruptive behavior during class | Student rarely displays disruptive behavior during class | Student occasionally displays disruptive behavior during class | Student often displays disruptive behavior during class | Student almost always displays disruptive behavior during class |
| Preparation | Student is almost always prepared for class with required class materials | Student is usually prepared for class with required class materials | Student is occasionally prepared for class with required class materials | Student is rarely prepared for class with required class materials | Student is almost never prepared for class. |

## Preamble

To develop the capability among students for handling abstract concepts and to provide the students with experience in axiomatic mathematics while keeping in close touch with the computational aspects of the subject.
To prepare students to understand principles, concepts necessary to formulate, solve and analyze Algebra
To prepare the students for further courses in higher mathematics and related disciplines

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :--- |
| $\mathrm{CO1}$ | onstrate competence with the basic ideas of algebra including the concepts of direct <br> products, finitely generated abelian groups | K 2 |
| CO 2 | onstrate knowledge of the structures of fields ,extension fields and finite fields | K 3 |
| CO 3 | eciate the significance Sylow's theorem and Galois theory | K 4 |
| CO 4 | pose clear and accurate proofs using the concepts of Algebra | K 5 |
| CO 5 | Demonstrate competence with the basic ideas of linear Algebra including the <br> concepts of modules and linear transformations | K 6 |

S- Strong; M-Medium; L-Low

## CORE I - SEMESTER I - ALGEBRA (MTH2001)

## Unit I

Group Theory: Another Counting principle - Sylow's theorem - Application of Sylow's theorem - Direct products - Finite abelian Group.

Unit II
( 18 hrs )
Vector spaces and modules: elementary basic concepts - linear independence and bases - dual spaces - inner product spaces - modules

## Unit III

Fields: Extension Fields - Roots of Polynomials - More about root-Elements of Galois Theory - Solvability by radicals -Finite fields

## Unit IV

Linear Transformation: The algebra of linear transformations - Characteristic roots - Matrices - Canonical Forms -Triangular Form - Nilpotent Transformation

## Unit $V$

( 17 hrs )
Canonical Forms: A Decomposition of V: Jordan form - Rational Canonical Form- Trace and Transpose Determinants - Hermitian - Unitary and Normal transformations -Real quadratic forms.

Preamble
To present students the elements and importance of the real analysis.
$>$ To define and recognize the basic properties of the field of real numbers.
$>$ To enable the students to the differentiability of real functions and its related theorems.

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Describe fundamental properties of the real numbers that lead to the formal <br> development of real analysis | K2 |
| CO2 | Comprehend rigorous arguments developing the theory underpinning real analysis | K3 |
| CO3 | Demonstrate an understanding of limits and how they are used in sequences, series, <br> differentiation and integration | K4 |
| CO4 | Construct various mathematical proofs of basic results in real analysis | K5 |
| CO5 | Appreciate how abstract ideas and various methods in mathematical analysis can be <br> applied to important practical problems. Exhibits rigorous mathematical proofs in <br> real analysis like inverse function theorem and the implicit function theorem | K6 |

## Syllabus

## CORE II - SEMESTER I - REAL ANALYSIS (MTH2002)

## Unit I

Riemann Stieltjes Integral: Definition and Existence of the integral - Properties of the integral Integration and differentiation - Integration of vector valued function - Rectifiable curves.

Unit II
( $\mathbf{1 8} \mathrm{Hrs}$ )
Uniform convergence and Continuity - Uniform convergence and Integration - Uniform convergence and Differentiation - Equi continuous Families of Functions-The Stone-Weierstrass theorem Unit III

Power Series - The Exponential and Logarithmic Functions - The Trigonometric Functions - The Algebraic completeness of the complex field- Fourier series- The Gamma Functions. Unit IV (16 Hrs)

Functions of Several Variables - Linear Transformation - Differentiation - The Contraction Principle. The inverse function Theorem

## Unit $V$

(16Hrs)
The implicit Function Theorem-The Rank theorem-Determinants-Derivatives of higher orderDifferentiation of Integrals

## Preamble

$>$ Differential equations arise for many problems in oscillations of mechanical and electrical systems > It plays a very important role in all modern scientific and engineering studies.

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :--- |
| CO1. | Solve a variety of first order differential equations selecting from a variety of <br> techniques | K2 |
| CO2. | Solve a variety of second order differential equations, selecting from several <br> techniques | K2 |
| CO3. | Give series solutions (and approximations) for second order linear differential <br> equations, both at ordinary points and at regular singular points | K3 |
| CO4. | Understand and be able to use various theoretical ideas and results that underlie the <br> mathematics in this course covered in the syllabus (including various <br> existence/uniqueness results, ideas of linear independence and the Wronskian, and <br> convergence properties of Fourier series). | K5 |
| CO5. | Construct and apply symbolic and graphical representations of functions | K6 |

S- Strong; M-Medium; L-Low

Syllabus
CORE III - SEMESTER I - ORDINARY DIFFERENTIAL EQUATIONS (MTH2003) Unit I

Second order linear equations with ordinary points - Legendre equation and Legendre polynomials Second order equations with regular singular points - Bessel equation.

## Unit II

( 16 hrs )
Systems of first order equation - Existence and uniqueness theorem - Fundamental matrix.

## Unit III

Non-homogeneous linear systems - Linear systems with constant co-efficient Linear systems with periodic co-efficients .

## Unit IV

( 18 hrs )
Successive approximation - Picard's theorem - non-uniqueness of solutions - continuation and dependence on initial conditions - Existence of solutions in the large - existence and uniqueness of solutions of systems.

## Unit V

Fundamental results - Sturm's comparison theorem - Elementary linear oscillations- Comparison theorem of Hille-Winter oscillations of $\mathrm{X} "+\mathrm{A}(\mathrm{t}) \mathrm{X}=0$. Elementary non-linear oscillations.

## Syllabus

CORE IV - SEMESTER I - MATHEMATICAL STATISTICS (MTH2004)
Unit I
(16 Hrs)
Limit Theorems: Preliminary remarks-Stochastic convergence-Bernoulli's law of large numbers- The convergence of a sequence of distribution functions - Levy Cramer theorem - De-Moivre Laplace theorem Lindberg Levy theorem-Lapunov theorem.

## Unit II

( 17 Hrs )
Markov chains: Preliminary remarks-Homogeneous Markov chains-The transition matrix-The Ergodic theorem- Random variables forming a homogenous Markov chain.

## Unit III

(19 Hrs)
Stochastic process: The notion of a stochastic process-Markov process and processes with independent increments-The Poisson process-The Furry-Yule process-Birth and death process- The Polya processKolmogorov equations.

## Unit IV

(17 Hrs)
Sample moments and their functions - The notion of the sample - The notion of a statistic - The distribution of the arithmetic mean of independent normally distributed random variables - The chi square distribution - The distribution of the statistic (X, S) - Student's $t$ distribution - Significance tests - The concept of a statistical test - Parametric tests for small samples - Parametric tests for large samples - The chi square test- Independence test by contingency tables.

## Unit $V$

(17 Hrs)
Theory of estimation - Preliminary notions - Consistent - unbiased - sufficient and efficient estimates - asymptotically most efficient estimates - methods of finding estimates - Confidence intervals Theory of hypothesis testing .

## Syllabus

## ELECTIVE I - SEMESTER I - FINANICAL MATHEMATICS (MTH20E1)

Unit I
Single period models : Some definitions from finance - Pricing a forward -The one-step binary model-A ternary model - A characterisation of no arbitrage - The risk-neutral probability measure.

## Unit II

(17 Hrs)
Binomial trees and discrete parameter martingales: The multiperiod binary model-American options - Discrete parameter martingales and Markov processes - Some important martingale theorems The Binomial Representation Theorem - Overture to continuous models.

## Unit III

( 17 Hrs )
Brownian motion :Definition of the process - Levy's construction of Brownian motion - The reflection principle and scaling - Martingales in continuous time.

## Unit IV

(17 Hrs)
Stochastic calculus: Stock prices are not differentiable - Stochastic integration - Ito’s formula -
Integration by parts and a stochastic Fubini Theorem - The Girsanov Theorem -The Brownian
Martingale Representation Theorem - Why geometric Brownian motion- The Feynman-Kac representation.

## Unit V

The Black-Scholes model - The basic Black-Scholes model-Black-Scholes price and hedge for European options - Foreign exchange -Dividends -Bonds - Market price of risk.

# ELECTIVE II - SEMESTER I - GRAPH THEORY (MTH20E2) 

Unit I
Graphs, Subgraphs : Graphs and Simple Graphs - Graph Isomorphism - The Incidence and Adjacency Matrices - Subgraphs - Vertex Degrees - Paths and Connection Cycles.

Trees:Trees- Cut Edges and Bonds - Cut Vertices - Cayley's Formula.

## Unit II

 (16 hrs)Connectivity, Euler Tours And Hamilton Cycles: Connectivity - Blocks- Euler tours - Hamilton cycles.

## Unit III

(18 hrs)
Matchings : Matchings - Matchings Coverings in Bipartite Graphs - Perfect Matching
Edge Colourings: Edge Chromatic Number - Vizing's Theorem.

## Unit IV

( 18 hrs )
Independent Sets, Cliques: Independent Sets- Ramsey's Theorem
Vertex Colourings: Chromatic Number - Brook's Theorem - Hajos Conjecture - Chromatic Polynomials - Girth and Chromatic Number.

## Unit V

( 18 hrs )
Planar Graphs: Plane and Planar Graphs - Dual Graphs - Euler's Formula- Bridges - Kuratowski's Theorem (Proof Omitted) - The Five Colour Theorem and The Four Colour Conjecture - Non hamiltonian Planar Graphs

Directed Graphs: Directed Graphs - Directed Paths - Directed Cycles.

## Syllabus

## CORE V - SEMESTER II - NUMBER THEORY (MTH2005)

## Unit-I

(13 Hrs)
Residue classes, Linear Congruences with applications, Fermat's theorem, Euler's theorem, Chinese Remainder theorem, Wilson's theorem, the order of an integer modulo $n$ and existence of primitive roots.

## Unit-II

Quadratic congruences, quadratic residues and nonresidues, Euler's criterion, The Legendre symbol and its properties, quadratic reciprocity, Gauss's Lemma, Jacobian symbol and its properties with applications.

## Unit-III

( 16 Hrs )
Perfect numbers, the group of arithmetic functions, Mobius inversion formula with applications, Fermat numbers and Mersenne numbers.

Finite and infinite simple continued fractions, rational approximations of real numbers

## Unit-IV

Diophantine linear equations, Pythagorean triples, Gaussian integers, primes as sum of squares the case $\mathrm{n}=4$ in Fermat's Last theorem, Pell's equation continued fraction solution of Pell's equation.

## Unit-V

(14 Hrs)
Analytic Number Theory- Sum of reciprocals of primes-order of growth of function-Chebyshev's theorem- Bertrand's postulate- the prime number theorem- the Zeta function and Riemann hypothesis

| S. No | Author | Title of the book | Publishers | Year of Publication |

| NUMBER <br> MTH2006 | LEBESGUE MEASURE THEORY | THEORY | 71 | $\mathbf{4}$ | - | $\mathbf{4}$ |

## Preamble

$>$ To introduce the concepts of measure and integral with respect to a measure, to show their basic properties, and to provide a basis for further studies in Analysis, Probability, and Dynamical Systems. To gain understanding of the abstract measure theory and definition and main properties of the integral.
To construct Lebesgue's measure on the real line and in $n$-dimensional Euclidean space. To explain the basic advanced directions of the theory.

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO1 | Describes the basics axioms for the real numbers, natural and rational numbers as <br> subset. Demonstrate the basic concepts underlying the definition of the general <br> Lebesgue integral. | K 2 |
| CO 2 | Derives the concepts of Borel sets, measurable functions, differentiation of <br> monotone functions | K 3 |
| CO 3 | Analyse about the little wood's theorem, integral of a non-negative function, <br> functions of bounded variation | K 4 |
| CO 4 | Construct a clear idea about convergence in measure, differentiation of an integral, <br> absolute continuity and convex functions | K 5 |
| CO5 | Apply the theory of the course to solve a variety of problems at an appropriate level <br> of difficulty | K 6 |

## Syllabus

## CORE VI - SEMESTER II - LEBESGUE MEASURE THEORY (MTH2006)

## Unit I

The Real number system: Axioms for the real numbers- The natural and rational numbers as subset of R-The extended real numbers-Sequence of real numbers-open and closed sets of real numbers-continuous functions-Borel sets.

## Unit II

(14Hrs)
Lebesgue Measure: Outer measure - Measurable sets and Lebesgue measure - Measurable functions The Little wood's theorem.

## Unit III

(15Hrs)
The Lebesgue Integral: The Lebesgue integral of a bounded function over a set of finite measure Integral of a non-negative function - General Lebesgue integral - Convergence in measure.

## Unit IV

(14 Hrs)
Differentiation and Integration: Differentiation of monotone functions-Functions of bounded variation-Differentiation of an integral - Absolute continuity-Convex functions

## Unit $V$

( 14 Hrs )
The classical banach spaces: the $L^{p}$ spaces- The Minkowski and holder inequalities-Convergence and completeness-Approximation in $L^{p}$.

## Syllabus

## CORE VII - SEMESTER II - PARTIAL DIFFERENTIAL EQUATIONS (MTH2007)

 Unit INonlinear Partial Differential Equations of the first order - Cauchy's method of Characteristics Compatible System of First order equations- Charpit's method - Special types of First Order equations Jacobi's method.

## Unit II

Partial Differential Equations of second order - The origin of Second-order Equations - Linear Partial Differential Equations with constant coefficients - Equations with variable coefficients

## Unit III

( 14 Hrs )
The solution of Linear Hyperbolic Equations - Separation of variables - The Method of integral transforms - Non linear Equation of the second order.

## Unit IV

( 14 Hrs )
Laplace's equation - The occurrence of Laplace's Equation in Physics - Elementary solution of Laplace's Equation - Families of Equipotential surfaces - Boundary value problems - Separation of variables Problems with axial symmetry.

## Unit $V$

( 14 Hrs )
The wave Equation -The occurrence of wave equation in physics - Elementary solution of the onedimensional wave equation - Vibrating Membranes: Application of the calculus of variations -Three dimensional problems. The diffusion equations: Elementary solutions of the diffusion Equation - Separation of variables - the use of Integral transforms.

Preamble
$>$ To develop familiarity with the physical concepts and facility with the mathematical methods of classical mechanics.
To represent the equations of motion for complicated mechanical systems using the Lagrangian and Hamiltonian formulation of classical mechanics.
To develop skills in formulating and solving physics problems

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :---: | :--- | :---: |
| CO1 | Demonstrate the knowledge of core principles in mechanics | K2 |
| $\mathbf{C O 2}$ | Interpret complex and difficult problems of classical dynamics in a systematic way | K3 |
| $\mathbf{C O 3}$ | Apply the variation principle for real physical situations | K4 |
| $\mathbf{C O 4}$ | Identify the existing symmetries and the corresponding integrals of motion and <br> analyze the qualitative nature of dynamics | K5 |
| $\mathbf{C O 5}$ | Explore problem solving skills (approach, estimation, computation, and analysis) <br> of classical mechanics in various contexts such as mechanical engineering, <br> astrophysics, and biophysics. | K6 |

## Syllabus

## CORE VIII - SEMESTER II - MECHANICS (MTH2008)

## UNIT I

Introductory concepts: Mechanical system - generalized coordinates - constraints - virtual work energy and momentum.

## UNIT II

Lagrange's equations: Derivations of Lagrange's equations - examples - integrals of motion.

## UNIT III

 ( 17 hrs )Hamilton's equations: Hamilton's principles - Hamilton's equations - other variational principles.

## UNIT IV

( 17 hrs )
Hamilton - Jacobi theory: Hamilton's principle function - Hamilton - Jacobi equation - Separability.

## UNIT V

Canonical transformations: Differential forms and generating functions - Lagrange and Poisson brackets.

## Preamble

$>$ The objective of this course is to introduce some fundamental concepts of control system including state space techniques, optimal control, stability analysis and controllability.
The course is intended to provide students with confidence in own abilities to analyze and design a new control system.

## Course Outcomes

Upon the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Describe the basic concepts and properties of differential equations, fundamental <br> concepts of control system | K2 |
| CO2 | Understand about concept of observable and controllable system. | K3 |
| CO3 | Ability to analyze and design a new control system. | K4 |
| CO4 | Analyze the system stability, equilibrium points, linear system stability | K5 |
| CO5 | Apply optimal control to statement of the optimal control problems and interpret the <br> problems | K6 |

## Syllabus

## ELECTIVE III - SEMESTER II - CONTROL THEORY (MTH20E3)

## Unit I

( 12 Hrs )
Observability: Linear systems - Observability Grammian - Constant coefficient systems Reconstruction Kernel - Nonlinear Systems.

## Unit II

(11 Hrs)
Controllability: Linear Systems - Controllability Grammian - Adjoint Systems - Constant coefficient systems - Steering function - Nonlinear systems.

## Unit III

(11 Hrs)
Stability: Stability - Uniform Stability - Asymptotic Stability of Linear Systems - Linear time varying systems - Perturbed linear systems- Nonlinear systems.

## Unit IV

 (11 Hrs)Stabilizability: Stabilization via linear feedback control - Bass method - Controllable subspace Stabilization with restricted feedback.

## Unit $V$

(11 Hrs)
Optimal Control: Linear time varying systems with quadratic performance criteria - Matrix Riccati equation - Linear time invariant systems - Nonlinear Systems.

## Syllabus

## ELECTIVE IV - SEMESTER II - STOCHASTIC PROCESSES (MTH20E4)

UNIT I
( 12 Hrs )
Elements of Stochastic Process: Review of basic terminology and Properties of random variables and distribution functions - Two simple examples of Stochastic Process - Classification of general Stochastic Process - Defining a Stochastic Process. Markov Chains : Definitions - Examples of Markov Chains - Transition probability matrices of a Markov Chains - Classification of states of Markov Chains - Recurrence - Examples of recurrent Markov Chains

UNIT II
(11 Hrs)
The Basic limit theorem of Markov Chains and Applications: Discrete renewal equations - Proof of Theorem 1.1-Absorption Probabilities - Criteria for recurrence - A Queueing example - Another Queueing model - Random walk. Classical examples of Continuous time Markov Chains : General pure Birth processes and Poisson processes - A counter model - Birth and Death processes - Differential equations of Birth and Death processes - Birth and Death processes with absorbing states - Finite state continuous time Markov Chains

UNIT III
(11 Hrs)
Renewal Processes: Definition of a Renewal process and related concepts - Some special renewal process and examples - Renewal equations and Elementary Renewal Theorem - Renewal theorem Applications of The Renewal theorem - Generalizations and variations on Renewal processes. Brownian Motions : Background material - Joint probabilities for Brownian Motions - Continuity of paths and the Maximum Variables - Variations and Extensions - Computing some functional of Brownian Motions by Martingale methods - Multi Dimensional Brownian Motions - Brownian paths

## UNIT IV

( 11 Hrs )
Branching Processes : Discrete Time Branching Processes - Generating function relations for Branching Processes - Extinction probabilities - Examples - Two type Branching Processes - Multi type Branching Processes - Continuous time Branching Processes - Extinction probabilities for Continuous time Branching Processes - Limit Theorems for Continuous time Branching Processes

## UNIT V

( 11 Hrs )
Stationary Processes: Definitions and Examples - Mean square distance - Mean square error prediction - Prediction of Covariance Stationary Processes - Ergodic Theory and Stationary Processes - Applications of Ergodic Theory

## Syllabus

## CORE IX - SEMESTER III - COMPLEX ANALYSIS (MTH1909)

## Unit I

(16 Hrs)
Introduction to the concept of analytic function: Limits and continuity - Analytic functionsPolynomials - Rational functions - Conformality: Arcs and closed Curves - Analytic functions in regions - Conformal Mapping - Length and Area - Linear Transformations: The Linear group The Cross-ratio - Elementary Riemann Surfaces.

## Unit II

(17 Hrs)
Complex integration: Line integrals Rectifiable Arcs - Line Integrals as Functions of ArcsCauchy's theorem for a rectangle - Cauchy's theorem in a disk - Cauchy's integral formula: The index of a point with respect to a closed curve - The integer formula - Higher derivatives Removable singularities - Taylor's Theorem - Zeros and Poles - The local mapping - The Maximum Principle - chains and cycles.

## Unit III

(17 Hrs)
The Calculus of Residues: The Residue theorem - The Argument principle - Evaluation of definite integrals - Harmonic functions: The Definitions and basic Properties - Mean value property - Poisson's Formula.

## Unit IV

(17 Hrs)
Series and Product Developments: Weierstrass theorem - The Taylor Series - The Laurent Series - Partial fractions and Factorization: Partial Fractions - Infinite Products - Canonical Products.

## Unit V

(19 Hrs)
The Riemann Mapping Theorem - Statement and Proof- Boundary Behavior - Use of the reflection principle - Analytic arcs - Conformal mapping of Polygons: The Behavior at an angle the Schwartz - Christoffel Formula - Mapping on a rectangle.

Syllabus

## CORE X - SEMESTER III - TOPOLOGY (MTH1910)

UnitI
( 18 Hrs )
Topological Spaces - Basis for a Topology - The Order Topology - Closed Sets and Limit Points - Continuous Functions - Product Topology - Metric Topology.

UnitII
( 17 Hrs )
Connectedness and Compactness: Connected Spaces - Connected sets in R -Components and Path Components - Local Connectedness - Compact Spaces - Limit Point Compactness - Local Compactness.

## UnitIII

(15 Hrs)
Countability and Separation Axioms: Countability Axioms - Separation Axioms Urysohn's Lemma - UrysohnMetrization Theorem.

UnitIV
(17 Hrs)
The Tychonoff Theorem - Completely Regular spaces - The Stone-CechCompactification.

## UnitV

(19 Hrs)
Complete Metric Spaces - Compactness in Metric Spaces - Point-wise and Compact Convergences - Ascoli's Theorem - Baire spaces.

# CORE XI - SEMESTER III - BASICS OF CRYPTOGRAPHY (MTH1911) 

## Unit I

(19 hrs)

Introduction to Information Security: Introduction, security, critical characteristics of information, NSTISSC security model, components of an information system, security components, Approaches to information security implementation. The system development life cycle, The Security System Development life cycle.The need for security: Business needs first, threats, attacks, secured software development.
Cryptography :Basic concepts of cryptography, Cryptograph tools. Authentication, Passwords, keys versus passwords, Attacking Systems via passwords, Password verification.

## Unit II

(19 hrs)
Classical Encryption Techniques; Symmetric cipher model, substitution techniques, Transposition Techniques. Block Ciphers and the Data Encryption Standard: Block cipher principles, the data encryption standard, the strength of DES.
Introduction to Number Theory: Prime Numbers, Fermat's and Euler's Theorem, Testing for primality, Miller-Rabin Algorithm. Chinese Remainder Theorem, Discrete Logarithms, Algorithms. (Except Problems)

## Unit III

( 18 hrs )
Public Key Cryptosystems : Principles of public, key cryptography, public, key cryptosystems, Applications for public ,key cryptosystems, Requirements for public , key cryptography, public, key cryptanalysis, RSA Algorithm, Description of the Algorithm, Computational Aspects, Security of RSA.
Key Management: Diffie - Hellman Key Exchange - Algorithm, Key exchange protocols, Elliptic Curve Arithmetic, Elliptic Curve cryptography. (Except Problems)

## Unit IV

( 15 hrs )
Digital Signatures and Authentication Protocols : Requirements, Direct Digital Signature, Arbitrated Digital Signature, Authentication Protocols, Mutual Authentication, One Way Authentication, Digital Signature Standard, DSS Approach and Digital Signature Algorithm (Except Problem)

## Unit V

( 15 hrs )
Virus: Viruses and Related threats, Virus Countermeasure
Fire Walls: Firewalls, Types of Firewall, Design Principles of Firewall, Trusted Systems.

Syllabus

## CORE XII - SEMESTER III - FLUID DYNAMICS (MTH1912)

Unit-I
( 16 hrs )
Introductory Notions - Velocity - Streamlines and path lines - Stream tubes and filaments - Fluid body - Density - Pressure - Differentiation following the fluid - Equation of continuity Boundary condition - Kinematical and physical - Rate of change of linear momentum - Equation of motion of an inviscid fluid.

## Unit-II

( 18 hrs )
Euler's momentum theorem - conservative forces - Bernoulli's theorem in steady motion - Energy equation for inviscid fluid - Circulation - Kelvin's theorem - Vortex motion - Helmholtz equation.

## Unit-III

(18 hrs)
Two dimensional motion - Two dimensional functions - Complex potential - basic singularities - Source and sink vortex - Doublet - circle theorem - flow past a circular cylinder with circulation - Conformal transformation-Blasius theorem-Lift force .

## Unit-IV

( 17 hrs )
Viscous flows - Navier-stokes equations - Vorticity and circulation in a viscous fluid Steady flow through an arbitrary cylinder under pressure - Steady couette flow between cylinders in relative motion - Steady flow between parallel planes.

## Unit-V

( 17 hrs )
Laminar boundary layer in incompressible flow - Boundary layer concept - boundary layer equations - displacement thickness - momentum thickness - kinetic energy thickness - integral equation of boundary layer - flow parallel to semi infinite flat plate - Blasius equation and its solution inseries.

## SEMESTER III - SPECIAL PAPER

## RESEARCH METHODOLOGY (MTH19S1)

Credits : 2
Total duration : $\mathbf{2 8} \mathrm{Hrs}$

## Objective

To motivate the students in Research Oriented Topics.
Unit I
(5 Hrs)
Research Methodology: An Introduction Meaning, Objectives, and Types of research, Research Process, Criteria of Good Research Interpretation and Report Writing Meaning of Interpretation, why Interpretation? Technique of Interpretation, Precaution of Interpretation, Significance of Report Writing, different steps in Writing report, Layout of the research Report, Types of Reports, Oral Presentation, Mechanics of writing a Research report, Precautions of Writing Research Reports

## Unit II

(6 Hrs)
Text, Symbols, and Commands: Command names and arguments -Environments Declarations - Lengths -Special characters -Fine-tuning text - Word division Document Layout and Organization: Document class - Page style - Parts of the document - Table of contents

## Unit III

(6 Hrs)
Displayed Text: Changing font - Centering and indenting - Lists - Generalized lists -- Theorem-like declarations - Tabulator stops - Boxes - Tables - Printing literal text Footnotes and marginal notes - Comments within text. Mathematical Formulas: Mathematical environments - Main elements of math mode - Mathematical symbols Additional elements - Fine-tuning mathematics

## Unit IV

PostScript and PDF : LATEX and PostScript - Portable Document Format Math Extensions with AMS-LATEX: Invoking AMS-LATEX - Standard features of AMSLATEX - Further AMS-LATEX packages - The AMS fonts

## Unit V

(5 Hrs)
Research Ethics and Responsible Conduct in Research: Brief history and analytical basis of research ethics, responsible conduct in research (Honesty in Science: Integrity, Authorship, Conflicts of Interest, Privacy and Confidentiality, Informed Consent, Risk/Benefit Assessment), The legal regulation of research ethics in India (From UGC, MHRD and other governing agencies), Regulatory requirements relevant to international research.

## ELECTIVE V - SEMESTER III - MATHEMATICAL MODELLING (MTH19E5)

## Unit-I

(11 hrs)
Mathematical Modeling through Systems of Ordinary differential Equations of the First Order : Mathematical modeling in population dynamics, *Mathematical modeling in Arms Race, Battles and international Trade in terms of systems of ordinary differential equations*Mathematical modeling in dynamics through systems of ordinary differential equations of first order.

## Unit-II

( 11 hrs )
Mathematical Modeling through difference equations: The need for Mathematical modeling through difference equations - Some simple models - Basic theory of linear difference equations with constant coefficients - Mathematical modeling through difference equations in economics and finance.

## Unit-III

(11 hrs)
Mathematical Modeling through difference equations (contd.): Mathematical modeling through difference equation in population dynamics and genetics - Mathematical modeling through difference equations in probability theory - Miscellaneous examples of mathematical modeling through difference equations.

## Unit-IV

(12 hrs)
Mathematical modeling through Graphs: Situations that can be modeled through graphs Mathematical models in terms of directed graphs - mathematical models in terms of signed graphs - Mathematical models in terms of weighted graphs.

## Unit-V

(11 hrs)
Mathematical Modeling through calculus of Variations and Dynamic Programming : Optimization principles and techniques - Mathematical modeling through calculus of variations Mathematical Modeling through dynamic programming.

## SEMESTER IV - ELECTIVE VI

## TENSOR ANALYSIS (MTH19E6)

## Unit I

Tensor theory: Scope of Tensor Analysis - transformation of coordinates - properties of admissible transformations of coordinates- transformation by invariance- transformation by covariance and contravariance - contravariant tensor -covariant tensor- tensor character of covariant and contravariant laws - algebra of tensors.

## Unit II

(11 Hrs)
Quotient law - symmetric and skew-symmetric tensors - relative tensors - the metric tensorthe fundamental and associated tensors.

Unit III
(11 Hrs)
Christoffel's symbols - transformation of Christoffel's symbols - covariant differentiation of tensors - Ricci's theorem.

Unit IV
(11 Hrs)
Riemann - Christoffel tensor - properties of Riemann-Christoffel tensors -Ricci tensor -Bianchi identitites -Einstein tensor.

## Unit V

(11 Hrs)
Riemannian and Euclidean spaces - existence theorem - the e-systems and the generalized Kroneckerdelats - application of the e-systems to determinants - tensor character of generalized Kronecker deltas.

## Syllabus

## CORE PAPER XIII - SEMESTER IV - FUNCTIONAL ANALYSIS (MTH1913)

## Unit I

(18 Hrs)
Banach spaces - The definition and some example - Continuous linear transformations The Hahn -Banach theorem - The natural imbedding of N in $\mathrm{N}^{* *}$ - The open mapping theorem The Closed graph theorem.

## Unit II

( 17 Hrs )
The conjugate of an operator - Hilbert spaces - Definition and some simple properties Orthogonal complements - Orthonormal sets.

## Unit III

(17 Hrs)
The Conjugate space $\mathrm{H}^{*}$ - The adjoint of an operator - Self adjoint operators - Normal and unitary operators - Projections.

Unit IV
Matrices - Determinants and the spectrum of an operator - The spectral theorem.

## Unit V

(18 Hrs)
The definition and some examples of Banach algebras - Regular and singular elements Topological divisors of zero - The spectrum - The formula for the spectral radius.

## Syllabus

## CORE PAPER XIV - SEMESTER IV - MATHEMATICAL METHODS (MTH1914)

## Unit-I

(17hrs)
Fourier transforms: Fourier sine and cosine transforms - Fourier transform of derivatives - Fourier transform of simple functions - Convolution integral - Parseval's Theorem - Solution of PDE by Fourier transforms - Laplace equation in half plane - Laplace equation in an infinite stripLaplace equation in semi infinite stripe - The Linear diffusion equation on a semi infinite line The two dimensional diffusion equation.

## Unit-II

(17 hrs)
Hankel Transforms: Properties of Hankel transforms - Hankel inversion theorem of derivatives of functions (proof is omitted) - The Parseval's relation - Relation between Fourier and Hankel transforms - Axisymmetric Dirichlet problem for a half space - Axisymmetric Dirichlet problem for a thick plate.

## Unit-III

( 15 hrs )
Integral equations: Type of integral equations - Integral Fredholm alternative - approximate Method - Equation with separable Kernel - Volterra integral equations - Fredholm’s theory Fredholm's First - second and third theorems.

## Unit-IV

(18hrs)
Applicationofintegralequationtoordinarydifferentialequation-Initialvalueproblems - Boundary value problems - Singular integral equations - Abel integral equation.

## Unit-V

Calculus of Variations: Variation and its properties - Euler's equation - Functionals of the integral form - Functional dependent on higher order derivatives - Functionals dependent on the Functions of several independent variable - Variational problems in parametric form Applications.

## ELECTIVE VII- SEMESTER IV

## MATHEMATICAL PROGRAMMING (MTH1915)

## Unit I:

(16 hrs)

Advanced Linear Programming -From Extreme points to Basic solutions - Generalized Simplex Tableau in matrix form - Development of the Optimality and Feasibility Conditions - Revised Simplex Algorithm - Matrix definition of dual problem- Optimal dual solution.

## Unit II :

(17 hrs)
Integer Programming - Integer Programming Algorithm -Cutting Plane Algorithm - Deterministic Dynamic Programming - Recursive nature of computations in D.P. - Forward and Backward recursion.

## Unit III:

( 18 hrs )

Simulation Modeling : Monte Carlo Simulation - Types of simulation - Sampling from probability distribution - Generation of random numbers.

## Unit IV:

(17 hrs)

Classical Optimization Theory - Unconstraint problems - Necessary and Sufficient Conditions The Newton - Raphson Method - Constrained problems - Equality constraints (Jacobi Method and Lagrangian method).

Unit V:
( 18 hrs )
Non-Linear Programming - Unconstrained algorithms - Direct Search Method - Gradient Method - Constraint algorithms - QuadraticProgramming.

## Preamble

$>$ Introduce the fundamental concepts of formal languages, grammars and automata theory.
> Identify different formal language classes and their relationships

## Prerequisite

> Knowledge in basic concepts of calculus and matrices

## Course Outcomes

On the successful completion of the course, students will be able to

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO 1 | understand basic concepts in Lattices , formal language and automata <br> theory | K 2 |
| CO 2 | demonstrate abstract models of computing, including <br> deterministic (DFA), non-deterministic (NFA), Push Down <br> Automata(PDA) | K 3 |
| CO 3 | relate practical problems to languages and automata | K 4 |
| CO 4 | Design grammars and recognizers for different formal languages <br> CO 5 | formalize the structure of a given formal language using regular <br> expressions and context - free grammars |

## ELECTIVE VII - SEMESTER IV FORMAL LANGUAGES AND AUTOMATA THEORY (MTH19E7)

## UNIT I

Lattices and Boolean Algebra: Lattices as Partially ordered sets - Boolean AlgebraBoolean Functions- Representation and Minimization of Boolean Functions.

UNIT II
(10 hrs)
Grammars and Languages: Discussion of Grammars - Formal Definition of a Language - Notions of Syntax Analysis.

## UNIT III

( 15 hrs )
Finite Automata, Regular Expressions and Languages: An Informal Picture of Finite Automata - Deterministic Finite Automata - Nondeterministic Finite Automata -An Application: Text Search - Finite Automata with ${ }^{\varepsilon}$ Transitions -Regular Expressions - Finite Automata and Regular Expressions - Applications of Regular Expressions - Algebraic Laws for Regular Expressions

## UNIT IV

( 15 hrs )
Properties of Regular Languages: Proving languages not to be Regular- Closure properties of Regular Languages- Decision Properties of Regular Languages- Equivalence and Minimization of Automata. Context - Free Grammars and Languages: Context - Free Grammars - Parse Trees - Applications of Context - Free Grammars - Ambiguity in Grammars and Languages.

## UNIT V

Pushdown Automata :Definition of the Pushdown Automaton - The Languages of a PDAEquivalence of PDA's and CFG's - Deterministic Pushdown Automata. Properties of Context Free Languages :Normal Forms for Context - Free Grammars - The Pumping Lemma for CFL's - Closure properties of CFL's - Decision properties of CFL's.

| NUMBER <br> MTH19E8 | DIFFERENTIAL GEOMETRY | THEORY | $\mathbf{7 1}$ | $\mathbf{4}$ | - | $\mathbf{3}$ |

Preamble
$>$ To introduce the notion of surfaces and their properties.
$>$ To study geodesics and differential geometry of surfaces.

## Course Outcomes

Upon the successful completion of the course students
Mapping with Course Outcomes

| CO <br> Number | CO Statement | Knowledge <br> Level |
| :--- | :--- | :---: |
| CO1 | Make clear and concise arguments involving basic notions and constructions of <br> 2-dimensional Riemannian geometry, curves and torsion. | K 2 |
| CO2 | Identification of important types of curves in surfaces, including principal curves, <br> asymptotic curves and geodesics. | K 3 |
| CO3 | Enumerate some standard examples in geometry, such as surfaces of constant <br> Gaussian curvature, compact and non -compact surfaces, and surfaces of <br> revolution. | K 4 |
| CO4 | Analyze Gaussian and mean curvatures using variety of methods including patch <br> computations, direct calculation of the shape operator | K 5 |
| CO5 | Articulate connections between geometry and other disciplines, possibly including <br> topology, algebra, analysis, or applied mathematics. | K 5 |

[^3]
# ELECTIVE VIII - SEMESTER IV DIFFERENTIAL GEOMETRY (MTH19E8) 

## UNITI

(14 Hrs)
Space Curves: Definition of a space curve - Arc length - tangent - normal and binormal curvature and torsion - contact between curves and surfaces- tangent surface- involutes and evolutes- Intrinsic equations - Fundamental Existence Theorem for space curves-Helics.

UNITII
(15Hrs)
Intrinsic Properties of a Surface: Definition of a surface - curves on a surface - Surface of revolution - Helicoids - Metric- Direction coefficients - families of curves- Isometric correspondence- Intrinsic properties

UNITIII
( 14 Hrs )
Geodesics: Geodesics - Canonical geodesic equations - Normal property of geodesics- Existence Theorems - Geodesic parallels - Geodesics curvature - Gauss- Bonnet Theorem - Gaussian curvature- surface of constant curvature.

## UNITIV

(14Hrs)
Non Intrinsic Properties of a Surface: The second fundamental form- Principal curvature - Lines of curvature - Developable - Developable associated with space curves and with curves on surface - Minimal surfaces - Ruled surfaces.

UNITV
( 14 Hrs )
Differential Geometry of Surfaces: Compact surfaces whose points are umblics- Hilbert's lemma

- Compact surface of constant curvature - Complete surface and their characterization - Hilbert's Theorem - Conjugate points on geodesics.

## ALC - SEMESTER IV

## ADVANCED COMPUTING TECHNIQUES (MTH1622)

## Unit I

Crisp sets - union and intersection of crisp sets - Fundamental properties of Crisp operations - Fuzzy sets - union and intersection of fuzzy sets - Fundamental properties of fuzzy operations.

## Unit II

Cryptographic Protocols - Cryptographic Techniques.

## Unit III

Cryptographic Algorithms - Mathematical Background - Data encryption Standard - other block ciphers.

## Unit IV

Automata and Regular expressions - Finite Automata - Kleene's theorem - derived languages.

## Unit V

Finite automata with output - Register machines.

S- Strong; M-Medium; L-Low

## ALC - SEMESTER IV <br> INTRODUCTION TO ALGORITHMS (MTH1623)

## UNIT I

Mathematical Foundations: Introduction- Growth of Functions- Asymptotic notation- Standard notations and common functions- Summations- Summation formulas and properties- Bounding Summations- Recurrences- The substitution method- The iteration method- The master methodProof of the master theorem.

## UNIT II

Sorting and Order Statistics: Introduction- Heapsort- Heaps- Maintaining the heap propertyBuilding a heap- The heapsort algorithm- Priority queues- Quicksort- Description of quicksortPerformance of quicksort- Randomized versions of quicksort-Analysis of quicksort.

## UNIT III

Data Structures: Introduction- Elementary data structures- Stacks and queues- Linked listsImplementing pointers and objects- Representing rooted trees- Hash Tables- Direct-address tableshash tables- Hash functions- Open addressing.

## UNIT IV

Binary Search Trees: What is a binary search tree?- Querying a binary search tree- Insertion and deletion- Randomly built binary search tree- Red-Black Trees- Properties of red-black trees-Rotations- Insertion- Deletion- Augmenting Data Structures- Dynamic order statistics- How to augment a data structure- Interval trees.

## UNIT V

Advanced Data Structures: B- Trees- Definition- Basic operations of B-Trees- Deleting a key from a B-tree- Binomial Heaps- Binomial trees and binomial heaps- Operations on binomial heapsFibonacci heaps- Structure of Fibonacci heaps- Mergeable-heap operations- Decreasing a key and deleting a node- Bounding the maximum degree.
